‡ At that early period, the opinion prevailed that the supply of cotton would soon exceed the demand. A highly respectable planter of St. John's, Colleton, deceased, in looking at his first crop, the produce of a few acres, after it had been housed, exclaimed, "Well, well, I am done with the cultivation of cotton! Here is enough to make *stockings* for all the people in America."

§ Mr. Seabrook, with the proceeds of the crops of the plantation, paid the purchase money in two years.

Charleston, or in Georgia, a considerable quantity was obtained in the Bahamas, through the active exertions of friends who resided in Providence.

"In 1780, when England had no fine manufactories, the best cottons brought to her market were from the Dutch plantations of Berbice, Demerara, and Surinam. These then commanded respectively 2s. 1d., 1s. 11d., to 2s. 1d., 2s. In 1786, Bourbon cotton,* remarkable for fineness, but deficient in length, was worth from 7s. 6d. to 10s. per pound. It was superseded by Sea Islands, which, in 1799, sold readily in Liverpool at 5s. to 5s. 3d. per pound. Its price in this state, in the infancy of its production, was generally from 9d. to 1s. It soon rose to 1s. 4d. and 1s. 6d.—then to 2s. and upwards,† at which it remained until 1806, when the planter, for the first time, experienced the baneful effect of restrictions on commerce. From the superiority of this cotton to that raised in any other country, even from the same seed, the staple at first was objected to, as too long, and by one or two English spinners, it is said, it was actually cut shorter.†

"On its introduction into Georgia, the cultivation of long cotton was confined to the warm high lands of the Sea Islands: these portions of the plantation are still everywhere preferred, and almost invariably return the largest yield, though their exhausted condition would seem to invite the more general tillage of the lower grounds.

"The method of cultivation was very various, and without method, until about the year 1802, when it assumed a regular form in Carolina and Georgia. Then the crop was worked four times—the latest hoeing being from the middle to the last of July. The hoeings now are more frequent, from five to seven being usually given, and are begun earlier, and finished sooner. The point appears to be conceded that, when the plant puts out fruit freely, which may be expected early in July, out-door labour should cease, especially if the season be wet.

"The plough was practically unknown to the first growers of long-staple cotton. This is still true, although a half century has elapsed. The ridge-system; the levelness of the ground, requiring, therefore, numerous drains; the small quantity of land, from three acres and a half to four acres, cultivated to the hand, which, from its lightness, is so easily and so much better attended with the hoe; and the impossibility of gathering the cotton as rapidly as the field may demand, if, with ploughs, the tillage embraced a larger number of acres—all seem to render the aid of this great agricultural implement utterly useless in the culture of the crop. In the breaking up of the soil, however, and, as an assistant, in forming the ridge, the plough is universally employed, except on the Sea Islands, where only, by a few planters, is its value, in the latter operation, fully acknowledged.

"The task in listing was formerly half an acre; in ridging, three-eighths of an acre; and in hoeing, half an acre. The present tasks are less, except in hoeing, which is the same. The beds are still changed as often as the same field is tilled. In Georgia, the attempt to make them so far permanent in low grounds as to continue for six or eight years, has, in a few instances, been successfully tried.‡ There is scarcely a doubt, from their

* Bourbon cotton was first imported into Manchester in 1783.

† From 1798 to 1809, both inclusive, a planter of this state sold his cotton in Charleston at the following prices:—

‡ "Twenty years ago," says Mr. Spalding, in a recent letter to the writer, "upon purchasing

depth of mould, and extreme richness in vegetable ingredients, that the experiment would succeed in the marsh lands of South Carolina. The application of this plan to poor soils is forbidden by the necessity of furnishing them annually with fertilising matter, which should be thoroughly incorporated with the earth.

"Encouraged by the anticipated results of experience, if not in every instance by the actual product of their fields, our fathers continued to cultivate the grounds which their sagacity first selected for the new crop. After several years of exhausting tillage, a radical change in their plan of operations, it was apparent, must soon take place. Unaccustomed to imbibe information from books concerning their vocation, the plain alternative of resorting to virgin soils was adopted. This, with regret and mortification be it said, is still the popular expedient, except where necessity, that kind and blessed encourager of the arts, forces the reluctant to another, and, as experience testifies, far more profitable scheme. The land which could be the most readily prepared, was invariably chosen—the best, requiring a large expenditure of labour, neglected. Only recently have the swamps of some of the parishes, and the immense tracts which lie along the line where the salt and fresh waters meet, arrested the notice of the cotton grower. These alone are capable of yielding an amount of cotton wool equal to the yearly exports of the state. Whether the enterprise of the agriculturists is adequate to the task of draining and embanking them, the future will develop. To those who have been engaged in this patriotic work, the encouragement for further trials, on a more extended scale, is great, if not decisive.

"Notwithstanding the woods everywhere, and the marshes, furnished an abundant store of suitable aliment, still, in his early efforts, the industry of the grower did not extend beyond the narrow limits of manuring his root potato field, comprehending the one-fourth of an acre to each labourer. There were no instruments to mow the salt grass, rakes for collecting leaves, nor carts especially designed to convey the vegetable offal to the cattle-pen. On Edisto Island, where the system of tillage is admitted to be good, and where, probably, as much enriching matter is distributed over the land as in any other part of the United States, there was, in 1822, not one plough or scythe; the largest plantations had not more than two or three carts, and the utility of oxen, in practice, was absolutely unknown. Now, a cart and mule, or a yoke of oxen, to every six workers, is common; labour-saving machines abound; and every acre of cotton, and generally of provisions, is provided with, what at least is supposed to be, a proper quantity of appropriate pabulum. This salutary reformation in the husbandry of this small section of the state was effected mainly by the establishment of an Agricultural Society in the year just alluded to. All that has been said in reference to Edisto, is applicable to most of the Sea Islands, and, in a more limited sense, to a majority of the parishes.

"In Carolina, it was not until about 1825, that manuring may be said to have been systematised. By the force of circumstances, the sea-board set the example,* which, though strongly urged by the slender return of their fields, is still apparently unheeded by many of the parishes and districts.

"Of all the fertilising materials for the black seed cotton, marsh mud is held in the highest estimation; not for the reason of its abundance and contiguity to plantations, but because, if the proper kinds † be judiciously used, it is the most profitable, and certain in its results. It contains more nutritive and other valuable properties than any other natural compound, and is specially adapted to light sandy soils.

"Salt mud, as a garden manure, was employed in South Carolina in 1801. Judge William Johnson states, that in that year he commenced his experiments with it, and, after repeated trials, arrived at the conclusion that it was a great meliorating agent. It is said, that as far back as 1797, the late General Vanderhorst was practically acquainted with its value. The merit of its discovery, however, as a fertiliser for cotton lands, seems to be due

some river-land opposite to Savannah, I adopted permanent ridges, planting a row of corn, and a row of cotton alternately; these ridges had stood nine years, when my son sold the plantation, giving, as I think, the best cotton and the best corn crops in Clatham county."

* In 1805, nearly all the materials, now used as manure, were then employed on the Sea Islands, though in a very limited way.

† That on which the tall marsh grows is greatly to be preferred to all other kinds.

to the late James King, of St. Paul's parish. By him it was freely used before the late war with Great Britain.

"As slovenly as was originally the tillage of the cotton plant, the preparation of its produce for market was much more so. It was, indeed, so badly cleaned, as to be deemed suitable only to the coarser fabrics. Up to about the year 1820, the gatherers took no especial pains to abstract the decayed leaves. The wool was sunned all day, and ginned frequently with the stained particles incorporated with it. These were removed in the process of moting, which was effected by women sitting on the floor, where it was beaten with twigs. During the operation of ginning, no bags or boxes received the cotton, and oftentimes large quantities were thrown together until the moters were prepared to examine them. In packing, an old iron axletree, or wooden pestle, the present instrument, was used. There were no re-inspectors of the cotton before it was deposited in the bag, in which the spinner would frequently find, in addition to a large supply of leaves and crushed seeds, potato skins, parts of old garments, and occasionally a jack-knife. With many, the cotton was ginned, moted, and packed in the same room. Very different indeed are the present processes, or rather the modes in which they are severally performed. Separate rooms for the seed and ginned cottons, as well as for the wool, which, after it is gathered, is never exposed to the sun, have long been considered necessary, in the sea-board parishes, to ensure the proper after-handling of the crop. There are required a room for the whipper, if one be employed, which extracts the dirt and imperfect filaments; another for the assorters, who, provided with boxes for their clean cotton, perform their work before a long table, covered with wire, or wooden slats, the eighth of an inch apart; a third for the moters, who also stand before a latticed table, and, as often as a handful of cotton is prepared, it is thrown into a wooden box, about three feet from the floor, and secured to the sides of the building immediately behind the moters respectively; a small room for the moted cotton, and one for the packer, usually adjoining it; and a house or room, proportioned to the force employed, for the ginners, in which are boxes for the seed cotton in the rear of the operators, and boxes under the machines for the ginned cotton. The houses are lined on the inside with planed boards, and the windows of the assorting and moting rooms, and the gin-house, are glazed. All these accommodations are now to be found on nearly every plantation on the Sea Islands and the adjacent country, and, it is said, in many of the upper parishes.

"The amount of labour expended in a day in preparing one bag of superfine cotton, of 300 lbs. weight, the produce of 1500 lbs. in the seed, is as follows, viz. :—

Dryer	1
Turner and feeder of the whipper	2
Assorters, fifty lbs. each,	30
Ginners, twenty-five lbs. each,	12
Moters, forty-three lbs. each,	7
Packer and re-inspector	2

Total . . . 54

"It will thus appear, that if the foot-gin be used in the ordinary way, which, with a few exceptions, is the invariable practice, fifty-four labourers, at an expense to the owner of twenty-seven dollars, estimating their services at fifty cents per day respectively, are necessary to the getting of one bag of cotton properly cleaned. When the gins are propelled by steam, six persons only, male or female, to feed them, are required. If the wool be separated from the seed by Eaves's improved gin, to which steam power is applied, the aid of three men will be needed. In all other respects the labour is the same.

"The cultivation and preparation of cotton, as described in these pages, is peculiarly applicable to the southern half only of the long staple region. In the northern portion, but especially in the Santee country, there are differences in each, which it is important should be briefly noticed. Five acres to the hand, of which generally only one-third is manured, are planted. The ridges are four feet from each other, and the plants stand from fifteen to twenty inches apart. In the culture of the crop, a machine of a triangular shape, called 'the sweep,' is used by a few as an assistant to the hoe. The morning after the cotton is gathered, according to the wonted usage, it is assorted by the pickers; but, con-

trary to the plan of the sea-board, not afterwards; unless one or two hands, who attend to the scaffold, may be said to perform that service. The task in moting is from twenty to twenty-five lbs. The material points of difference, then, in the handling of the crop, between the lower and upper parishes, or the former and Santee growers, consist in the processes of assorting and moting. The labour of the first is chiefly expended in cleaning the cotton in the seed; that of the other, after it is ginned. This, probably, arises from the characteristic features of the two staples. Unless great caution be exercised in the moting of fine cottons, the fibres will entangle, and the wool become lumpy and stringy. These results do not take place when the coarser qualities are cleaned in the ginned state.

"For the silky cottons produced on the Sea Islands of South Carolina, the planter is indebted to the botanical skill and laudable perseverance of Kinsey Burden, Sen., of St. John's, Colleton. An improvement in the texture of the wool engaged his earnest attention as early as 1804 or 1805. In one of those years, he raised from selected seed a 'pocket' of cotton, worth, in the English market, 'twenty-five cents per lb. more than any other cottons at any price.' From that time he laboured zealously in this new branch of his profession until 1826, when he sold his first full crop, sixty bags, at 110 cents per lb. The crop of the following year commanded 125 cents per lb. It is proper here to observe, that between 1821 and 1829, the average price of common long cotton was twenty-four cents, and of the superior kinds from thirty-five to sixty cents. Mr. Burden's discovery was held to be so valuable to the state, that he was induced to forward a memorial to the legislature, offering to sell his secret for 200,000 dollars; he resigning all his seed, except what was necessary for his own crop, and communicating the mode of perpetuating the silky properties of the new cotton fibre. The memorial, for reasons satisfactory to the applicant, was never presented.

"Cotton may appropriately be divided into three kinds: 1st, Herbaceous cotton; 2nd, shrub cotton; 3rd, tree cotton. The first is the most useful, and is cultivated in nearly every country congenial to the gossypium. It exists native at Aleppo, in Upper Egypt, Arabia, and in Senegal. Of the seven varieties of the shrub cotton, one or other grows spontaneously in the tropical regions of Asia, Africa, and America. In the latter continent, the hirsutum, or hairy (seeds greenish), and the Barbadosense, or Barbadoes cotton (a black seed), are indigenous. To the shrub species all the South American, and most of the West India cotton, which is long-stapled, is to be referred. The tree cotton, according to one authority, grows in India, China, Egypt, the interior and western coast of Africa, and in some parts of America; by another, it is a native of India, Egypt, and Arabia.

"Quatremere Disjoul, a prominent member of the Academy of Sciences of Paris, in speaking of the influence of climate on the texture and quality of cotton, advances the following hypothesis:—That the produce of the countries immediately under or nearest the equator, is to be considered the type of excellence, and is distinguished by its fine silky fibre, the depth and peculiarity of its colour, and the height and permanency of the plant. In proportion, he remarks, as we recede from the equator, these strongly marked characters disappear, the fibre becomes coarse, its colour perfect white, and, on the shores of the Mediterranean, we behold the lofty and flourishing tree of Hindostan, dwindled down into a stunted annual shrub. Of these broad and unqualified assertions, there is but one that rests on a tenable basis:—that the perennial plant of the equator becomes an annual in a higher latitude. The averment, that the finest and the deepest coloured cotton is the produce of the tropical countries, is reiterated on even higher authority.* This is false, as a general proposition, and only true concerning locations. The coarsest cottons known in commerce, except some from Peru, between 5 deg. and 15 deg. south, which are of a dark hue, and as coarse as the wool of sheep, are the Bengal, 24 deg. north, and the Surat, 21 deg. 10 min. north; the finest, and in all other respects the best, cottons are produced on the Sea Islands of South Carolina, 10 deg. beyond the Tropic of Cancer. To the latter, as well as those of the Isle of France, 20 deg. 9 min. south, Dacca, 23 deg. 55 min. north, and Egypt, about 30 deg. north, the cotton of Guiana, within 5 deg. of the equator, is decidedly inferior. The worst native cotton in the East grows in Java, 7 deg. south. The cottons of South America, in the hottest region, it is true, are of a better quality than

* "Rees' Encyclopædia;" article *Cotton*.

those of the Levant ; on the other hand, some of the West India kinds are lower in value than the green seed varieties of this country. These too, as is especially the case in our state, oft-times grow within a few miles of the long-staple cotton, and, in certain localities, side by side ; yet the best sorts of the latter are worth 800 per cent more than the best sorts of the former. So much for the effect of climate on the fibre of cotton, in opposition to the gradation of the French philosopher's system. With regard to the colour of cotton, the yellowish hue of which is indicative of fineness, climate has but an inconsiderable effect. The cottons on the coasts of South Carolina and Georgia are tinged, and some varieties deeply, with yellow ; while the inland districts of those states, and their more southern neighbours, as far as the Red river, produce cotton of great whiteness, and far inferior in strength and fineness. A portion of the West India cotton is of a cream colour ; and some from India is represented to have ' a slight tinge of Aurora.' The cottons of Bengal, Madras, and Surat, of Smyrna, Cyprus, Salonica, and all parts of the Levant, are distinguished by their want of colour ; this is also said of Siam, famous for its nankeen. The Dacca cotton is deeply coloured, and, although it is consumed in that province, and consequently unknown in commerce, still, from an examination of the muslin, denominated in hyperbolical language, ' webs of woven wind,' and ' which can hardly be felt when expanded,' it has been satisfactorily ascertained to be of a coarser fibre than the better qualities of our cottons, grown near the ocean. While one pound of that cotton, in a single thread, would extend to the distance only of 115 miles, two furlongs, and sixty yards, cotton yarn is spun in England, making 350 hanks to the lb. weight, each hank measuring 840 yards, and the whole forming a thread of 167 miles in length. Further, 420 hanks certainly, and, it is asserted, from 480 to 500 hanks, per lb., have been spun in Manchester with cotton from South Carolina ; thus yielding a thread from 197 to over 238 miles long.

" The valuable properties of cotton wool, in their relative order, are strength, fineness, length, evenness and freedom from knots and entanglements. The superiority of our Sea Island cotton over all other kinds, * is owing to their fibres being ' spiral springs, singularly adapted to the spinning process, readily entwining with, and sliding over, each other, during the formation of a thread, with an easy elastic force. The filaments of these cottons vary from one to two ' inches, and in breadth from 1-1500th to 1-3000th of an inch.'

" A short time after cotton, as a crop, had been successfully cultivated in Carolina, it was attacked, in Georgia, by the caterpillar, *noctua aylyna*, or cotton-moth, which made its appearance as early as 1793 ; seven years afterwards, in South Carolina. In 1804, the crops, which would have been devoured by them, were, with the enemy, effectually destroyed by the hurricane of that year. In 1825, the visit of the worm was renewed, and its ravages were universal and complete. In 1827, 1829, 1833, 1834, 1840, 1841, and 1843, the lower parishes generally, or particular locations, suffered greatly by its depredations.

" That the cotton-moth frequently survives the frosty season, is nearly certain. An examination of the neighbouring woods, especially after a mild winter, has often been successfully made for that purpose.

" The injury that has often been committed by the caterpillar is almost incredible. In one week they have denuded of its foliage every stalk in the largest field. The cotton plant of Guiana was very subject to the attack of the chenille, as the caterpillar is there called. In the Bahamas, between March and September, 1788, no less than 280 tons of cotton, on a moderate scale, were devoured by this worm. Among the causes of failure of the crop in that quarter, as ascertained by answers of the most intelligent and experienced planters to questions proposed by the House of Assembly, the most prominent is the destruction by the chenille. The same cause produced the abandonment of the gossypium culture in several of the West India islands.

" The attack of the caterpillar in Carolina is not annual. This of itself is satisfactory evidence, that the ' evolution of the larvæ, and the transformations and death

* Ten years ago, the difference between the staple of our Sea Island cotton, and that of Egypt, Brazil, and some of the West India sorts, was about twenty per cent in favour of the former. Owing to a more favourable climate, superior husbandry, and the raising of superfine qualities, the difference may now be estimated at from thirty to fifty per cent, and over, if the silkiest kinds be included.

of the insect, or the appearance and disappearance of the chenille, are regulated or influenced by particular states of the atmosphere; and probably, as close observers have remarked, by 'the phases or changes of the moon.' Every effort which the most scrutinising and active minds have hitherto suggested to prevent their propagation, or to render innoxious the career of these insatiable depredators, has utterly failed. From this consideration, added to their great tenacity of life and extraordinary fecundity, it is supposed that the ordinary means of effecting either of those desirable ends will never succeed. The caterpillar, after being plunged into spirits of turpentine, or corrosive sublimate, is as ready for his all-day meal, as though it had been immersed in pure water. If the section of the field in which the pupæ only are seen, be burnt, the progress of the worm, as experience testifies, will scarcely be impeded. Lime will quickly produce death, and so will oil rubbed on the abdomen, but how can these be used efficaciously on the larvæ, when from 500 to 1000 on a plant are not unfrequently seen? Or can the pupæ, reposing in their glutinous cells, be affected by any external application? In this way the planter reasons, and when the enemy appears, no means whatever are now employed to preserve the fruits of his labour."—*Mr. Seabrook on the Cultivation of Cotton.*

Mr. Townsend, of Carolina, adopted the following plan for destroying these insects:—

1. His people searched for and killed both the worm and the chrysalis of the first brood.

2. On the appearance of the second brood, he scattered corn over the field to invite the notice of the birds, and while they depredated on the worms on the tops of the stalks and their upper limbs, the turkeys destroyed the enemy on the lower branches.

3. When in the aurelia state, the negroes crushed them between their fingers.

4. Some patches of cotton, where the caterpillars were very thick, and the birds and turkeys could not get access to them, were destroyed.

5. The tops of the plants, and the ends of all the tender and luxuriant branches, where the eggs of the butterfly are usually deposited, were cut off.

"By these means, resolutely pursued, although at one time the prospect of checking the depredators was almost cheerless, not the slightest injury to the field was sustained.* As the reasons for the measures adopted by Mr. Townsend are, perhaps, apparent, it behoves the planter to reflect that, on the first visit of the caterpillars, while their number is few, they might be, if not entirely got rid of, materially lessened; that in the pupæ state they are easily detected, and, of course, as easily killed; and that while early and indefatigable exertions may be crowned with success, delay or tardiness in his operations will certainly be fatal.

"In Georgia, the attack of the red bug, a winged insect with a long proboscis, with which it pierces the green pods, extracting the juices of the seed, and leaving the capsules blighted and hard, and the cotton stained of a deep yellow or red colour, are coeval with that of the caterpillar. Although this insect is an occasional depredator in the fields of this state, yet no material loss has been sustained by it. This is, also, true of the *apata monachus*, a species of the scarable, the larvæ of which, eating with a revolving motion, penetrate to the wood and pith of the cotton stalk. Red bugs, that prey on the roots and leaves of cotton, usually early in May, though their appearance is not uncommon in April, are certainly becoming more destructive and extensive in their visits. By the latter, the growth of the plant is in general only checked; but the former,† by arresting the ascent and circulation of the sap, generates a disease, which, if it do not destroy, renders the plants comparatively barren. The grub or cut-worm, if the spring be cold, and east winds prevail, is a troublesome, but not a formidable, enemy. The blast or blight is now, perhaps,

* The experiment cost Mr. Townsend two acres and a half of cotton, about fifteen bushels of corn, and the work of all his people for about five days. This gentleman was roused to unusual action by the reflection, founded on analogical reasoning, that, of one moth of feeble wing and tender body, which a vigilant eye might discover and destroy, the progeny in six weeks amounted to at least 26,000,000 of worms.

† This is communicated to the planter through the sense of smell. When the chenille appears, a very flagrant odour issues from the field, which is not possessed by the worm itself, or the plant separately.

‡ Wherever salt is applied on the listing, at the rate of one pint to the task-row (105 feet), it is confidently believed, that the bug will not appear.

the most common of all the diseases to which cotton is liable. Its tendency is to check or destroy the vegetative powers of the plants. The causes of blast are threefold:—excess of vegetation, corresponding with plethora in animals; exhaustion of vegetation, terminating in a state similar to gangrene; and wetness at the roots. When the first takes place, the cotton is pronounced 'flaggy;' the appearance of the second is denominated 'canker,' of which there are two kinds: in one the plant is stripped of its fruit and foliage, except a few green buds on the top; in the other, the leaves wither—the stalks assume a dark hue, and the pods drop, save those nearly full grown, which become hard and black, though they produce cotton. In relation to the third cause, as long as the roots are saturated with water, the procreative energies of the plants are arrested, and all the fruit previously formed quickly disappear. While the manuring system, where judiciously practised, has almost effectually removed one cause, and the main one, arising from vegetative exhaustion,* it has palpably increased the plethoric habits of the plant, and multiplied the number of its diseases, most of which, there are good grounds for believing, is animal. It should, hence, be the paramount duty of the grower, unless an antidote, like salt for instance, be applied, to use sparingly those manures, which furnish a matrix for generating or nourishing the insect brood.

"It has been well said by a judicious observer, that, of all the productions to which labour is applicable, the cotton plant, more particularly the species grown on the Sea Islands, is the most precarious. In its first stage it is attacked by the grub; it is devoured by bugs in the second; and by caterpillars in the third: it is often withered by the wind in its infancy, and by the blight in maturer age; and when the grower, excited by all the causes which hope so kindly presents to his ardent imagination, is about to reap the golden harvest, an equinoctial gale, or a few saturating showers, deprive him at once of the fruits of his labours, and bid him to reassume the toils and vexations of his vocation. And here it may pertinently be added, that 'when the produce is raised, at an expense to the cultivator, which, perhaps, is not equalled in any other pursuit—an expense, too, that is permanent and certain, while the returns are more variable and fluctuating than any other—the selfish and grasping policy of man is oftentimes more destructive than even the anger of Omnipotence.'

"Apart from the suicidal legislation of the federal authorities, our planters have no cause for despondency. Every view of the subject, on the contrary, imperiously invites them to persevere. In confirmation of this assertion, there are two considerations, one of a general and the other of a local character, to which I would briefly invite your notice—the first showing, that better and cheaper cotton can be grown in this country than in any other section of the world; the other, that by a little more attention to the processes that succeed the gathering season, the disparity between the South Carolina planter and his more southern associates, in relation to the money value of their respective crops, would be considerably lessened. And, first, in reference to nearly every part of the globe where cotton is grown for European consumption and manufacture, it is undeniable, that while the production of the raw material in the United States is rapidly extending, in other countries, it is either stationary or diminishing. Secondly, although with regard to the amount of cotton per acre, South Carolina cannot compete with the Gulf states,† yet her planters, in consequence of this apparent misfortune, are enabled to send the wool to market greatly improved in value by a superior mode of hauling. One cent more per pound, occasioned by a better style of preparation, taking the crop of the last year as a basis, would yield to the growers over 900,000 dollars.

* Sometimes, on poor high land, assisted with any matter, salt-mud especially, that brings the plant rapidly to maturity, this disease will appear, if a drought be succeeded by heavy rains in August. To prevent this, do not use mud alone, but in connexion with some stimulating aliment. Such lands should not be planted until the last of April.

† While the production in the Gulf states has doubled itself for the eighteen years, from 1824 to 1841, inclusive; that of the southern Atlantic states for the same period has remained nearly stationary.

Actual average of the eighteen crops from 1824 to 1841:—

	First Six Years.	Second Six Years.	Third Six Years.
South Atlantic States	253,000 bales.	504,000 bales	1,030,000 bales.
Gulf States.....	433,000 "	522,000 "	529,000 "

"The American saw-gin, and the wonderful discoveries and inventions in England in the operations of carding, spinning,* and weaving cotton, gave birth to the cotton-husbandry in the United States. The application of steam to the propelling of the cotton-machinery, and for purposes of navigation; the improvements in ship building, which enable vessels that formerly carried only 900 lbs. to the ton of register, now to carry from 1500 to 2000 lbs. to the ton, separate from the skill and industry of the cultivator, have materially contributed to its unparalleled extension.

"In consequence of its abundance, and the facility with which it can be twisted into a thread, cotton is the cheapest of all the materials for clothing; and what, perhaps, is of scarcely less importance, it is in a high degree conducive to health. For these reasons, it is gradually supplanting flax, silk, and wool, as an article of wear, or forms a component part of all of them. From its exchangeable value, and constituting as it does more than one-half of our exports,† it has greatly accelerated the growth and flourishing condition of the plantation states; aided to build up the prosperity of their political associates, and added vastly to the wealth and greatness of the union. Nor has its benefits been confined to the North American republic. The enlargement of our cotton husbandry, by arousing the energies of the British artists, created many of those extraordinary mechanical improvements, which have essentially contributed to render England the most powerful nation of which history furnishes an example. The community of interests existing between that sea-girt isle and our highly favoured land, owes its strength and maintenance to the downy fleece of a long-neglected shrub, which, by the unexampled skill and ingenuity of the one, and the untiring industry and perseverance of the other, has become 'the wonder of agriculture in the United States, and the miracle of manufacture in Europe.' Without attempting to show the manifold blessings that cotton has conferred on the political and social condition of other nations, it may, perhaps, be only necessary to remark, that everywhere society feels its friendly and invigorating influence. All classes and occupations, though its culture and manufacture, on an extended theatre, are of modern date, already acknowledge, that the 'vegetable wool' is among the greatest gifts of God to His people.

"The grand revolution which has increased the production of cotton wool in this country over 5676 times in half a century, has been brought about not by governmental patronage and the influence of monopolies, but against the unceasing plunderings of the one, and the resistless and unrelenting fiat of the other. The history, indeed, of its pursuit affords so extraordinary a result from the isolated labours of its followers, and under circumstances so oppressive and discouraging, as that of the cotton grower of the United States. He sows, and endures the heat and burden of the day, but others riot in the harvest. A juster and nobler policy, it is hoped, will ere long direct the federal councils. England now pays to America 35,000,000 dollars per annum for a single product of our fields. *To keep her in this position is a task of easy accomplishment, if commerce be free, and the planter be released from the shackles of pernicious and unwarrantable enactments.* As an exporter of the main crop of both countries, Texas can never be the rival of the United States, unless the spirit that has so long swayed the constituted authorities of the latter shall unfortunately continue in the ascendant. Under the guidance of a patriotic home legislation, and international interests, these coterminous communities would constitute the region, which might abundantly supply the nations of the globe with its great staple commodity, and at a lower rate, too, than ever was done by the labour of man."—*Mr. Seabrook on the Cultivation of Cotton.*

In 1791, about 2,000,000 lbs. were grown in the United States—of which about 1,500,000 lbs. was the produce of South Carolina, and about 500,000 lbs. of Georgia.

In 1801, the cotton crop of the United States was about 40,000,000 lbs.—of which about

* "Of the inventions of the 'water frame' by Arkwright, the 'spinning jenny' by Hargreaves, and the 'mule jenny' by Samuel Crompton, the two first occurred a short time before the American Revolution—the last in 1779. 'Of the four great divisions of the globe,' remarks Mr. Baines, 'Europe was the last to receive the cotton manufacture, and England was among the last to engage in that branch of industry.'"

† "The total value of the exports of the produce of the United States, during the year, ending on the 30th of September, 1841, was 106,982,722 dollars. Of this, cotton furnished 54,330,341 dollars, or more than one-half. South Carolina, as her share, contributed 8,011,392 dollars."

20,000,000 lbs. was produced in South Carolina, about 10,000,000 lbs. in Georgia, about 5,000,000 lbs. in Virginia, about 4,000,000 lbs. in North Carolina, and about 1,000,000 lbs. in Tennessee.

In 1811, the crop of the United States was estimated at 80,000,000 lbs.—of which 40,000,000 lbs. in South Carolina, 20,000,000 lbs. in Georgia, 8,000,000 lbs. in Virginia, 7,000,000 lbs. in North Carolina, 3,000,000 lbs. in Tennessee, and 2,000,000 lbs. in Louisiana.

In 1821, the produce of the several cotton growing states was distributed as follows,—South Carolina, 50,000,000 lbs., Georgia, 45,000,000 lbs., Tennessee, 20,000,000 lbs., Alabama, 20,000,000 lbs., Virginia, 12,000,000 lbs., North Carolina, 10,000,000 lbs., Louisiana, 10,000,000 lbs., and Mississippi 10,000,000 lbs. Total crop about 170,000,000 lbs.

In 1826, the total produce of cotton in the United States was about 348,500,000 lbs. Georgia produced 75,000,000 lbs., South Carolina 70,000,000 lbs., Tennessee 45,000,000 lbs., Alabama 45,000,000 lbs., Louisiana 38,000,000 lbs., Mississippi 20,000,000 lbs., Virginia 25,000,000 lbs., North Carolina 10,000,000 lbs., Florida 2,000,000 lbs., and Arkansas 500,000 lbs.

In 1833, the cotton crop of the United States increased to about 437,750,000 lbs.: viz., Georgia 88,000,000 lbs., South Carolina 73,000,000 lbs., Mississippi 70,000,000 lbs., Alabama 65,000,000 lbs., Louisiana 55,000,000 lbs., Tennessee 50,000,000 lbs., Florida 15,000,000 lbs., Virginia 13,000,000 lbs., North Carolina 10,000,000 lbs., and Arkansas 750,000 lbs.

In 1834, the crop increased to 467,500,000 lbs.: viz., Mississippi, 85,000,000 lbs.; Alabama, 85,000,000 lbs.; Georgia, 75,000,000 lbs.; South Carolina, 65,500,000 lbs.; Louisiana, 62,000,000 lbs.; Tennessee, 45,000,000 lbs.; Florida, 20,000,000 lbs.; Virginia, 10,000,000 lbs.; North Carolina, 9,500,000 lbs.; and Arkansas, 500,000 lbs.

By a report of the secretary of the treasury to congress, compiled from the returns of the weight and value of cotton cleared at all the custom-houses of the United States, the average prices of cotton were as follows:—

1791 to 1800, average price was 33 cts.;	highest average, 44 cts. in 1799,	lowest average 23 cts. in 1793.
1801 to 1810, " 22 "	44 " in 1801, "	16 " in 1810.
1811 to 1820, " 20½ "	34 " in 1818, "	10½ " in 1812.
1821 to 1835, " 12½ "	21 " in 1825, "	9½ " in 1831.

* From 1784 to 1790 inclusive, the number of bags exported was respectively 8, 14, 6, 109 389, 842, 81, which are estimated as weighing 150 lbs. each.

† Some foreign cottons included.

‡ The bags from 1833 to 1842, inclusive, are estimated to weigh 330 lbs. each.

§ For the nine months ending the 30th of June.

(EARLY IMPORTS OF AMERICAN COTTON, FROM THE UNITED STATES
INTO ENGLAND.

The first arrival of cotton-wool, the produce of the United States of America, took place at Liverpool, on the 20th of January, 1785, of one bag, per Diana from Charleston.

An account of the import of the first cotton brought to the port of Liverpool, the growth of the United States of America, 1785. January 20th, Diana from Charleston, one bag; February 17th, Tonym, New York, one bag; July 21st, Grange, Philadelphia, three bags; November 17th, Friendship, Philadelphia, nine bags. Total, fourteen bags.

1786.—May 4th, Thomas from Charleston, two bags; June 21st, Juno, Charleston, four bags. Total, six bags.

1787.—April 5th, John from Philadelphia, six bags; June 7th, Irish Volunteer, Charleston, one bag; June 14th, Wilson, New York, nine bags; June 28th, Grange, Philadelphia, six bags; James Appleton, two bags; August 2nd, Henderson, Charleston, forty bags; December 13th, John, Philadelphia, George Goring, thirty-seven bags; Order, seven bags. Total, 108 bags.

Total import of cotton into Liverpool during the six years from 1785 to 1790, inclusive, was 1441 bags. Though the above statement shows a progressive increase, it appears that the demand was neither uniform nor extensive, the import, in 1789, having exceeded that of the following year 731 bags. From this period, however, the trade, especially as regards Liverpool, has increased with astonishing rapidity.

(For further information relative to cotton, see hereafter Cotton Trade of the United Kingdom and of Europe generally.)

GROWTH OF SILK.

The mulberry and silkworm were introduced into Virginia, South Carolina, and Georgia, about the middle of the eighteenth century. Dr. Franklin and others made successful experiments in Pennsylvania in rearing silkworms. At a public flature in Savannah, Georgia, the following deliveries of native cocoons were made: 1052 lbs. in 1757, and during each of the three following years, 7040 lbs., 10,000 lbs., and 15,000 lbs. By referring to the general table of products of agriculture in 1840, it will appear that the total weight of silk cocoons produced amounted to 61,552 lbs.; and an increased trade in mulberry trees has been carried on, with various success, for some years. Bounties have been granted by the state legislature, silk journals published, speculations for growing mulberries and raising silkworms, and "the *Multicaulis* speculation," *par excellence*, became a mania, until the disastrous stoppage of the banks in 1839,

proved nearly ruinous to the rearing of mulberry plants. Most of the silk companies then in existence were ruined; notwithstanding bounties and *state protection*.

Since 1840, the culture of silk appears to have recovered itself. The soil of the United States is extensively and well adapted for growing the mulberry; and the climate, notwithstanding its variable character, is sufficiently favourable for rearing the silk worm. The silk produced is of superior quality.

The following extracts from Mr. Ellsworth's Official Reports for 1842, 1843, and 1844, and from statements in *Hunt's Merchants' Magazine*, embrace all that we can state relative to the silk culture of the United States.

"Notwithstanding," says Mr. Ellsworth, "the disappointment of many who, since the year 1839, engaged in the culture of the *morus multicaulis* and other varieties of the mulberry, and the raising of silkworms, there has been, on the whole, a steady increase in the attention devoted to this branch of industry. This may be, in part, attributed to the ease of cultivation, both as to time and labour required, and in no small degree, also, to the fact that, in twelve of the states, a special bounty is paid for the production of cocoons, or of the raw silk. Several of these promise much hereafter in this product, if reliance can be placed on the estimates given in the various journals more particularly devoted to the record of the production of silk. There seems, at least, no ground for abandoning the enterprise, so successfully begun, of aiming to supply our home consumption with this important article of our imports. In Massachusetts, Connecticut, New York, Pennsylvania, Delaware, Tennessee, and Ohio, there has been quite an increase above the amount of 1839. The quantity of raw silk manufactured in this country the past year is estimated at more than 30,000 lbs. The machinery possessed for reeling, spinning, and weaving silk, in the production of ribbons, vestings, damask, &c., admit of its being carried to great perfection, as may be seen by the beautiful specimens of various kinds deposited in the National Gallery at the Patent Office. The climate of our country, from its southern border even up to 44 deg. of north latitude, is suited to the culture of silk. It needs only a rational and unflinching devotion to this object, to place our country soon among the greatest silk producing countries of the world."—*Report for 1842*.

"During the past year (1842) the silk business in this country has been steadily advancing. A greater interest is evidently felt in the subject; and the evidence is decisive, that it needs only patient perseverance to accomplish greater things than its warmest advocates have ventured to hope for. A well represented national convention on the subject was held at New York in October last, at the time of the fair of the American Institute, by the direction of which a great number of letters and communications from persons engaged in the business in all parts of the United States have been published in a pamphlet called 'The Silk Question settled.' The statements contained in this publication furnish the most complete view of the condition of the business of cultivation of the mulberry, raising and feeding worms, and the manufacture of silk, with the methods best adapted to success, that has before been presented to the public. Twelve states were represented by the appearance of a delegation in person, and communications were received also from the residents of eight more. From the various other information, as well as from this publication, it is evident that there has been an increase of attention to this crop all over the United States. In New England it does not probably equal that of some other sections of the country. Some scattered notices may help in estimating the crop of the first year; but much reliance will be placed on the publication just mentioned, and we shall endeavour to condense some of the important results and conclusions on account of their eminently practical bearing and utility. The greatest increase in the crop seems to have taken place at the west. The states of Ohio, Tennessee and Indiana, have several enterprising men whose influence has been felt in urging forward this business, and the advantage is most encouraging. It is very difficult to fix on any ratio, and the estimated crop in the general tables of products for 1843 will probably, in many cases, fall far below the actual progress, but there is sufficient to show that there is a steady increase from year to year. In the New England states, Connecticut and Massachusetts stand foremost in their

attention to silk. In Connecticut, the effect of the exertions of some ardent friends of the cause, previous to the revolutionary war and just about the close of the last century, is still felt; and several establishments, especially in the town of Mansfield and vicinity, show what might have been done through the whole country had the same perseverance been manifested, in spite of early discouragements, and the same willingness to be contented with moderate profits. The experience of that little town warrants the belief that is expressed by some of its inhabitants that 'the time is not far distant when we, as a country, shall raise our own silk and manufacture it, and ultimately compete with foreign nations.' From Massachusetts we learn 'that the country has taken hold of it in earnest; each year, for some years, has doubled on the preceding. Last year (1842) 400 or 500 were engaged in that business in Massachusetts, and more than double that number in New England.' Several establishments for its manufacture are found in this state in successful operation. In parts of Vermont, there are also individuals who are devoting considerable attention to the production of silk; but, as the climate is so much colder here, and in Maine and New Hampshire, than in any other New England states, they are less favourably situated for the business. It is, however, increasing; and, among other things on this subject, it is stated that several thousand dollars' worth of the eggs of the silkworm have been sent to the West Indies. *There is a bounty given by the state government.*

"At the fair of the New York State Agricultural Society, the crop of nineteen persons in a single district of the country was 2150 lbs. In Monroe county, the quantity offered for the state bounty was said to be 2256 lbs.; the year before, it was 1695 lbs.; in 1841, 1539 lbs.

There are two or three establishments for the manufacture of silk in New Jersey, and for some time there was formerly published a paper relating to this subject in this state.

"Pennsylvania formerly gave a bounty on the production of cocoons or silk; but the law has been repealed. This has excited some unfavourable influence, and probably prevented the progress of the crop as much in this large state, as would have been the case had the encouragement been continued. The following statement shows what has been the progress of the silk culture at '*Economy*,' in five years, commencing in 1838:—

Years.	No. of lbs. of cocoons.
1838	1,400
1839	1,800
1840	2,400
1841	4,400
1842	5,500
<hr/>	
Total in five years	15,500

"The largest crop raised at one establishment in Europe, 200 years after the culture of silk was introduced, it is said was 3000 lbs.

"In Maryland are some ardent friends of this object; and though some have been unsuccessful in past years, in respect to the *multicaulis*, yet the belief is expressed that the silk business is yet destined to do well.

"For the southern states this business of silk culture is admirably adapted, and yet comparatively little has been done with regard to it there. On this subject we have the opinion of some residents in that part of the country. One of them writes thus: 'The great difficulty in all matters of improvement in the south is, it is too small a business—too much trouble, or too long to get the return. My own opinion is, that it is to us of the south the greatest business that has ever presented itself. An old negro, competent to feed young children or chickens, with the aid of a few small chaps from four to eight years of age, can make as much as grown hands can in the field, and this without any expense of gin-house and machinery.' 'It seems to me a business peculiarly appropriate for the south. We can commence feeding on the 20th of April (this year on the 16th, last year on the 24th). We can feed without taking our field hands, or any extra building; and what is done thus is entire gain.' In Georgia, we are informed to this effect:

'One . . . has made thirty yards of beautiful silk, and made it up into ladies' dresses, and it is not inferior to the best French or English in appearance.' One of the members of congress from this state also informs us that he has a suit of silk of the manufacture in South Carolina. An experiment is mentioned as commenced in Louisiana, at Baton Rouge, by a gentleman from France, which seems to promise success. The amount of silk cocoons the past year in Tennessee, is estimated by one concerned in the manufacture, at from 20,000 lbs. to 25,000 lbs. In 1840, it is said, there were raised in that state but 1237 lbs. A fine manufactory here, under the superintendence of an experienced silk weaver from London, is said to have produced splendid specimens of satin. It is also said that 100 hands could now be employed in manufacturing the quantity of cocoons produced; and the opinion is expressed that, 'ultimately, no other business will equal it.' Governor Jones, of that state, has been presented with a full suit of domestic silk, by the silk-growers there, in acknowledgment of his efficient services to the cause of American industry.

"In Kentucky we notice, in one of the journals, that 500 skeins of beautiful sewing silk have been manufactured in one family; and it is evident that the attention to it is greater than formerly.

"Ohio has one of the finest establishments in the country, which manufactures 1000 bushels of cocoons annually, with a capital of 10,000 dollars, and employing from forty to fifty hands. The amount of cocoons produced in the Ohio valley is estimated 'at least sufficient to keep 200 reels in operation.'

"Much attention, likewise, is paid to the silk business in Indiana; and the success experienced justifies the expectation that the culture of silk will hereafter become a great business there.

"In Michigan, Mississippi, and Wisconsin, also, by the accounts given, the attention is more directed to this crop than heretofore.

"The whole crop of 1842, is estimated at 315,965 lbs. of cocoons.

"The resolutions passed by the convention at New York on the subject, express the strongest confidence in the prospects of the silk culture."—*Report for 1843 and 1844.*

"The estimated crop of silk for 1844, is 396,790 lbs. of cocoons."

HEMP AND FLAX.

Our information relative to the cultivation of hemp and flax is confined nearly altogether to the official tables for 1840, and to Mr. Ellsworth's reports:—

"Hemp is beginning to be raised somewhat more in the northern and eastern states. This is true especially of the northern part of the state of New York. At present, however, it is confined to the seed crop, owing to the high price of the seed. It is affirmed to be a mistake to suppose that it must be confined to alluvial lands, as has been shown by the farmers of Saratoga and Washington counties, in the state of New York. When planted in drills, at a suitable distance, as it should be, and properly cultivated, hemp generally produces, it is said, from twenty to forty bushels of seed to the acre; and instances are not rare of its yielding from fifty to sixty bushels. The seed is generally worth from three to six dollars per bushel. When sown for the lint, it should be sown broadcast, from two to three bushels of seed to the acre, depending on the quality of the land; and it usually produces from 700 to 1000 weight of clean hemp to the acre."—*Report for 1841.*

"In the state of New York, the crop has advanced. This is partly owing to the fact that the farmers of Seneca, and some other counties, have been induced by the proprietors of two oil-mills to sow about 1000 acres of flax for the seed; the yield is said to be from ten to fifteen bushels per acre. The increase is thought to be as high as fifteen or twenty per cent. In New Jersey, the falling off of the flax crop was 'from fifty to seventy-five per cent,' and it is said to have been 'almost an entire failure.' In the other middle and southern states, generally, there was an advance on the crop of 1842, of from five to ten per cent.

"In Mississippi, the cultivation of hemp is said to be increasing. The product raised is about one-half a ton to the acre; whereas, in Kentucky, 800 lbs. is esteemed a good crop. One planter, who, in 1842, raised three acres, intended to put in fifteen acres for

1843. Still the crop for the past year is said to have been short, compared to what it might have been, had the season been more favourable. The hemp crop of Tennessee was, probably, a small increase above that of 1842, perhaps five per cent. Kentucky is considered foremost in its crop of hemp. The accounts respecting its production for the past year in this state represent it as in some parts a medium crop, selling for three dollars to four dollars per 100 lbs. In other sections, it is thought to have been not an average crop, and 'one-third less than in 1842,' principally owing to the heavy rains and hail-storms in the spring; the decrease from these causes is estimated to have been as much as fifteen per cent. In Ohio, the crop of flax and hemp is considered to have advanced ten per cent. From some parts, the information received placed it as high 'as twenty per cent;' while, in others, it was reckoned 'about the same as in 1842.' More is said to be raised for seed than for lint. In Indiana the accounts vary; the flax in the south-eastern part of the state is pronounced to have been 'a good crop;' while, on the western side of the state, near the Wabash, both flax and hemp failed. In the south-western section, it is thought to have been 'twenty per cent more,' and in the north-western, 'twenty-five per cent short, owing to the drought.' Not a great deal of either flax or hemp is grown in Illinois; in some parts, the crop was 'an average one;' 'a fair crop;' 'good.' In other sections of the state, however, the information is more unfavourable. Our informant says, 'Recently much attention has been bestowed on the raising of hemp. No part of the United States is superior to Illinois for this production. I was born and educated in the best hemp county in Kentucky, and I am satisfied the same number of hands can tend more hemp in Illinois, and prepare it for market, than in Kentucky. The hemp is now transported chiefly to St. Louis; but manufacturing establishments are now beginning in Illinois, which will consume a portion of what is raised in that state. Should a machine be found which will answer the purpose of breaking the hemp cheaper than it can be done by hand, Illinois will soon raise more hemp than any other state in the union.' The crop of hemp in Missouri, though not as large as might have been hoped for, has somewhat gained on the previous year. In a public journal, in September, we find the following notice:—'The hemp crops in this section of the state are proving to be much better than was anticipated some time since; many crops, since cutting, have been found to be nearly, if not quite, as good as they were last year. The crops in the prairies are, to some extent, a failure; but, in the rich timbered lands, they may be considered good.' In some parts of Michigan, there was more flax sown than before—even double that of last year—and the crop was good; but in others it fell short, owing to the dry cold weather in June; probably there was, on an average, a small increase. In Wisconsin, it was an average crop; while, in Iowa, it is said to have been uncommonly good, and has been estimated at an increase of twenty-five per cent, which seems too high; the whole average may have been ten per cent.

"A species of flax is mentioned as growing in the territory of Oregon, which is described as resembling the common flax in every thing, except that it is perennial. The natives are said to use it in making fishing-nets. The roots are too large, and run too deep, to be pulled like the common flax, but fields of it might be mowed like grass; and, if found to succeed, it might be raised without continual cultivation. Perhaps it may be worthy a trial to introduce it among us.

"A variety of hemp, also, which is indigenous, called the Indian hemp, is described in a scientific journal in 1826. It is said to grow profusely on our low lands. Its blossoms, like those of the silk weed, are purple, and the pods contain a quantity of silk, though less than the silk weed; but the coat of its stem is far superior in strength to the hemp. The gentleman who communicated an account of it to the New York Society for the Promotion of Useful Arts, in 1810, observes:—'I caused to be water-rotted a considerable quantity in 1804, and obtained an excellent hemp, as white as snow, remarkable for its strength, which proved to be double that of common hemp. I have been informed, that the Indians who formerly inhabited the land where my plantation is situated, on the east bank of the Hudson river, made great use of this plant; and, not many years ago, were still in the habit of coming from the distant place, where they now dwell, to collect it. Several of my oldest neighbours have assured me that the ropes and yarn which they made from the fibres of that plant, were far superior, for strength and durability, to those made of flax and hemp.'

"The plant, being perennial, could be cultivated and multiplied to the greatest advantage; and, being more natural to low and overflowed lands, could render productive certain pieces of ground which are now wholly unprofitable. It is further said to grow common in every section of the United States—'along water-courses, ditches, and borders of cultivated fields, flourishing best where agricultural operations have disturbed the soil;' and to grow 'from two feet to six feet high, the stem straight and bare, of a greenish red;' and the writer who mentions it in a western agricultural journal, says, also, 'I have never seen it grow with such luxuriance in any region as on our bottom prairies.'

"Bologna hemp is cultivated to a considerable extent in Kentucky. It is more easily broken than common hemp, is of a white colour, finer, and stronger. The trials which have been made of American hemp, as compared with Russian hemp, are said to have resulted very favourably for that raised in this country. The great difficulty experienced, still, is in a suitable process of water-rotting, to render it adapted to the purpose of the manufacturer.

"The Louisville Journal states, that 14,000 tons of hemp were produced in Kentucky the past year. From this it required 8500 tons to supply her factories, which manufactured 6,500,000 yards of bagging, and 7,000,000 lbs. of bale rope, sufficient to rope and cover 1,100,000 bales of cotton. This leaves Kentucky 5500 tons of hemp for exportation, which, if properly rotted, would bring 190 dollars to 200 dollars per ton.

"The number of square yards of canvass for our navy is calculated at 369,431. All this is now said to be made of American materials, but the cordage is still made principally from Russian hemp.

"Estimated crop of hemp, in the United States, for 1844, is 22,800 tons.

"Flax was once an article of considerable export, and now may be again raised profitably for the seed. In the year 1770, the quantity of seed exported amounted to 312,000 bushels. For twenty-two years previous to 1816, the average annual export was about 250,000 bushels. The reason why less attention is paid to the culture of flax now is, that it is so exhausting a crop. By a rotation of crops, however, this difficulty, it is presumed, might be in a great measure avoided. The smooth rich prairies of the west afford an excellent opportunity for raising flax to any extent; and, since linseed is an article which bears exportation so well, many thousand acres might be cultivated to advantage, especially as the crop may be either pulled by machinery, or, if seed is the only object, it may be cut with like facility."—*Reports for 1842 and 1844.*

"Mr. Parker, in his narrative of his journey across the Rocky Mountains, from the Mississippi to the Pacific, says, 'Flax is a spontaneous production of this country. In every thing, except that it is perennial, it resembles the flax that is cultivated in the United States—the stalk, the bowl, the seed, the blue flower, closed in the day time and open in the evening and morning. The Indians use it in making fishing-nets. Fields of this flax might be managed by the husbandman in the same manner as meadows for hay. It would need to be mowed like grass; for the roots are too large, and run too deep in the earth, to be pulled as ours are; and an advantage that this would have is, that there would be a saving of ploughing and sowing.' This was on a branch of Lewis or Snake river, of the Columbia.

"In a late journal of a passage across these mountains by Mr. Oakley, of Illinois, under date of the 21st of July, 1839, occurs the following: 'Encamped to-night in a beautiful valley, called Bayou Selard, twenty-eight miles from the head of the south fork of the Platte. It is a level prairie, thirty miles long and three wide, and was covered with a thick growth of flax, which every year springs up spontaneously.'"

CHAPTER VIII.

FISHERIES OF BRITISH AMERICA.

THE fisheries of North America have long been eminently important, in regard to the maritime power of the United Kingdom, and of some other nations, as well as to trade and navigation.

The *great bank of Newfoundland*, which has been so long, and so famously resorted to by the English, Biscayans, and French, for the fishing of cod, is the most extensive sub-marine elevation yet discovered. Various theories and conjectures have been hazarded in order to account for its formation; some believe it was formerly an immense island, which had sunk in consequence of its pillars, or foundation, having been loosened by an earthquake. Others, that it has been created by the gradual accumulation of sand, carried along by the gulf stream, and arrested and lodged, on meeting with the currents of the north. It is, in some places, five degrees, or about 200 miles broad, and about 600 miles in length. The soundings on it are from twenty-five to ninety-five fathoms. The whole appears to be a mass of solid rock, formed like the other great inequalities of the globe. Its edges are abrupt, and deepen suddenly from twenty-five to ninety-five fathoms. In one place, laid down as rough fishing-ground, the soundings are only from ten to twenty fathoms. The Cape race, or Virgin rocks, near the inner edge of this bank, have lately been surveyed by one of her majesty's ships, and their position laid down correctly. These have always been considered dangerous, though seldom seen; and, although there is about four fathoms on the shoalest, yet, during a heavy sea, it is probable that a ship would be immediately dashed to pieces on them.

The best fishing-grounds on this bank, are between the latitudes of 42 deg. and 46 deg. north. The outer bank, or Flemish cap, appears to be a continuation of the grand bank, at a lower elevation. The soundings between them for about 100 miles, are from 120 to 218 fathoms.

The outer bank lies within the longitudes of 44 deg. 15 min., and 45 deg. 25 min. west; and the latitudes of 44 deg. 10 min., and 47 deg. 30 min. north. The soundings on it are from 100 to 160 fathoms. From the great bank to Nova Scotia, a continuation of banks succeed.

Fishes of various kinds are caught on all the American shores, lakes, and rivers, for the consumption of the inhabitants; but we shall confine our statements to the fisheries, and the fishing-grounds, which afford useful sources of employment to ships, boats, seamen, fishermen, and on shore to curers.

The cod fishery on the banks of Newfoundland, and along the coasts of North America, commenced a few years after its discovery. In 1517, mention is made of the first English ship which had been at Newfoundland; where, at the same

time, fifty Spanish, French, and Portuguese ships were fishing. The French, in 1536, were extensively engaged in this fishery; and we find that in 1578, there were employed in it; by Spain, 100 ships, by Portugal, fifty ships, and by England, only fifteen ships.* The cause of the English having, at this period, so few ships in this branch of trade, was the fishery carried on by them at Iceland. The English ships, however, from this period, were considered the largest and best vessels, and soon became, and continued to be, the admirals. The Biscayans had, about the same time, from twenty to thirty vessels in the whale fishery at Newfoundland; and some English ships, in 1593, made a voyage in quest of whales and morses (walrus), to Cape Breton, where they found the wreck of a Biscay ship, and 800 whale fins. England had, in 1615, at Newfoundland, 250 ships, and the French, Biscayans, and Portuguese, 400 ships.†

From this period the fisheries carried on by England became of great national consideration. De Witt observes, "that the English navy became formidable by the discovery of the inexpressibly rich fishing bank of Newfoundland." In 1626, the French possessed themselves of, and settled at, Placentia; and that nation always viewed the English at that fishery with the greatest jealousy; but still the value of those fisheries to England was fully appreciated, as appears by the various acts of parliament passed, as well as different regulations adopted for their protection.‡ Ships of war were sent out to convoy the fishing vessels, and to protect them on the coast; and many of the ships engaged in the Newfoundland fisheries, as far back as 1676, carried about twenty guns, eighteen small boats, and from ninety to 100 men.

By the treaty of Utrecht, the value and importance of our fisheries at Newfoundland, Nova Scotia, and New England are particularly regarded. The French, however, continued afterwards, and until they were deprived of all their possessions in North America, to carry on more extensively than the English did, the fisheries on the banks and coasts of America; and in 1734, heavy complaints were made by the English, who had established a very extensive and profitable fishery at Canso, in Nova Scotia, against the French at Louisburg, and other places in the neighbourhood.

About this period, the inhabitants of New England had about 1200 tons of shipping employed in the whale fishery; and with their vessels engaged in the cod fishery, they caught upwards of 23,000 quintals of fish, valued at 12s. per quintal, which they exported to Spain, and different ports within the Mediterranean, and remitted the proceeds in payment for English manufactures, 172,000*l.* §

The value of this fishery, and the important ship fishery carried on by the English at Newfoundland, were, however, of less magnitude than the French fisheries before the conquest of Cape Breton. By these alone, the navy of

§ Anderson on Commerce.

France became formidable to all Europe. In 1745, when Louisburg was taken by the forces sent from New England, under Sir William Pepperell and a British squadron, the value of one year's fishing in the North American seas, and which depended on France possessing Cape Breton, was stated at 982,000*l*.* It is, however, probable that both the English and French accounts of the American and other fisheries were exaggerated; those of Holland certainly were, not only by Sir Walter Raleigh, but also by De Witt.

It was a maxim with the French government, that their American fisheries were of more national value, in regard to navigation and power, than the gold mines of Mexico could have been, if the latter were possessed by France.

In 1748, however, at the treaty of peace, England restored Cape Breton in return for Madras, which the forces of France had conquered two years before; and that nation again enjoyed the full advantages of the fisheries until 1759, when the surrender of Cape Breton, St. John's, and Canada, destroyed French power in North America.

By the third and fourth articles of the treaty of Fontainebleau, signed in 1762, it was agreed, "that the French shall have the liberty of fishing and drying on a part of the coasts of the island of Newfoundland, as specified in the thirteenth article of the treaty of Utrecht; and the French may also fish in the Gulf of St. Lawrence, so that they do not exercise the same but at the distance of three leagues from all the coasts belonging to Great Britain, as well those of the continent as those of the islands in the said gulf. And as to what relates to the fishery out of the said gulf, the French shall exercise the same but at the distance of fifteen leagues from the coast of Cape Breton. Great Britain cedes to France, to serve as a shelter for the French fishermen, the islands of St. Pierre and Miquelon; and his most Christian Majesty obliges himself, on his royal word, not to fortify the said islands, nor to erect any other buildings thereon, but merely for the convenience of the fishery; and to keep no more than fifty men for their police."

In the history of the fishery, little of importance appears from this period until the commencement of the war with America, France, and Spain, which interrupted and checked the enterprise of the fishing adventurers.

The peace of 1763 gave the French the same advantages as they enjoyed by the treaty of Fontainebleau; and the right of fishing on all the British coasts of America, was allowed to the subjects of the United States, in common with those of Great Britain. In restoring to France the islands of St. Pierre and Miquelon, it was contended that they were incapable of being fortified; while it is well known that both these islands are, in an eminent degree, not only capable of being made impregnable, but that their situation commands also the entrance to the Gulf of St. Lawrence.

The following ships appear to have been exclusively employed in the Gulf

After the American revolutionary war, the fisheries of British America were prosecuted in Newfoundland with energy and perseverance.

In Nova Scotia and New Brunswick, the herring, mackarel, and gaspereau fisheries, were followed, but only on a limited scale. At Percé and Paspahiac, in the district of Gaspé, the cod fishery was carried on with spirit by two or three houses; and the salmon fishery followed at Rustigouche and at Miramichi. The cod fishery at Arichat, on the island of Madame, was pursued by the Acadian French settled there, who were supplied with provisions, salt and naval stores, by hardy and economical adventurers from Jersey. The valuable fisheries on the coasts of Nova Scotia, New Brunswick, and Prince Edward island, were, however, in a great measure overlooked or disregarded.

The last war with France drove the French again from the islands of St. Pierre and Miquelon, and from the fisheries. At the peace of Amiens, they returned again to these islands; but were scarcely established before the war was renewed, and their vessels and property seized by some of our ships on the Halifax station. This was loudly remonstrated against by the French government.

A combination of events occurred during the late war, which raised the fisheries, particularly those of Newfoundland, to an extraordinary height of prosperity.*

* In 1814, the exports were:—

1,200,000 quintals of fish, at 2 <i>l</i> . per quintal	£2,400,000

Great Britain possessed, almost exclusively, the fisheries on the banks and shores of Newfoundland, Labrador, Nova Scotia, New Brunswick, and the Gulf of St. Lawrence. England enjoyed a monopoly of supplying Spain, Portugal, Madeira, different parts of the Mediterranean coasts, the West Indies, and South America, with fish; and British ships not only engrossed the profits of carrying this article of commerce to market, but secured the freights of the commodities which the different countries they went to exported. By such eminent advantages, the fishery flourished, and great gains were realised both by the merchants and ship-owners. But these individual gains were realized during a war expensive beyond precedent to the nation.

It is very remarkable that, in our treaties with France, the fisheries of North America were made a stipulation of extraordinary importance. The ministers of that power considered the value of those fisheries, not so much in a commercial view, but as essential in providing their navy with that physical strength which would enable them to cope with other nations.

The policy of the French from their first planting colonies in America, insists particularly on training seamen by means of the fisheries. In conducting their cod-fishery one-third, or at least one-fourth, of the men employed in it were "green men," or men who were never before at sea; and by this trade they bred up from 4000 to 6000 seamen annually.

Kinds of Fish most important.—The descriptions of fish that swarm round the shores, and in the bays and rivers, or that abound on the different banks on the coasts of North America, are very numerous. The following are those most commonly known:—hump-back whale, and two or three other kinds; porpoise, horse-mackarel, shark, dog-fish, sturgeon, cod, eel, haddock, ling, hake, salmon, herring, allwife, mackarel, bass, shad, pond-perch, sea-perch, sculpion, trout, scale-fish, tom-cod, halibut, flounder, smelt, caplin, and cuttle-fish or squid. The quality of the different varieties of fish may be considered nearly similar to that of the same species caught in the British seas. Some, however, think that the cod, spring-herring, and haddock are, when fresh, inferior to those in the English markets. The herring caught in spring, at which time they enter the bays to spawn, are certainly not so fat; but those taken in autumn are equally as fine. The mackarel is a very delicious fish, and of much finer flavour than those caught on the shores of Europe.

In describing the fishes that abound along the coasts of our American possessions, the tribes that are of the most importance to us, as affording food, and the means of employment to man, claim the greatest attention; and nature has, in the seas of those regions so bountifully provided for the necessities of man, as to create the tribes of fishes most useful to us, in the most abundant multitude.

The *herring* and *cod* are the most generally plentiful. The first, on which the

latter feeds, precedes it, arriving in the latter days of April or early in May, and attracts it to the shores of those countries. Then follow myriads of caplin (*salmo arcticus*), always accompanied by vast shoals of cod, which are again kept on the coasts by the multitudes of cuttle-fish (*sepia loligo*), called squid in America, which the domains of the ocean send forth. *Alwives* and *mackarel* appear periodically on the coasts, all undoubtedly governed by imperative natural laws, or what we generally explain as animal instinct.

Herrings come down in shoals from the north, and striking in upon the coasts, gulfs, and bays, appear during summer as far south as Carolina. The dog fish is one of the most voracious of the herring destroyers. The *porpoise* and various other sea monsters also follow and devour herrings.

Of the *cod*, which ranks first in commercial importance, there appears to be four kinds, although their history has not been sufficiently attended to in order to determine their relations to each other as species or varieties.

The *bank cod* (*gadus bancus*) frequents the great bank of Newfoundland and other banks at a great distance from land. It differs from the other species in its not approaching the shores, its living principally on shell-fish, its body being larger and stronger, its colour lighter, its scales and spots larger, and its flesh firmer. It resembles and is probably the same kind as the *Dogger bank cod*, brought to the London market.

The *shore cod* is nearly of the colour of the bank cod, and approaches the shores, and enters the harbours, following the smaller fish, on which it feeds. It resembles most the cod on the coasts of Britain, and it is of this kind that the greatest quantity is taken, at least during late years.

The *rock, or red cod* (*gadus calcurias*) resembles, but is generally somewhat larger than, the rock cod, or red ware codling of the Scotch coast.

The *seal-head cod*, called so from its head resembling that of a seal, is the most remarkable and the most rare kind. Other differences are observed in the cod, which may arise from the peculiarity of the coasts they frequent. The livers of the cod farther north, are smaller, and less oil is obtained from the bank cod, than from any of the other varieties. It has been calculated that upwards of 400,000,000 of cod are caught annually on the coasts of British America.

The migrations of the cod are governed by the movement of the fishes on which they feed. The herring appears along the shores and in the harbours in vast swarms, or, as they are termed, shoals, early in May, for the purpose of spawning; and they may often be discovered from the whitish colour of the water over them, which is also at times quite smooth, although blowing hard, in consequence of the oily particles thrown off with the spawn.

The cod follows the herring, and remains close to the shores for some time, and then retires two or more miles. On the coast of Newfoundland in June, and

on that of Labrador in July, the caplin brings vast swarms of cod; and in August the cuttle-fish appears, followed by its voracious enemy.

On the banks, and within the Gulf of St. Lawrence, shell-fish of various kinds are the principal food of the cod. The *haddock* (*gadus aglefinus*) is much larger than on the coast of Europe, but inferior in quality. It is frequently caught among the common cod; but seldom when the "catch" is abundant.

Herrings appear again on the coasts of America in summer and autumn, and are very fat; those caught in spring are larger, but very poor.

Allwives, or *gaspereau*, appear on the coast immediately after the herring, within the harbours of the Gulf of St. Lawrence, and on the coasts of Nova Scotia, New Brunswick, and the New England States, but never we believe at Newfoundland, or farther north. The *gaspereau* somewhat resembles the herring, or is rather in appearance, a small species of shad. The scales are stronger and larger than those of the herring, and on the belly there is a sharp scaly ridge; when fresh, this fish is rather fat, and tolerably good eating; but when salted, it becomes thin, and much inferior to herring. It answers the West India market well, to which it forms an article of export of some importance.

In April, *smelts* ascend the brooks and rivulets from the sea in vast numbers to spawn. On first arriving this delicate fish is excellent; but it soon becomes poor in fresh water. It remains in the harbour all winter, and is caught with a hook and line through the ice.

Mackarel arrive on the coast in the summer, but they are then poor. Those caught in autumn are very fat. Vast quantities are caught with seines and nets; they are also caught with a hook and line, trailing fifteen or twenty fathoms after a boat or vessel under sail.

Mackarel frequent the seas of the northern temperate zone; herrings appear first in the north, and proceed south; *mackarel* appear on the coasts of America from the south, and then swim to the north. They increase in size, plumpness, and delicacy, as they proceed north. They seldom exceed two pounds in weight. The male, or milter, is generally preferred, but the roes of the female are esteemed for *caviare*. To examine, and indeed to eat the fish, it must be newly taken; keeping a few hours renders it comparatively flabby and insipid; in salting or pickling, therefore, the processes should be commenced as soon as possible after they are caught. They are voracious, and dart at a bit of scarlet cloth, or any brilliant, or silvery bait. They follow, or rather meet, and devour herrings. In the spring, *mackarel* are nearly blind, in consequence of a film that grows over their eyes, but which wears off towards summer.

The *caplin* (*salmo arcticus*) is about six or seven inches long, and resembles a smelt in form and colour, but it has very small scales. It is delicate eating, but its chief value is as bait for cod. The masses of this fish which frequent the shores of Newfoundland and Labrador would appear incredible, were not the fact

witnessed by thousands for many years. Dense shoals of them are sometimes known to be more than fifty miles in length, and several miles broad, when they strike in upon the coast and push into the creeks and harbours. Their spawn is frequently thrown upon the beach in great quantities, which a succeeding tide or two generally carries back to the sea.

The *cuttle-fish* (*sepia*) is from six to ten inches long, molluscous, and its shape and organisation peculiar. It is generally caught with jiggers; but hundreds of tuns of this fish are thrown up on the flat beaches, and the decomposition which follows produces the most intolerable effluvia. Newfoundland is also the principal resort of the cuttle-fish. It sometimes appears at Nova Scotia, Cape Breton, and occasionally at Prince Edward Island.

Salmon resort to the harbours and rivers of Labrador in great plenty, and are often abundant in many of the rivers of Newfoundland, all the rivers within the Gulf of St. Lawrence, and those of New Brunswick, Nova Scotia, and Maine are also frequented by salmon. Salmon seem to appear on the coast of America farther south than the Hudson. They are generally larger than those that appear in the English market, and are remarkably fine when in season. But, according to the statements of travellers, there are no rivers in the world which abound in larger or better salmon than those of the Oregon territory.

Shell-fish—The varieties of shell-fish are oysters, clams, muscles, razor shell-fish, wilkes, lobsters, crabs, shrimps, &c., and equally delicious as those taken on the English, Scotch, Irish, or Norwegian shores.

There are two or three varieties of *oysters*, the largest of which is from six to twelve inches long, and as fine flavoured as those taken on the British coasts.

Eels.—Epicores consider the eels of the most delicious kind. During summer and autumn, the Indians spear them in calm nights by torch-light. The torches are made of the outer rind of the birch-tree, fixed within a slit made to receive the same, in the end of a stick about four or five feet long. When lighted, it is placed in the prow of the bark canoe of the Indian, near which he stands, with a foot on each gunwale, and in a situation so ticklish, as to require the tact of a master to preserve his balance, which he does, however, with apparent ease. A boy, or sometimes his squaw (wife), paddles the canoe slowly along, while with a spear, the handle of which is from fifteen to twenty feet long, he is so dexterous and sharp-sighted, that he never misses the fish at which he darts it. Salmon, trout, and various other fishes, are taken in the same manner.

During winter, eels live under the mud, within the bays and rivers, in places where a long marine grass (called eel-grass) grows, the roots of which, penetrating several inches down through the mud, constitute their food. At this season they are taken in the following manner:—a round hole, about two feet in diameter, is cut through the ice over ground in which they are usually known to take up their winter quarters. The fishermen, with a five-pronged spear, attached to a handle

from twenty-five to thirty feet long, then commences, by probing the mud immediately under the hole; and by going round and round in this manner, extending on one circle of ground after another, as far as the length of the spear-handle will allow, comes in contact with the eels that lie underneath, and brings them up on the ice. Sometimes in the early part of winter we may see from fifty to sixty persons on one part of the ice fishing eels in this way. Trout, smelt, tom-cod, and perch, are caught in winter with hook and line through a hole in the ice; within the Bras d'or waters of Cape Breton, fine cod-fish are taken during winter in the same manner.

The walrus.—The walrus (frequently, but unmeaningly, called 'sea-horse and sea-cow') formerly resorted to the shores of the Gulf of St. Lawrence, but is now rarely seen except on the northern coast of Labrador and Hudson Bay, and occasionally at the Magdalen Islands, and near the Straits of Belle Isle.

Seals.—There are, apparently, five or six varieties of seals that frequent the coasts of America; but, with the exception of the harbour seal (*phoca vitulina*), which does not seem to be migratory, it is probable that age and accident produce the difference in size, shape, and colour, that has occasioned their being classed in varieties, as they come down promiscuously on the ice from the hyperborean regions in immense herds. They leave the polar seas with the ice, on which they appear to bring forth their young. On the ice dissolving they return again to the north. Five kinds are named in the Greenland seas, and these come down to the coasts of Labrador, Newfoundland, and the Gulf of St. Lawrence. The harp seal (*phoca Groenlandica*); the hooded seal (*phoca leonina*), and three other varieties, the square flipper, the blue seal, and the jar seal.

Herds of these, many leagues in extent, on the ice, seem to have no means of subsistence. Caplin and other substances are, it is true, occasionally found in their stomachs; but from the impossibility of their being able, often for a week, to get off the ice into the water, it is wonderful that both old and young are exceedingly fat. The flesh is very unpalatable. Many of these seals are beautifully speckled, black and white, others gray, and some blue.

Seal Fishery.—The vessels equipped for the seal fishery are from 60 to 120 tons each, with crews of from sixteen to thirty men. They are always prepared for sea, with necessary stores, fire-arms, poles to defend them from the ice, &c., before the feast of St. Patrick. Immediately after, the crews at the harbours, then frozen over, collect together, with all assistance from the shoremen, and dividing themselves into two rows on the ice, and provided with hatchets, large saws, and strong poles, fix on two lines far enough separate to allow their largest schooners to pass. Each party cuts along its respective line, and they divide the solid mass between them into squares, which are shoved with poles under the firm ice; continuing this laborious operation until a channel is open to the sea. The vessels then proceed to the field-ice, pushing their way through the openings, or

working to windward of it, until they meet it covered with vast herds of seals. Where these occur, the part on which they are is called seal meadows. These animals are surprised by the seal hunters while they are sleeping on the ice, and attacked with firelocks or with strong bludgeons, which are considered preferable. But the hunters have frequently to shoot the large ones, which will turn upon the men and make resistance. The piteous moan and cry of the young ones during the slaughter, require more than common nerves to disregard. The hooded seals will draw their hoods, which are shot-proof, over their heads.

The skins, with the fat surrounding the bodies, are stripped off together, and the scalped carcasses left on the ice. The pelts or scalps, are carried to the vessels, and packed closely in the hold ; but the weather often is such as to leave no time to scalp the seals on the ice, and the carcasses are then carried whole to the vessels.

The situation of these vessels, during the storms of snow and sleet, which they have at that season inevitably to encounter, is attended with fearful dangers. Many vessels have been crushed to pieces by the tremendous power of the ice closing on them, and their crews have also not unfrequently perished. Storms during night, among the ice, must be truly terrible ; yet the hardy Newfoundland seal hunters seem even to court those sublime and hazardous adventures.

When the vessels are loaded with scalps, or if unsuccessful, when the ice is scattered, and all, except the islands, is dissolved by the heat of the advancing summer, they return to their respective ports. Some vessels, which succeed soon after meeting the ice in filling up a cargo, make a second voyage.

The fat, or seal-blubber, is separated from the skins, cut into pieces, and put into framework vats, through which, and small boughs inside, the oil oozes on being exposed to the heat of the sun. In three or four weeks it runs rapidly off, and becomes the seal oil of commerce.

The vats for cod-oil are made of strong planks dovetailed at the ends, and strengthened with iron clamps. Whatever water is mixed with the cod-blubber, is afterwards allowed to run out by a plug-hole at the bottom, while the oil, floating on the top, runs off at different holes, and is guided into casks by leather spouts. The first that runs off is the virgin, or pale oil, and the last the brown oil. The blubber fritters are afterwards boiled in a metal cauldron to obtain the remaining oil from them.

The planters sell their seal pelts to the merchants who manufacture the oil and ship it off in hogsheads, principally to England.*

The seal-skins are spread and salted in bulk, and afterwards packed up in bundles of five each for shipping.

Seals are still caught at Newfoundland and Labrador, on the plan first

* The water pumped out of vessels carrying oil always calms the surrounding sea ; and the sea on the banks was made smooth, it is said, during the fishing season when the bank fishery predominated.

adopted, by strong nets set across such narrow channels as they are in the habit of passing through.

Cod Fishery.—In the beginning of June, the cod-fishery commences. The bank fishing is now, from various causes, abandoned by the English to the Americans and French, although the political value of Newfoundland as a nursery for seamen depended very much upon this fishery. It was carried on by vessels, fitted out in England; and the people employed in it being the greater part of the year at sea, exposed to the weather of all seasons, cold and hot, stormy and calm, wet and dry, were consequently prepared for any hardship, and ready to encounter any danger.

The bankers, or vessels fishing on the banks, usually anchor where they find plenty of cod, which they catch with lines and hooks, or occasionally with jiggers. The operation of gutting and splitting are the same as on shore; and the fish is salted in bulk in the vessel's hold, until the cargo is completed. The fish caught on the banks are larger than those caught by the boats employed in the shore fishery, but do not look so well when cured, owing to lying so long in salt before being dried. It is, however, preferred in some markets on account of its size. At present, there are but few British vessels employed in the bank-fishery; formerly there were 600 or 700.

The boats used for the shore-fishery are of different sizes, some requiring only two hands, whilst others have four, which is the general number. It is not uncommon to observe boys and girls, when cod is plentiful, fishing in these boats. Every fisherman is provided with two lines, having to each two hooks; both lines are thrown over at the same time, one on each side of the boat, to which one man attends. The kind of bait in season used, is such as herring, mackerel, caplins, squid, and clams, and when none of these are to be had, the flesh of animals. The entrails of fish taken with jiggers, and what is found within them, is also used for bait. A jigger is a piece of lead made into the form of a small fish, with two hooks fixed in its mouth, and turned outwards in opposite directions. It is made fast to a line, and thrown over into the sea; and by jerking it up and down the hooks frequently fasten into the cod or other fish; the cod, which is probably the most voracious fish we know, also darts at and swallows the artificial fish with the hooks fastened in it; by these methods vast quantities of cod are caught. Seines are also used, by which multitudes of cod are hauled ashore in coves on the coast of Labrador.

When the boats are stationed on the fishing ground, which is sometimes within the harbours, and in the first of the season, near the shore, the men sit or stand at equal distances from the gunwales, and each attends to his own lines. So abundant are the fish at times, that a couple of cod are hooked on each line before the lead reaches the bottom, and while the one line is running out the fisherman has only to turn round and pull in the other, with a fish on each hook.

In this way they fill the boat in a very short time. If the cod be very large, it is lifted into the boat as soon as it comes to the water's edge, by a strong iron hook fixed on the end of a short pole, called a gaft. As soon as the boat is loaded, they proceed to the stage on the shore with the fish, when the operations of splitting and salting succeed. Fish should be brought to the shore within forty-eight hours, at farthest, after it is caught. When plentiful, the boats often return in two or three hours, and push away again immediately after the fish is thrown on the stage.

The stage is a building erected on posts, jutting out into the sea, far enough to allow the fishing boats to come close to its end. Generally covered over, and attached to it, or rather on the same platform, is the salt-house, in which there are one or more tables, with strong wooden stools for four important personages among the shoremen, distinguished by the expressive cognomens of cut-throat, header, splitter, and salter. The splitter is next in rank to the foreman of the fishing-rooms, who is called master-voyage, and, under him, receives most wages; the next in precedence and wages is the salter. The cut-throat and header are pretty much on a par.

The fish is thrown, with a kind of pike, upon the stage, and carried, generally by boys or women, to the long table. The business of the cut-throat, as his name implies, is to cut, with a sharp-pointed, double-edged knife, across the throat of the fish to the bone, and rip open its bowels. He then passes it quickly to the header, who, with a strong, sudden wrench, pulls off the head, and tears out the entrails, passing the fish instantaneously to the splitter, and, at the same moment, separating the liver, precipitates the head and entrails through a hole in the platform, into the sea, under the stage-floor. The splitter, with one cut, lays the fish open from head to tail, and, almost in the twinkling of an eye, with another cut takes out the sound-bone, which, if the sounds are not to be preserved, he lets fall through a hole into the sea, throwing the fish, at the same moment, with the other hand, into the trudge-barrow. Such is the amazing quickness of the operations of heading and splitting, that it is not unusual to decapitate and take out the entrails and back-bones of six fish in one minute.

When the barrow is full, it is carried away immediately to the salter, and replaced by another.

The business of the salter is most important, as the value of the whole voyage depends on his care and judgment. He takes the fish out of the barrow, one by one, spreads them, with the back undermost, in layers, sprinkling a proper quantity of salt between each. The proportion of salt necessary to cure codfish is generally estimated at the rate of one hogshead to ten or twelve quintals; but much depends on the place, and the state of the weather. More salt is used for green fish, or fish remaining long in bulk, than for fish salted on shore to be spread out to dry in a few days; and more is necessary at Labrador than at Newfoundland. Sometimes the fish is salted in vats, which requires less salt, and

also increases the weight ; but it does not look so well, nor is it so much esteemed in foreign markets.

In salting, the *bulks* must not be high, as the weight of the higher would injure the lower tiers. In bulks, the fish must remain five or six days, and in vats four or five. It is then carried in barrows, and thrown into vats or troughs full of holes, suspended from the stage in the sea. In this vat, the washer stands up to his knees among the fish and sea water, and wipes off the salt with a mop. The fish is then carried away in a barrow, and piled in a long heap, called by the unintelligible name of "water-horse," for the purpose of draining. In this state it may remain a day, before it is spread out on the flakes.

The fish then undergoes the process of drying. They are spread, heads and tails, either on hand-flakes, which are about breast high from the ground, and slightly constructed, or on broad flakes, raised on strong posts, sometimes twenty feet high, with platforms of poles laid across. The latter, as being more exposed to pure air, are considered preferable. The fish is also, at times, spread out on boughs laid on the beach or ground. In the morning, it is usually spread, with the fleshy side uppermost, and turned about mid-day, or more frequently if the weather be hot. In the evening, they are gathered into small heaps, called "fagots," which are increased in size, as the fish dries, from four or five to twenty, or more ; and, when nearly cured, made into large circular piles, much in the form of a haystack, with the upper layers always laid down, with the skin uppermost. These piles are thatched with rinds of the spruce fir, or with tarpaulins, or circular deal frames, which are pressed down with heavy stones. After remaining some time on these piles, to "sweat," as the fishermen term it, the fish is spread out again to complete the drying, and then removed into the warehouses.

As the least rain will spoil the fish, if not immediately attended to, nothing can exceed the hurry of men, women, and children, whenever showers come on ; they abandon every other engagement, and even run, if on Sunday, out of places of worship to collect the fish into fagots or piles.

The nature of the cod-fishery is truly precarious. Sometimes the cod is not equally abundant on all parts of the coast, and, in that case, the fishermen have often to go a great distance in quest of them, and, in some cases, have to split and salt their fish in the boat. The incessant labour, also, which attends the curing, leaves the shoremen scarcely time, during the season, to eat their meals, and allows them little more than four hours' sleep.

The quality of the fish is affected by the least inattention or error in curing. If the weather be hot and calm, it is affected with fly-blows, and becomes maggotty ; and a few fish of this description may contaminate a whole cargo. If too much salt have been used, the fibres break in drying, and the fish falls to pieces. In this state, it is called salt-burnt, and is unfit for market. It is

affected much in the same way when left too long exposed to the sun, without turning, and is then called sun-burnt. In damp or wet weather, putrefaction is apt to commence; it then becomes slimy; or, by the weather beating on it, when in piles, it sometimes takes a brownish colour, and is called dun-fish which, although excellent for present use, is not fit for shipping.

Previous to exportation, the fish are sorted, when it is culled, or sorted, into four qualities. First, the merchantable fish, which are those of the finest colour and quality; second, Madeira, which are nearly equal to the first; third, West India fish, the refuse of all that is sufficiently cured to stand a sea-voyage without putrifying, and which, with the greater part of the Madeira, is sent for sale to the West Indies, to feed the negroes; lastly, the broken fish, dun-fish, or whatever will not keep in warm countries, but which is in general equally good for domestic consumption: mud-fish, or green-fish, is generally understood to be codfish either wholly or partially split and pickled. The sounds are generally taken from the bones, and the tongues cut out of the heads by women and children, or old men. They are pickled in kegs. The livers of cod are put into vats or puncheons, exposed to the sun, the heat of which is sufficient to render them into oil, which is drained off, and put into casks for shipping, the remaining blubber is boiled to obtain the oil it contains.

The livers taken from the number of cod that will, when dry, make up 300 quintals, ought to produce a tun of oil; but sometimes it requires double the quantity to yield a tun, while the livers of 150 quintals have been known to produce a tun.

The shore-fishery is the most productive of both merchantable fish and oil. The northern fishery, now enjoyed by France, was carried on by the planters, by proceeding in schooners, with necessary stores and skiffs, in the northern harbours of Newfoundland, much in the same way as the fishery is at present conducted at Labrador, and the schooners sent back with the fish to the respective merchants. The last fish brought home by the vessels being, like that sent in the autumn from Labrador, green, is discharged on its arrival into vats, or troughs, attached to the stages, and the salt washed off, when it is thrown on the stage, and piled into a *water-horse* to drain before drying. The fish cured in the northerly parts of Labrador is chiefly prepared in the cold, dry air. The western fishery, carried forward on the west coast of Newfoundland, is also, by treaty, abandoned to the French.*

Whenever the planter settles his account, in the fall of the year, with his merchant, and pays the wages of his servants, he prepares for winter, laying in provisions, &c.; and in the following spring he resumes the same laborious course of employment that occupied him during the preceding year.

* There is a whale fishery on the south side of the island, carried on by pursuing the whales in boats. The whale fishery within the Gulf of St. Lawrence will be found described hereafter. See account of the district of Gaspé.

HOUSES AND FOOD OF THE NEWFOUNDLAND FISHERMEN.

The fishermen's houses are one story high, built of wood growing on the island, and covered with boards and shingles imported from Prince Edward Island, Cape Breton, Nova Scotia, or New Brunswick. It was long customary to erect the walls with upright posts stuck in the ground; but an improvement prevails by building the wooden walls on a stone foundation. Sometimes an additional building is joined called a "lean to," which is either in one room—a kind of parlour—or is divided into sleeping apartments. There is usually not more than one large fire-place, which is in the kitchen, and around which, in winter, all the inmates of the house assemble when the labours of the day are over. In the chimneys they smoke their salmon, or hang up the hams of the pigs reared in the island. On each side of the chimney there are often benches, with coops underneath for poultry, which, from the warmth of the dwellings, lay eggs all winter.

The usual diet of the people is made up of biscuit, potatoes, fish, salt pork, and bohea tea. Spruce beer is a very common and wholesome beverage, particularly for people who live much on fish and salt meat. The process of making it is simple. A few black spruce branches are chopped into small pieces, and put into a pot containing six or eight gallons of water, and boiled for several hours. The liquor is then strained and put into a cask that will contain eighteen gallons. Molasses is added in the proportion of one gallon to eighteen, a part of the grounds of the last brewing, and a few hops, if at hand, are also put in; and the cask, filled up with cold water, is left to ferment; in twenty-four hours it becomes fit for use. Spirits are frequently mixed with spruce beer to make the drink named callibogus. From the cheapness of rum, the labouring people, though by no means generally, acquire habits of drinking, which they have only resolution to resist by swearing, by the cross, or the gospel, that they will not taste rum or spirits of any kind. This act is called kegging, extending to one or more years and often for life.

The inhabitants are generally very healthy; but from living much on flesh, fish, and oily food, fevers or small pox, when imported into the island from other places, are generally fatal, and occasion great mortality. Consumptions do not appear to be so frequent as on the continent of America. The air, though raw and cold, seems to invigorate the constitutions of the people; and their strength in old age, when we consider the life of unremitting labour which they necessarily lead, is surprising: men and women at the age of eighty, are frequently observed attending the fish flakes.

The great and primary business of the people of Newfoundland is, that of pursuing and catching the inhabitants of the ocean. If habit, as it is generally allowed, becomes nature, the Newfoundlanders are naturally, from their pursuits, certainly the most adventurous and fearless men in the world. Courage and industry, which certainly prevail, are to them absolutely necessary.

The seal fishery, as it is generally termed, has only become important within the present century. It is little more than thirty years since the first vessels ventured among those formidable fields of ice that float from the northern regions during the months of March, April, and May, down to the coast of Newfoundland. Those who are acquainted with the terrific grandeur, particularly during stormy weather, of the lofty islands and mountains of ice, covering often from 200 to 300 miles of the ocean, and occasionally arrested by the coasts or shoals, will admit, that it requires more intrepidity to brave the dangers of these elements than to encounter a military fortification.

LABRADOR.

Labrador Fishery.—During the fishing season, from 280 to 300 schooners proceed from Newfoundland to the different fishing stations on the coast of Labrador, where about 20,000 British subjects are employed for the season. About one-third of the schooners make two voyages, loaded with dry fish, back to Newfoundland, during the summer; and several merchant vessels proceed from Labrador with their cargoes direct to Europe, leaving generally full cargoes for the

fishing vessels to carry to Newfoundland. A considerable part of the fish of the second voyage is in a green or pickled state, and dried afterwards at Newfoundland. Eight or nine schooners from Quebec frequent the coast, having on board about eighty seamen and 100 fishermen. Some of the fish caught by them is sent to Europe, and the rest carried to Quebec; besides which they carry annually about 6000*l.* worth of furs, oil, and salmon to Canada. From Nova Scotia and New Brunswick, but chiefly from the former, 100 to 120 vessels resort to Labrador; the burden of these vessels may amount to 6000 or 7000 tons, carrying about 1200 seamen and fishermen. They generally carry the principal part of their cargoes home in a green state.

One-third of the resident inhabitants are English, Irish, or Jersey servants, left in charge of the property in the fishing rooms, and who also employ themselves in the spring and fall, catching seals in nets. The other two-thirds live constantly at Labrador, as furriers and seal-catchers, on their own account, but chiefly in the former capacity, during winter, and all are engaged in the fisheries during summer. Half of these people are Jerseymen and Canadians, most of them have families.

From 16,000 to 18,000 seals are taken at Labrador in the beginning of winter and in spring. They are very large; and the Canadians and other winter residents, are said to feast and fatten on their flesh. About 4000 of these seals are killed by the Esquimaux. The whole number caught produce 350 tuns of oil, value about 8000*l.*

There are six or seven English houses, and four or five Jersey houses, established at Labrador unconnected with Newfoundland, who export their fish and oil direct to Europe.

The quantity exported, in 1831, to the Mediterranean was about

54,000 quintals of codfish, at 10 <i>s.</i> per quintal	£27,000
1,050 tierces of salmon, at 60 <i>s.</i> per tierce	3,150

To England, about

200 tuns of cod oil	5,200
220 " seal oil	4,880
Furs	3,150
	<hr/> 43,380

By Newfoundland houses:

27,500 quintals of codfish, at 10 <i>s.</i> per quintal	13,750
280 tierces of salmon, at 60 <i>s.</i> per tierce	840

Total direct export from Labrador

Produce sent direct to Newfoundland from Labrador:	
32,120 quintals of codfish, at 10 <i>s.</i> per quintal, best quality	16,060
312,000 " " at 8 <i>s.</i> " "	124,800
1,800 tuns of cod oil, at 20 <i>s.</i> per tun	36,000

Carried forward

	Brought forward	£234,830
Salmon, &c.		3,220
Fish, &c., sent to Canada, about		12,000
Ditto, carried to Nova Scotia and New Brunswick, should be in value at least		52,000

Estimated value of the produce of Labrador, exclusive of what the Moravians } £302,050
 send to London* }

The Labrador fishery has, since 1814, increased more than sixfold, principally in consequence of our fishermen being driven from the grounds now occupied by the French.

The Moravians, whose principal settlement on the coast of Labrador is at Nain, have a ship annually from London, which leaves the Thames in May or June, and arrives at Nain in July, from whence it returns in September, laden with a valuable cargo of furs, oils, &c., for London. My inquiries respecting these people have not been successful. They fixed themselves in three different harbours of Labrador, about the middle of the last century. Their intercourse with, and settlements at, Greenland, led them to this region. Their habits are simple; and the quiet and unobserved life they lead is of a nature which leaves to few in America, or elsewhere, the knowledge of their existence. Their trade is wholly with the Esquimaux, in the way of bartering coarse cloths, powder, shot, guns, and edge tools, for furs, oils, &c.

NOVA SCOTIA, CAPE BRETON, AND ST. LAWRENCE FISHERIES.

These fisheries might be carried on to any extent which a demand for supplying the markets of the world would justify. The coasts of Nova Scotia which we have already described, abound with excellent harbours, admirably adapted for carrying on the fisheries. The inhabitants about St. George's Bay, the strait of Canso, Chedabucto Bay, and the opposite shores are mostly engaged in fishing; the country near the Atlantic being generally rocky and sterile, render the fisheries the more available occupations. Many of the inhabitants of Chester, Mahon Bay, Liverpool, and Shelburne, are also engaged in the fisheries. Cod, mackarel, herring, shad, allwives, salmon, halibut, sturgeon, sole, and other kinds of fish frequent the coast, and exclusive of gypsum, coal, and timber, the exports of Nova Scotia consist nearly altogether of the produce of the fisheries.

The cod and herring fisheries of Prince Edward's Island, which might be greatly increased, have, in consequence of the superior agricultural advantages of that colony, been chiefly confined to fishing for domestic use; and the same remark applies, with some exceptions, to the opposite shores of Nova Scotia and New Brunswick within the Gulf of St. Lawrence.

Within the Bay de Chaleur there have long been fishing establishments,

* These statements are made at the most depressed prices, and not at the average prices, which would increase the gross value to 342,400*l*. The Americans of the United States had, in the year 1829, about 500 vessels and 1500 men employed on the coast, and their catch amounted to 1,100,000 quintals of fish, and about 3000 tuns of oil; value altogether about 610,000*l*.

and the cod fisheries at Gaspé, Perée, Paspabiac, Shippigan, Caraquette, and other places; the salmon fishery in the river Rustigouche was formerly carried on at a profit and to a considerable extent.

BAY DE CHALEUR FISHERIES.—Two miles below Carlisle is the settlement of Paspabiac, inhabited chiefly by Acadian French, who employ themselves principally in fishing. There are, also, several people from Jersey, attached to the highly respectable fishing establishment of Messrs. Robins and Co. The harbour, or lagoon of Paspabiac admits only very small schooners and boats; but ships and large schooners ride safely at anchor in the road. The fish stores, flakes, &c., are ranged along a very fine beach, where the people connected with the fisheries are incessantly employed during the summer and autumn; in winter they retire back near the woods. Messrs. Robins' establishment was formed, I believe, about sixty years ago, by the elder partner and parent of the firm; and its admirable plan of systematic management, the essential characteristics of which are ceaseless industry, frugality, and prudent caution, and particularly in having no one engaged about the business that is not usefully or productively employed, has long secured to it the most solid prosperity. During summer, their ships, ten, or often more, in number, are moored in the road, with their top-masts and yards lowered, and the whole, I believe, given in charge to one master and his crew, while the other masters with their crews, are despatched in shallops to various parts of the bay, either to fish, or collect the cured fish from the fishermen who receive their supplies from Messrs. Robins and Co. In autumn, the ships depart with full cargoes of the best fish for ports in Portugal, Spain, and within the Mediterranean. They have, also, a ship-building establishment, where they have built a ship annually,* principally of larch. They are remarkably durable ships.

GULF OF ST. LAWRENCE WHALE FISHERY.—The whales caught within the Gulf of St. Lawrence are those called "humpbacks," which yield, on an average, about three tuns of oil; some have been taken seventy feet long, which produced eight tuns. The mode of taking them is somewhat different from that followed by the Greenland fishers; and the Gaspé fishermen first acquired an acquaintance with it from the people of Nantucket. An active man, accustomed to boats and schooners, may become fully acquainted with every thing connected with this fishery in one season. The vessels best adapted for the purpose are schooners, of from seventy to eighty tons burden, manned with a crew of eight men, including the master. Each schooner requires two boats, about twenty feet long, built narrow and sharp, and with *pink* sterns; and 220 fathoms of line are necessary in each boat, with spare harpoons and lances. The men row towards the whale, and, when they are very near, use paddles, which make less noise than oars. Whales

* One of those vessels which I saw moored in 1824, among the small fleet of Messrs. Robins in the bay De Chaleur, I went on board of afterwards, in 1839, in the port of Messina, where the vessel, then more than thirty years old, and perfectly sound, was discharging, in excellent condition, a cargo of dry codfish to feed the Sicilians.

are sometimes taken fifteen minutes after they are struck with the harpoon. The Gaspé fishermen never go out in quest of them until some of the small ones, which enter the bay about the beginning of June, appear; these swim too fast to be easily harpooned, and are not, besides, worth the trouble. The large whales are taken off the entrance of Gaspé bay, on each side of the island of Anticosti, and up the river St. Lawrence, as far as Bique.

With respect to the present state of the Gulf of St. Lawrence fisheries, the following extracts contain our latest information:—

“I intended to begin with the salmon fishery, its *decrease*, and the *causes thereof*; but at present I shall content myself by merely calling your attention to the lamentable state that valuable branch of industry is in at present, when contrasted with what it was formerly, when the Bay de Chaleur and its prolific rivers enabled us to export annually *thousands* of barrels; but now, unfortunately, a few *hundreds* is the maximum; all this occasioned by want of *proper* legislative regulations, but which, owing to the locality, requires *corresponding* enactments in the sister colony of New Brunswick. I have been engaged in the trade myself, and know a little on the subject.

“But, although the salmon fishery is of importance, the cod fishery is far more so, and to it I respectfully solicit your attention, whilst I attempt to point out the causes of its present decline on our shores, and which will, sooner or later, totally prove its destruction; for it is a lamentable fact, that in the upper part of the Bay de Chaleur, the cod fishery is each year decreasing; and where, a few years ago, abundance were taken, it is with difficulty the inhabitants *now* can catch enough for their winter supply. The numerous large deserted sheds and buildings going to ruin at Carleton, Maria, New Richmond, Bonaventure, and other places, is a convincing proof; and even at present, in the lower part of the bay, the fishery has so decreased, that the fishermen are compelled to go out to the *banks* in open boats, whereby many lives are annually lost, the poverty of the inhabitants not allowing them to build larger, and, consequently, more expensive vessels, in order to follow the fish to its deep water recesses; so that, in a very short period, I apprehend the shore fishery will be only remembered.

“The cause thereof is, the codfish are necessitated to desert our shores in consequence of the *destruction* of their *proper* and *natural* food, mackarel, herring, and caplin. The former, our neighbours, the Americans, have taken under their special protection, and we take immense quantities of the latter, not for eating, selling, or for bait, but for *manuring our lands*. I have known upwards of 500 barrels of caplin *taken in one tide, expressly* for that purpose, and have seen near 1000 barrels of herrings lying rotting on the beaches, having been caught, and never taken away; and, in the Bay de Chaleur, it has been remarked, that as *agriculture advances, fishery recedes*, owing to the causes above stated. The fishermen are well aware of this, and, at one of the general meetings under the Municipal Ordinance, endeavoured to make some regulations, and, by a petition to their warden, himself a fisherman, requested him to enforce them; but unfortunately, although he possessed the *will*, he had not the *power* to do so. The grand jury, also, in one of their presentments, besought the interference of the legislature, but as yet nothing has been done.”—*Letter addressed to the Members of the Canadian Legislature.*

Notes on the St. Lawrence fisheries, by Captain R. Fair, Royal Navy, lately commanding her Majesty's ship, *Champion*:—

“On the 21st of April, 1839, having arrived at the southern entrance of the Gut of Canso, we anchored in Inhabitanee bay. This is a very spacious and well sheltered bay, of considerable extent, with excellent holding ground, from eight to nine fathoms water.

“There appears to be but little fishing carried on in this immediate neighbourhood. American fishing schooners, a great number of which passing through the gut, frequently stop to wood and water on the Canso shore; and I understand that many of the inhabitants (young men) enter on board of these vessels for the fishing season, receiving about twelve dollars per month, and in many instances, are induced to continue for the voyage, and, finally leave Nova Scotia for the United States.

"It was not until the 29th of April, that the gut was sufficiently clear of ice to admit of our proceeding to the northward, when we got under way and ran through. Thence cruising through the Northumberland straits, and running along the coast of Miramichi, the Island of Shippingham and Miscou, we arrived in Gaspé bay, on the 3rd of May, and anchored abreast of Douglas town.

"We left Gaspé bay on the 9th, and passing by the fishing establishment of St. Peter's, Malbay, and Percée, anchored at Paspabiac (Bay of Chaleur) on the 10th May.

"This is by far the most important and most extensive fishing establishment in the gulf. It belongs to the firm of Robins and Co., who have very extensive stores at this place, they build ships of considerable burden, and send them, loaded with fish, to all parts of the world; their chief markets are the Brazils and Naples. They employ in the trade from this place, four ships, three brigs, and one schooner, amounting to about 1500 tons—their crews about 150 men.

"The fishing on this coast is entirely carried on in small boats, with two men in each, who, every evening, return on shore, when the fish is landed and cured. At the close of the summer fishing season (from the 8th to the 15th of August) all the fish caught at the several establishments, and along the coast, is brought in, and laden on board the different ships.

"After having ascertained the period when the fishing would commence on the coast, we left the Bay of Chaleur, and proceeded towards the Magdalen islands, where we arrived, and anchored in Pleasant bay on the 19th of May.

"We found the herring fishing had commenced, and in active operation in the several parts of the bay (chiefly in the little harbours of Amherst and House Harbour) by about 146 sail of American fishing schooners, of from sixty to eighty tons, and each carrying seven or eight men. Among them, were not more than seven vessels belonging to the British possessions, and they, chiefly from Arichat.

"The quantity of herrings was very great,* exceeding that of any former year; and the expertness and perseverance of the American fishermen, were far beyond that of the Arichat men. It is computed that the American fishing schooners average nearly 700 barrels each, and the barrel is valued at one pound sterling, making for the 146 sail, then in the bay, a presumed product of 100,000 barrels, value 100,000*l.* sterling; the tonnage employed, about 10,000; and the number of men, about 1000.

"We remained at the Magdalens† until the 27th of May, in which time several of the American vessels, having completed their cargoes, had sailed for their respective ports.

"Leaving the Magdalens, we touched at Pictou. There is no fishing carried on at Pictou. The country around, being agricultural, is rapidly improving; and the quick intercourse by steam with Prince Edward's island, promises to be of great advantage.

"We sailed from Pictou on the 3rd of June, and coasting around the east end of Prince Edward's island, again visited the bays Chaleur and Gaspé, and the coasts adjoining; and stretching over to Anticosti, landed on the east end, and examined the new lighthouse lately erected on Heath point: it was commenced in June, 1831, and finished in September, 1835. A few fishing shallops belonging to the Magdalens, were fishing off the east end, where they found cod in great abundance, and of excellent quality.

"Quitting Anticosti, we stood over for the Labrador coast, and on the evening of the 17th of June made Mount Isle. We cruised along the shore, westward, without meeting with a single sail, experiencing light baffling wind and thick weather, the current strong, and of uncertain direction. On the 22nd, we anchored in Mingan harbour. This is a safe, but very confined anchorage, there not being room in it sufficient for a vessel to lie at single anchor. The tide or current runs strong, and it requires a leading wind to enter or depart from it. Mingan is the principal establishment of the Hudson's Bay Company on this coast; and its outposts extend westward to the river St. John, and eastward to the Masquara, some distance from Mount Isle. The agent's house and storehouses are

* So plentiful are the herrings, that they are lifted out of the water into a boat, merely dipping it into the sea alongside as fast as it can be done.

† A curious anomaly exists in the government of these islands: they are under the jurisdiction of the Governor of Canada, at Quebec, from which place they are cut off, nearly half of the year, while they are open to Nova Scotia at all times.

situated close to the beach, and abreast of the anchorage. Mingan, although the first and most extensive establishment on the coast, does not appear to be of very great importance. The amount, or value of furs annually collected, does not exceed 4000*l.* sterling, and the salmon fishery is productive to about the same amount. It is said that the animals, as well as the Indian hunters, are rapidly decreasing. The salmon fishing at the several rivers, is carried on by two or three men (at most) at each river, except at Natishquan, which is their best and largest fishery: here seven men are stationed during the summer months, and their usual take, or catch, is about 180 tierces. Towards the end of July, all those men, with the produce of their labours, are taken up by the company's tender to Mingan, and thence to Quebec, the general depôt. The agent, and six or seven persons with him, remained at Mingan during the winter; but along the shore, or near the coast, there are no inhabitants, either Europeans or Indians.

"We sailed from Mingan on the 26th of June, and running along the western shore, passed the river St. John, and on the 28th, anchored in the Bay of Seven Islands. From this point, they fish only two rivers; and the quantity of salmon taken is very small, in fact, the produce of the establishments, has not, for several years, covered the expenses.

"On the 30th of June, we sailed from the Bay of Seven Islands, and continued to coast along the Labrador shore eastward, passed the Mingan islands, occasionally stretching over towards the Island of Anticosti. Along the shore eastward of the Mingan islands, the most striking and remarkable objects are the storehouses and flagstaff, at the entrance of the River Nabaysipic. Eastward of Nabaysipic, are some small islets, which afford protection to an anchorage for small vessels—it is called Little Natishquan. In this anchorage we found five shallows from the Magdalens, and a small French schooner from Miquelon, forced in, according to the master's statement, by the severity of the weather.

"Off this part of the coast is excellent cod fishing, and at times the Americans resort to this neighbourhood, but none have been seen here this year.

"In cruising near the east end of Prince Edward's island, and running along the shores, we observed a great number of American fishing vessels, but none *near* the shore, nor was there a single case which called for our interference, or where it was necessary even to recommend caution—on the contrary, the Americans say that a privilege has been granted to them, and that they will not abuse it. Between the east end of Prince Edward's island, to within seven leagues of the Bay of Chaleur, we passed through a fleet of from 600 to 700 sail of American fishing schooners, all cod fishing; it had not been a fortunate season for them, and great numbers had gone towards the Straits of Bell Isle for better success.

"The house of Janverin & Co., at Gaspé, exported in the year 1836 from 15,000 to 20,000 quintals of codfish, chiefly for the Brazils and South America. Other minor establishments export largely also—perhaps from Gaspé and its neighbourhood, the whole export may be about 40,000 quintals.

"From Gaspé we again stood over towards the Magdalen islands, but in crossing the Bradelle bank, where we had so lately seen above 500 fishing schooners, we did not meet with more than ten sail."

There are salmon fisheries on the coast of Labrador within the Gulf of St. Lawrence, and excellent salmon is caught in the various streams which fall into the St. Lawrence chiefly on the north side, especially in and east of the Sagahny river. Codfish is caught also at Grand Etang and several other places above Gaspe.

GASPÉ COMPANY.—A Company has lately been incorporated for fishing and other projects in the district of Gaspé, Lower Canada. At to the success of the company in the fishing branch of its project, and which we consider by far the most important, all will depend on judicious management. The most abundant cod-fishing banks, and shores, in the world are not excelled by those within the Gulf of St. Lawrence.

Extract from a recent official report on the "Fisheries of Nova Scotia."

"It is well known that the waters which lave our shores teem with the various species

of the finny tribe, and afford an inexhaustible mine of wealth to the industry of the fishermen. Probably in no part of the world are they surpassed, and, indeed, they form the envy of the surrounding nations. The extent to which they might be rendered productive is almost beyond any thing of which we at present have an idea. The Americans well appreciate the value of this trade, and the extent to which they carry it on at our very doors should teach us its importance. In 1837, which is the last year for which we have any return, the state of Massachusetts alone employed 1290 vessels in the cod and mackerel fishery, of the total burden of 76,089 tons. By these were employed 11,149 persons, by whom were taken 510,554 quintals of codfish, and 234,059 barrels of mackerel, valued at 3,203,559 dollars, or over 800,000*l*. From 700 to 800 vessels are said annually to pass through the Gut of Canso, which usually return home with large cargoes taken at our very doors. There is always a great deal said about their encroachments, and we are apt to blame them that our fisheries are not more productive than they are, and instead of engaging all our energies to compete with them, we are employing a host of revenue cutters, &c., to drive them from our shores. Every body must see that the Americans are placed under many disadvantages for prosecuting the fisheries in British waters, and that if proper enterprise were employed, our advantageous position would enable us not only to compete with them successfully, but also to drive them from our shores by underselling them in their own markets. But we find that they almost entirely monopolise our deep-sea fishery, while we look idly on, and grumble at their success. We are aware that the Americans impose a high duty upon our fish and other products, and that in the United States market they have in this respect a great advantage over the Nova Scotia fishermen; but these are necessary to the very existence of the American trade, and with all their bounties, duties, &c., we could compete with them in their own markets. As it is, large quantities are already exported thither, and this is rapidly increasing.

"That the fisheries are probably the most important branch of industry which Nova Scotia possesses, will be evident from a slight examination of the subject. Much of the land lying on the sea-coast is entirely unfit for the purposes of agriculture, and yet there are parts on which the ocean pours her wealth in the greatest abundance. Although we are of opinion that the fisheries of Nova Scotia have never been carried to their full extent, yet their amount at the present moment is sufficient to show their importance as a source of national wealth.

"In 1840, as appears from official returns to the house of assembly, and published in the report of the committee on deep-sea fishery, the *exports* consisted of 327,026 quintals of dry fish; 71,676 barrels, 1147 tierces, and 3643 kits of pickled fish; 27,755 boxes of smoked fish; 2553 barrels and 4661 casks of oil; and 17,735 seal skins—the value of which exceeded 500,000*l*., and the taking of which employed 60,000 tons of shipping; besides which there is the home consumption, amounting to nearly the same sum. It will thus be seen that the produce of the fisheries is one of our staple commodities, and the chief support of our foreign commerce.

"The committee on the fisheries, in the report to the house of assembly in 1843, says, that 'from returns laid before them it is apparent that in the eastern fishery, from the entrance of the Strait of Canso (that is, eastward of Halifax), including the island of Cape Breton, the inhabitants of Nova Scotia engaged as operative fishermen equal 5000 men, having upwards of 120 shallops and 1700 boats; and computing that an equal number are employed in the western and other fisheries of the province, an aggregate of 10,000 fishermen, 240 or 250 shallops, and 3400 boats, may be assumed as a fair statement of the fishing interest of Nova Scotia.' The same report says, that in the eastern fishery there are 10,000 nets employed, equal to 65,000*l*. in value. These calculations are small, and at any rate they exhibit the trade as not by any means so great as it should be.

"The facts we have now brought forward show the importance of this trade to the province, and we regret that it does not receive more attention than it has hitherto done. In the present depressed state of our provincial resources, it would be well to direct more of our energies to this branch of industry. The extent to which the inhabitants of the north-eastern province have been engaged in *ship building* has distracted our attention from it, and it must be allowed that we have not exhibited the same enterprise in this pursuit which our neighbours in the western parts of the province have done, and which our vicinity to the fishing-ground would enable us to exercise. *It is well known that large numbers of*

fish of various sorts, codfish, herring, mackarel, &c., annually visit the shores of this country, while scarcely any effort is made to turn them to advantage; and we have not the least doubt that some hundreds of industrious fishermen might be employed along this coast, by embracing the resources which nature has placed at our disposal."

According to the provincial returns, the exports of the produce of the fisheries from Nova Scotia were, during the present century, as follow, viz. :—

Taking the averages of the years 1805, 1806, and 1807, there were exported annually 81,191 quintals of dried fish, 43,299 barrels of pickled fish, 10,410 boxes of smoked fish, besides 652 smoked fish, such as salmon, &c.

In 1815, 1816, and 1817, 152,698 quintals of dried fish, 40,205 barrels and 170 kegs of pickled fish, 5675 boxes of smoked fish, and 379 smoked fish.

PRODUCE of the Fisheries Exported from Nova Scotia in the Year ending the 5th of January, 1833.

		£	s.	d.
160,640	Cwts. of dry fish at 10s.	80,320	0	0
37,154	Barrels of pickled fish „ 15s.	27,865	10	0

704	Tuns of oil „ 20l.	4,080	0	0
51,918	Seal-skins „ 1s. 6d.	3,893	17	0
Total		127,455	10	0

The number of ships employed in the trade was 570, and 640 boats.

In 1836, the shipments of cod, herrings, mackarel, salmon, and fish-oil, amounted to 186,908*l.*, viz., 262,245 quintals of dry fish, 47,517 barrels of pickled fish, and 490 tuns of fish oil.

In 1837, Nova Scotia exported 427,140 quintals of dry fish, and 64,803 barrels of pickled fish. The value of the exports of fish in 1837, was 181,961*l.*; this was chiefly dry cod, but embraced, likewise, a considerable quantity of salmon, mackarel, and herrings.

In 1838, 434,309 quintals of dry fish, and 94,855 barrels of pickled fish.

From returns made in 1840, the produce of the fisheries was estimated at 274,810*l.* sterling, viz., 327,501 quintals of dry fish, and 66,417 barrels of pickled fish.

In 1837, Halifax exported of the above quantity of dry fish, 190,486 quintals; pickled fish, 28,646 barrels.—In 1838, dry fish, 201,826 quintals; pickled fish, 43,438 barrels.—In 1839, dry fish, 251,092 quintals; pickled fish, 51,035 barrels; while the custom-house returns from Arichat and Sydney, in the island of Cape Breton, show the exportation to be 41,328 quintals of dry fish, 10,794 barrels of pickled fish, 270 casks of oil; and the following quantities are fair estimates of the catch in other parts of Cape Breton, where no customs'-officers are stationed:—Strait of Canso, 2500; Port Hood, 500; Mahon, 2000; Marguerite, 5000; Cheticamp, 8000; Bay of St. Lawrence, 3000; Cape North, 4000; Inganiche and Low Point, 8000; Bras d'Or, 3000; Mainadieu, 4000; Louisburg, 5000; l'Ardoise, 6000; making 51,000—clearly evincing that this valuable branch of industry, under every disadvantage, is furnishing an export equal to one million

annually ; while the internal consumption of the province, with a population exceeding 200,000, may be fairly estimated at 300,000 quintals.

The island of Cape Breton is admirably suited for the fisheries. St. Ann's, the Great Bras d'Or inlet, Sydney, and Louisburg harbours, afford excellent and safe seaports in the neighbourhood of the fishing banks.

A small variety of herrings, exceedingly fat and delicious, frequent the shores of the Bay of Fundy in May ; and, about the end of the month, enter Annapolis Basin, where, on the shore of Clements, they have been caught in amazing quantities. They are usually smoked, or cured as red herrings, and packed up in boxes which hold each half a bushel, and contain about 200. A hundred thousand boxes of these have been exported during some years, but they are said not to be so plentiful as formerly.

In May, herrings of large size, full of spawn, arrive in nearly all the harbours of Nova Scotia, New Brunswick, Cape Breton, and the Gulf of St. Lawrence ; but these, although taken in great quantities, are poor, and not much esteemed. The spring mackarel are also lean, and not much valued, although they keep better than others in hot climates.

The fall herrings and mackarel are exceedingly fat, and much esteemed. The regulations, by legislative enactment, for inspecting the quality of fish packed up in the province, which must all be in new casks, have, although, complained of at first, established the preference for the pickled fish of Nova Scotia in foreign markets.

Crow harbour, and Fox island, both near each other, and within Chedebucto bay, have always (especially in autumn) been the great resort of mackarel and herrings. Nets are sometimes used, but the great bulk of the fish is caught with seines. These places, while the fishing season lasts, are generally the scenes of the most lawless disorder and licentiousness, occasioned by the violence of the fishermen contending for the best places to haul their seines ashore ; the pillaging of the fish ; the selling and drinking of rum ; the smuggling of goods by the Americans ; the exactions of those who possess the lands bordering on the shores ; and often from the mere spirit of spoliation and mischief. A ship of war has been occasionally sent round from Halifax to preserve some sort of order among the multitudes of men, boats, and schooners, that resort to these harbours, and certainly these fisheries, from their great importance, require protection, and the establishment of regularity for their governance. We are informed that within the last few years, mackarel have not been so plentiful, or that they have rather deserted the above resorts.

A novel method of catching mackarel was some time ago discovered by the fertile genius of the Americans. This method is, simply, on arriving over the fishing grounds, to cut up, in very small pieces, a quantity of old pickled herring, or mackarel, for the mincing of which the Americans have also invented an in-

strument, and, on scattering the same in the sea, round the vessel, myriads of mackarel appear near the surface, when they are caught, as fast as they can be taken in, with a rod and line, the hook being baited with a small piece of shark or mackarel. Sprinkling salt on the surface of the water is said to have the same effect, but it is more expensive.

The whale fishery, which was carried on formerly with spirit from Halifax, was revived some years ago, chiefly by the enterprising house of Samuel Cunard and Co., when two ships were fitted out, one for the Pacific, and one for the Brudrel bank, and, among the crews, were sixty young men, natives of the province. The success of these and other whaling ships has been extremely variable, occasionally successful, and at other times probably carried on with much more loss than profit. Nova Scotia is certainly as well situated for the whale fishery as the United States.

FISHERIES OF NEW BRUNSWICK.

The cod fisheries of this province are carried on chiefly within the Gulf of St. Lawrence, at Shippegan, and Caraguette, within the Bay de Chaleur, and to a moderate extent within the Bay of Fundy.

The salmon fishery at the mouth of the river St. John's, has often been very productive. The shore is divided into lots, and these are drawn for every spring by the freemen of the city, the most valuable being worth about 200 dollars per annum. During the month of June, from 500 to 1000 salmon are taken daily, and the price varies from fifty to sixty cents a piece. There is an excellent fish market at St. John's, which is supplied at all seasons of the year with the different kinds of fish taken in the bay.

The whale fishery, began a few years ago, is said to have been profitable. In May, 1841, the St. John's Mechanics' Whale Fishing Company declared a dividend of twenty per cent, and in 1843 the company declared a dividend of 20s. a share equal to about fourteen per cent—on 7l. 4s. paid up capital. These dividends prove the company to be in a prosperous condition and must be highly encouraging.

The value of exports from New Brunswick in 1837, include 34,677l. for train oil, and 30,550l. for fish, chiefly dry cod, the whole of which was shipped, chiefly, to Britain and the West Indies.

Comparative statement of the quantities and descriptions of fish, exported from St. John's, New Brunswick, during the quarters between the 5th of July and 10th of October, 1841 and 1842, respectively.

PRODUCE.	1841	1842
Allwices	2368 barrels.....	3601 barrels.
Pickled herrings	546 barrels.....	519 barrels.
Dry fish.....	21 casks and } 10 boxes, }	227 casks and 348 boxes.
Soused salmon.....	845 kitta	718 kitta.
Smoked salmon.....	132 boxes	118 boxes.
Pickled salmon.....	8 half-barrels.	35 barrels.
Smoked herrings	2499 boxes	1653 boxes.
Pickled mackarel	9 barrels.....	13 barrels.
Pickled shad	192 kitta	100 kitta.

The produce of the fisheries was valued, in the three years 1832 to 1834, as under:—

PRODUCE.	1832	1833	1834
	£	£	£
Cod fish	28,231	27,536	46,337
Salmon	2,448	723	2,397
Herrings	1,032	318	489
Mackarel	212	91	382
Allwives	298	325	
Fish oil	1,038	2,290	1,560
Total	33,291	31,283	51,165

The produce of the fisheries in the country of Gaspé and the Magdalen islands, in 1836, consisted of—cod, 100,542 cwts. ; cod oil, 37,162 gallons ; whale oil, 25,120 gallons ; besides salmon and other fish, the whole amounting in value to 86,624*L*.

The future success of the British American fisheries must depend upon markets. Those of Europe are not, at least for several years, likely to increase the demand for salted or cured fish. The cause of diminished use of fish being the relaxations daily increasing in the abstinence from eating meat on fast days, and during Lent, in Catholic countries.

CHAPTER IX.

FISHERIES OF THE UNITED STATES.

THE inhabitants of Massachusetts and of the other New England states began to carry on the fisheries, first, along the adjacent shores, and afterwards on the banks and coasts of Newfoundland and Nova Scotia. According to Mr. Pitkin's statements, before the revolutionary war, about 4000 of the inhabitants were employed chiefly in schooners and small craft, measuring about 20,000 tons. The average quantity of fish caught was about 350,000 quintals, value about 200,000*l*. When England acknowledged the independence of the old provinces, it was stipulated,

“By the 3rd article of the treaty of peace, between the United States and Great Britain, in 1783, ‘that the people of the United States shall continue to enjoy unmolested the *right* to take fish of every kind, on the grand bank, and on all other banks of Newfoundland ; also, in the Gulf of St. Lawrence, and at all other places, in the sea, where the inhabitants of both countries used any time to fish ; that the inhabitants of the United States shall have *liberty* to take fish of any kind on such part of the coast of Newfoundland, as the British shall use (but not to cure or dry them on the island) ; and, also, on the coasts, bays, and creeks of all other his Britannic Majesty's dominions in America ; and that the American fishermen shall have liberty to dry and cure fish in any of the unsettled bays, harbours, and creeks of Nova Scotia, Magdalen islands, and Labrador, so long as the same shall remain unsettled ; but so soon as the same, or either of them, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such settlement, without a previous agreement for that purpose with the inhabitants, proprietors, or possessors of the ground.’

"For this favourable article," says Mr. Pitkin, "in relation to the fisheries, as in the case of the boundaries, the Americans were indebted to the firmness of their negotiators, and particularly Mr. Adams, who knew their value and importance to his countrymen. The British negotiators, for a long time, refused their assent to this article, and particularly to that part relating to the coast fishery, and which acknowledged the *right* of the Americans to take fish, on the grand banks, &c., and at last insisted on inserting the word *liberty*, instead of *right*. Upon this, Mr. Adams grew warm, and declared to the British negotiators, he would put his hand to no articles, without satisfaction about the fisheries; he asked, 'whether there was, or could be, a clearer right? In former treaties,' he said, 'that of Utrecht, and that of Paris, France and England have claimed the right, and used the word. When God Almighty made the banks of Newfoundland, at 300 leagues distance from the people of America, and at 600 leagues distance from those of France and England, did He not give as good a right to the former, as to the latter? If Heaven, in the creation, gave a right, it is ours, at least, as much as yours; if occupation, use, and possession give a right, we have it as clearly as you; if war, and blood, and treasure give a right, ours is as good as yours.

"We have certainly been fighting in Canada, Cape Breton, and Nova Scotia, for the defence of this fishery, and have expended, beyond all proportion, more than you; if, then, the right cannot be denied, why should it not be acknowledged, and put out of dispute? Why should we leave room for illiterate fishermen to wrangle and chicanery?" The British negotiators finally yielded this last point, and agreed to the article.

"The New England cod-fishery was nearly extinguished during the war of the revolution. It recommenced at the peace of 1783, but does not seem to have prospered, for, in 1790, the legislature of Massachusetts represented to Congress the embarrassed state of this fishery.† In consequence of a report made by the secretary of state, 'a bounty was granted by the general government, on the exportation of salted fish, by way of drawback of the duty on imported salt; and afterwards an allowance in money was made to vessels employed for a certain number of months in this fishery. From this encouragement, and the happy effects upon trade and commerce, produced by the establishment of the general government, the cod-fishery increased until the commencement of the embargo and commercial restrictions, in 1808, and the war between the United States and Great Britain, which followed. The British government considered the shore fishery, as it was called, as a *privilege*, granted at the peace of 1783, and which was forfeited or done away, in consequence of this war, and, therefore, refused to re-grant it without an equivalent. In the negotiations for peace, some of the American commissioners were disposed to renew to the British the right of navigating the Mississippi, as an equivalent for the shore fishery, but a majority of them were opposed to it; and the Treaty of Ghent, and the commercial convention which immediately followed, were both silent on the subject of the fisheries.'"—*Pitkin*.

* Diplomatic Correspondence, vol. 6, pages 493 and 495.

† "In 1790, the Marblehead fishermen petitioned to Congress for relief. In their petition they gave an exact statement of the earnings and expenses of the fishing schooners of that town for the three years preceding. For the year 1787, each schooner earned 483 dollars, while, in 1788, each earned 456 dollars, and, in 1790, only 273 dollars. The annual average of expenses, including insurance, was 416 dollars, thus showing a gain of sixty-seven dollars for the first of these three years, of forty dollars for the second, and a loss of 143 dollars for the third year. It is estimated, that the duty paid on articles necessary for a vessel of sixty-five tons, and eleven men, amounted annually to 138 dollars. The amount of duty on molasses was set down at ninety-nine cents, while that on rum was just fourteen dollars! This petition, as well as others of the same nature, were referred to Mr. Jefferson, then secretary of state, whose report, the next year, may be regarded among our most able state papers. But that report concluded with an explicit recommendation, 'that the fisheries are not to draw support from the treasury.' In 1807, four vessels were fitted out at Newburyport, for the Labrador cod-fishery. These were the first vessels from the United States, that made their fares in the Esquimaux bay."—*Newburyport Herald*.

"Some United States vessels, which attempted to carry on the cod-fishery on the British colonial shores, as they had been accustomed to do under the treaty of 1783, were seized by British cruisers; but, by the convention of October 20th, 1818, it was agreed, 'that the inhabitants of the United States, in common with those of Great Britain, should have the liberty to take fish on that part of the southern coast of Newfoundland, extending from Cape Ray to the Rameau islands on the western and northern coast of Newfoundland, from Cape Ray to the Quiepen islands; on the shores of the Magdalen islands, and also on the coasts, bays, harbours, and creeks, from Mount Jolly, on the south of Labrador, to and through the Straits of Bellisle, and thence northerly indefinitely along the coast; but without prejudice to the rights of the Hudson Bay Company.' And the American fishermen were also to have liberty to dry and cure fish in any of the unsettled bays, harbours, and creeks, by the southern part of the coast of Newfoundland, above described, and of the coast of Labrador; but, where such parts should be settled, were not to dry or cure fish, without the liberty of the proprietors of the ground. And, by the same convention, the United States renounce any liberty before enjoyed or claimed by them or their inhabitants, to take, dry, or cure fish, on or within three marine miles of any of the coasts, bays, creeks, or harbours of any of the British dominions of America, not included within the above limits. They were, however, permitted to enter such bays or harbours, for the purpose of shelter or repairing damages, of purchasing wood and obtaining water, and for no other purpose."

The Americans follow two or more modes of fitting out for fisheries. The first is accomplished by six or seven farmers, or their sons, building a schooner during winter, which they man themselves (as all the Americans on the sea-coast are more or less seamen as well as farmers), and after fitting the vessel with necessary stores, they proceed to the banks, Gulf of St. Lawrence, or Labrador, and loading their vessels with fish, make a voyage between spring and harvest. The proceeds they divide, after paying any balance they may owe for outfit. They remain at home to assist in gathering their crops, and proceed again for another cargo—which is salted down, and not afterwards dried: this is termed

mud-fish, and kept for home consumption. The other plan is, when a merchant, or any other owning a vessel, lets her to ten or fifteen men on shares. He finds the vessel and nets. The men pay for all the provisions, hooks, and lines, and for the salt necessary to cure their proportion of the fish. One of the number is acknowledged master; but he has to catch fish as well as the others, and receives only about twenty shillings per month for navigating the vessel: the crew have five-eighths of the fish caught, and the owners three-eighths of the whole.

The first spring voyage is made to the banks; the second either to the banks, Gulf of St. Lawrence, or the coast of Labrador; the third, or fall voyage, is again to the banks; and a fourth, or second fall voyage, is also made, sometimes, to the banks.

QUANTITY and Value of Dried and Pickled Fish Exported from 1791 to 1843.

Hayti, and the Spanish and Danish West Indies, are the countries to which pickled fish has been principally exported from the United States. Of 102,770 barrels of pickled fish (herrings and mackarel) exported in 1831-2, there were exported to the Danish West Indies, 19,310 barrels; Dutch West Indies, 7612 barrels; British West Indies, 1992 barrels; Hayti, 29,476 barrels; Spanish West Indies, 21,560 barrels; and the remainder to various places. Of 42,274 barrels of pickled fish exported in 1840, there were exported to Danish West Indies, 5078 barrels; to Dutch West Indies, 3537 barrels; to Spanish West Indies, 12,672 barrels; to Hayti, 16,605 barrels; and the remainder to various places. The greater part of the pickled fish caught and cured by the fishermen of the United States is consumed at home.

The rivers of the United States, especially those of the New England states, are frequented by salmon, shad, and various other fish. The *shad* fishery is rather important.

Extract from report on this fishery:—

"The shad fishermen have been very successful the present season. It is estimated that 3000 barrels have been already taken in the Sound between Monomoy point and Bass river. The shad fishery on our shores was commenced by a few individuals four years ago. Now, between 200 and 300 men, principally from Connecticut, are engaged in it. The fish are taken with seines, of which two kinds are used; one made of great length and depth for the purpose of surrounding schools of shad where the water is from five to seven fathoms deep; and the other kind are fitted for meshing, the seine being trailed out from a boat or vessel, and the shad, in attempting to run through it, are caught by their gills. The long 'purse seines' require a crew of sixteen men to manage them, and are capable of holding an immense number of fish. Captain David Baker, took, at one haul, 200 barrels of shad, and Captain Judah Baker, also enclosed as large a number, but a shark broke through the seine, and made a passage for the shad to escape. Present appearances indicate that the taking of shad on our coast, will soon become as important a branch of business as the cod and mackarel fishery. We are informed that they have, at a certain season of the year, always been abundant in the waters of the Sound, but until recently, no means had been discovered for taking them in the open sea, in sufficiently large quantities to justify the expense of fitting out vessels on purpose to take them. It is believed that shad, like mackarel, in the spring, proceed northward along the coast, and that the fishermen, when they better understand their habits, will be enabled to follow

them as they now do the mackarel. They arrive in the Vineyard sound the last of May, or beginning of June, and then, as the weather advances, proceed northward along the coast as far as Nova Scotia. But the fact that they are taken very nearly as early in the rivers of Maine as in the Sound, seems to favour the supposition that they are a deep water fish, and only visit the coast in the months of May and June, to deposit their spawn."—*Hansard's Register for 1841.*

Salmon.—The rivers of Maine are those to which salmon resort more than to others. The *Portland Argus*, alluding to the salmon fishery of 1840, observes,

"Salmon are very plentiful this season. Dr. Drew of Augusta, says, that one morning lately, he noticed in the market, 150 that had been taken near our wharfs the previous night. Their weight, we should think, would be about seventeen pounds each. At ten cents per pound, this would make that night's fare worth 255 dollars. We understand that one has been caught in Bath this season, weighing seventy pounds. It was sent to Boston, for the epicures. They have been sold as low as eight cents per pound, though the price, when they first appear in market, is one dollar per pound."

MACKAREL FISHERY OF THE UNITED STATES.

This fishery is carried on chiefly from the New England states—chiefly from Massachusetts. In the ports of which there were inspected the following number of barrels of mackarel, during the years 1838 to 1842 inclusive, viz. :

TOWNS.	No. 1.	No. 2.	No. 3.	TOWNS.	No. 1.	No. 2.	No. 3.

The following sketch is interestingly descriptive of the mode of fishing at sea for mackarel.

Extract from "A Journal of a Mackarel Cruise:"—

"On the 6th of July, a fair wind carried us beyond the bar of Newbury port; in a few moments, and we were soon rolling and tossing on the briny deep. Before dark a thunder storm arose, which lasted all night.

"We sailed south, and on Friday morning was sixty miles south of Nantucket, but did not fall in with any mackarel until Saturday, when we were called to our lines before dawn of day, by the skipper, who, holding the morning watch, had discovered that there was a *scool* around us. They bit well for about *three-quarters of an hour*, and we salted seven barrels that morning. It was at this time that I learned the process of taking them.

"Every person has two lines, with two hooks on each, and even when the fish are most plentiful, an experienced hand can with perfect ease tend two lines, while a tyro finds difficulty in preventing one from becoming entangled, as he draws in the fish or throws the line out again. Mackarel always go in *scools*, but it is not every *scool* that will bite; when they will not bite they are said to be '*scooling*.' In this case, they are seen in large numbers, with their heads nearly out of water, swimming with great swiftness, sometimes in a direct line, and sometimes round and round, having the appearance of being frightened. A *scool* can be seen half a mile distant, and whenever one is perceived, the vessel endeavours to 'run into it,' and stop it by throwing bait among them, which they some-

times succeed in doing. This bait, which is used for the purpose of keeping the *scool* about the vessel, consists of other fish taken on board in port, and salted. It is ground up very fine in a 'bait mill,' and always used while fishing. The hooks are baited with a small piece of fish taken from the throat of the mackarel that are caught, and when this cannot be procured, with pieces of pork. They bite very quick, much like a pickerel, and must be drawn in the instant they are felt touching the hook. There is no mercy shown to the fish after he is taken; by a sudden jerk of the line the hook is torn from his mouth, and he falls into a barrel or on deck. Frequently, after they cease biting, the remainder of the *scool* is seen swimming about near the surface of the water, in which case, they are 'gaffed,' or hooked up, with an instrument called a 'gaff,' which is an iron or steel rod, two feet long, bent at the end like a hook, but without a beard, and attached to a pole about six feet long. When the fish have all disappeared (probably sunken), the fishermen proceed to dress, wash, and salt those caught, which is done with such despatch by those practised in the business, that in *less than an hour* after we had ceased fishing, seven barrels were salted, and the crew's work ended for the day.

"Mackarel seldom ever bite except early in the morning, or just at night, and since they are not found every day, there is much leisure time on board a fishing vessel, which is the dulllest part of the voyage. Such time is employed by the crew in making miniature vessels, catching various kinds of fish for amusement and to eat, and in sleeping. The fishing business is very uncertain; one may fall in with mackarel, and return home fully laden with them in four or five days, or may cruise about till the stores are all exhausted, without finding any.

"We coasted along Cape Cod for about three weeks, catching a few mackarel now and then, but found them rather scarce, and what few there were, very small. Cape Cod is, from the water, the most dreary looking place that I ever saw. As you sail along you see nothing but a sand bank, with two or three huts upon it, which have been erected for the benefit of shipwrecked sailors, who might chance to be washed on shore alive. It is no terror, however, to fishermen, as they are not there during the stormy part of the season. The greatest danger fishermen are in, is of being run into by other vessels during a fog, which is sometimes so thick that you can see but little more than the length of the vessel. Such an accident occurred to a vessel that was near us almost all the trip, and she was obliged to put into the nearest port.

"One morning, the skipper spoke a vessel from the Bay of Chaleur, with 100 barrels of mackarel, that reported them plentiful in that bay. The skipper, thinking it was not best to remain there when he heard of mackarel elsewhere, immediately set sail and steered for home, to take a new fit-out for the Bay of Chaleur. The next day we were alongside of the wharf we sailed from. Thus it is with fishermen, whenever they hear that mackarel have been caught in any other place, they all set sail for the spot, but nine times out of ten, they learn, too late, that the fish are somewhere else. Many fishermen have (as I am told) been living almost entirely upon hope, for two or three years past, expecting soon to find mackarel plenty, and to catch their share of them. Some, last year, did not catch the amount of fifty barrels, which would not pay their outfits. They are led to suppose that they shall do well before long, because there was *once* a time when they found mackarel plenty, and, because even now, occasionally a vessel is fortunate enough to make a good trip. But the business must, undoubtedly, be dropped by many of them, for it is evident that mackarel are pretty well caught up, and will never again be so plenty as they have been.

"If any class of people ought to be well paid for their labour, it is the fishermen, for theirs certainly is a hard life. As they go in small vessels, they cannot enjoy even many conveniences that seamen do on board large vessels, and they are obliged by necessity, to live among much filth. They cannot carry with them a great assortment of provisions, and being out almost all the summer season, they are deprived of fruits and many of those productions of the soil, which in the season of them, furnish landmen with so many luxurious dishes."

LAKE AND RIVER FISHERIES OF THE UNITED STATES.

The fisheries of the lakes, and especially of Lake Huron, are of very considerable value. The following account of those fisheries is extracted from the *New York Merchants' Magazine* for 1842.

"The larger lakes, as well as the interior waters of the state, abound in fish, some of them of the most valuable sorts, which are now taken in Lake Superior during the summer by the American Fur Company, whose traders are found scattered at widely separated points along its shores. Among those of a superior sort are the Mackinaw trout, the white fish, sturgeon, salmon trout, muskelunje, pickerel, pike, perch, herring, the rock bass, the white and black bass, catfish, trout, and gar, which constituted, during the earlier condition of the country, a very valuable article of food, as they do now of commerce. Among the most prominent of these are the white fish, which are not only peculiar to the lakes, but from the first colonisation of the territory by the French explorers, have been highly celebrated; large quantities of trout, as well as the white fish, are taken upon the lakes and shipped to Ohio, New York, and Pennsylvania.

"The subjoined statement derived from the *Detroit Daily Advertiser*, exhibits the progress of the lake fisheries at different periods, from 1835 to 1840:—

"With the immense business which is destined to be done on the western lakes, that of the fisheries should not be overlooked, as it has already become a considerable item of exports. The number and varieties of fish taken, are worthy of notice, and it is stated that no fresh waters known, can, in any respect, bear a comparison.

"From the earliest period of the settlement on the shores of the lakes, fishing has been carried on to supply the inhabitants with a part of their food, but not until the past five years has fish become an article of export. Since that time, the business has rapidly increased. The number of barrels taken, so far as information can be gathered, in 1835, was 8000, and in 1840, it reached 32,005 barrels.

"The weight to which some of the fish attain is unparalleled, except in the Mississippi—as follows:—

NAMES OF FISH.	Greatest Weight.	Average.	NAMES OF FISH.	Greatest Weight.	Average.
	lbs.	lbs.		lbs.	lbs.
Sturgeon	120	70	Perch	1	
Trout	60	10 to 2	Roach	1	
Muskelunje	40	10 " 15	Black Bass		2 to 3
Pickerel	15	5 " 6	Bill fish		6 " 8
Mullet	10	3 " 6	Catfish		10 " 20
White fish		2 " 3	Sisquoele		8 " 10
At the Sault Ste. Marie		4 " 5			

"The varieties usually taken for pickling, are trout, pickerel, white fish, and sisquoele; the latter, however, is to be found only in Lake Superior.

"Since the projected canal at the Sault Ste. Marie has been suspended, Yankee enterprise, at great expense, in the absence of artificial locks, has surmounted the difficulty of getting over the falls leading from Lake Michigan to Lake Superior, and within the two past years, two vessels, by means of slides, rollers, &c., have reached the upper lake.

"Three vessels have, also, been built on Lake Superior by the American Fur Company. The two former vessels will hereafter be engaged in the fishing trade, in freighting salt, provisions, &c., to various points on the lakes, and returning with fish. Heretofore the American Fur Company have monopolised the trade. This will open a new era in the upper lake fisheries, as they are said to be inexhaustible.

“ ‘ From the following table, of the amount of fish barreled, which was obtained from various sources, the rapid increase of the business will be seen :—

	1836	1837	1840
	barrels.	barrels.	barrels.
Lake Superior.....	2,000	5,500	10,000
Mackinac	1,200	800	4,000
Sault Ste. Marie	300	600	2,555
Green Bay.....	600		
Various points on Lake Huron.....	500		
Fort Gratiot	3,100	4,100	3,000
Shores of Lake Huron	800	600	
On Detroit River	4,000	2,500	3,350
Shores of Sanilac County	500
St. Clair River	1,000
Drummond's Island	800
Twin Rivers	1,500
Mouth of Manistee River	1,000
Sheboygan River	275
Racine River.....	225
Saginaw Bay	500
Thunder Bay.....	500
Beaver Island	500
South Saginaw Bay	500
Total	12,200	14,100	35,005

“ ‘ The average price of fish, per barrel, for the past five years, in Detroit, is eight dollars, which gives a total value of the business, in 1840, at 256,040 dollars. Thus, in its infancy, it adds this large amount annually to the wealth of Michigan.’ ”

In the Mississippi and other rivers, various fishes, which we have already described, abound. Of some of the lakes near the delta of that river, the following account is curious :—

“ One fact, however, distinguishes the summer of 1839. It is the drying up of the lakes in the Mississippi swamp—at least in that portion of it in Adams county, extending from below Natchez to Ellis' cliffs, north and south, and from the highlands of St. Catharine creek to the Mississippi river, east and west. This occurrence, so far as the writer's inquiries extend, is unexampled, and is, at least, a striking proof of severe drought. In company with a friend, on a hunting excursion of a day or two, in the last week in September, we visited several of these lakes. They are almost entirely dry, and can be crossed anywhere on horseback. They form beautiful meadows of various extent, from 100 yards to 200 yards in width, and from half a mile to two miles in length, covered with luxuriant and tender grass.

“ *The myriads of fish that once swarmed in these lakes, have all perished.* As the water recedes to the centre, they naturally crowd to that point, and as these reservoirs fall, also, the eagles and vultures, and fish eating vermin of all kinds, flock in vast numbers, to such a feast as is seldom spread to them. In the deeper and larger lakes, a few inches of water were found in the centre, not sufficient to cover the dying fish, and stained with blood drawn from them by the talons of their ever vigilant and insatiable foes. The remains of those that were dying and bleaching in the sun, covered large spaces, and presented to the eye an appearance, to use the words of an old hunter, ‘ like leaves after a frost.’

“ These lakes have, for ‘ time, whereof the memory of man runneth not to the contrary,’ been the habitation of numerous species of fish, from the *grim garr*, that shark of these fresh waters, to the diminutive *pan-fish*. The winter rains will again restore water to their basins, but another great overflow of the Mississippi can alone supply them with their ordinary inhabitants. Even the amphibious alligator will have small temptations to return to them ; for his usual supply of provision has failed. At present, they are covered with an exuberant coat of grass, without any object to interfere with the view, extending, in some of them, almost as far as the eye can reach. Upon these meadows the cattle and horses find a plentiful subsistence ; and the venison of this season is uncommonly fat and delicate, owing to the superabundance of pasturage.

“ It will suggest itself to the mind of a medical man that millions of fish, thus perishing, and corrupting, must affect the atmosphere. Such is the fact ; and before reaching the open bed of the lakes, the effluvia becomes extremely offensive.”—*Hansard's Register*.

CHAPTER X.

WHALE FISHERY OF THE UNITED STATES.

THE Norwegians were accustomed at an early period to capture whales. But they only did so, as they now do in the Orkney and Shetland islands, when whales arrived casually on the coast or in the bays. The Biscayans were the first people who pursued the whale fishery as a regular business. They carried it on with energy, perseverance, and success, from the twelfth to the fourteenth century. The voyages of the Dutch and English to the Northern Ocean, for the purpose of discovering a passage to India discovered multitudes of whales in those seas, which led the Dutch and English to enter upon the northern whale fishery. During the middle of the seventeenth century, houses were established upon the northern coast of Spitzbergen, and provided with tanks, boilers, and all other necessary apparatus for the purpose of boiling the blubber, and preparing the bone for market. A town with shops and taverns arose in consequence. The town disappeared with the whale fishery. The Dutch whale fishery was in its most prosperous state during the year 1680, when it employed about 260 ships, and 14,000 sailors. The English whale fishery was carried on by an exclusive company, like that of Holland; and in 1725 the South Sea Company embarked in the whale fishery, and prosecuted it with vigour for about eight years, and then abandoned it, with considerable loss. The French and some other nations embarked in the pursuit with great success.

It is recorded in the second volume of the "Philosophical Transactions," in a letter from Mr. Richard Norwood, who resided at the Bermudas, "that the whale fishery had been carried on in the bays of those islands for two or three years. A year or two afterwards, the whale fishery was proposed by a Mr. Richard Stafford, who remarks that he had killed several black whales himself. 'I have been,' says he, 'at the Bahama islands, and there have seen of this same sort of whale (the spermaceti) dead on the shore, with *sperma* all over their bodies! Myself and about twenty others have agreed to try whether we can master and kill them, for I never could hear of any of that sort that was killed by any man, such is their fierceness and swiftness.' 'One such whale,' said he, 'would be worth many hundred pounds.'"* New Providence, in the Bahamas, became soon afterwards distinguished as a whale fishing station. Before the English colonists killed whales in America, "the Indians upon the shores of North America were accustomed to adventure out from the coast in their canoes, and pierce them with their lances, or other instruments of the same kind, which were fastened to blocks of wood by strings. These blocks were thrown overboard the moment

* See Philosophical Transactions, vol. iii.

that the instruments penetrated the body, and the attacks thus made appear to have been renewed the moment the whale showed himself on the surface, so that these monsters were finally worried to death. The attacks thus made by these imperfect instruments seem, however, to have been generally directed upon the young ones near the shores, that were towed to the coast, and the fat taken off from only one side, as they possessed no knowledge which would enable them to turn over the animal. It is obvious that the larger sort of whales must have effectually resisted the attacks of the savages with such rude weapons, and the demand for the oil, which, upon the northern part of the continent, they were accustomed to use as food, was but limited.”*

The New England, or American whale fishery, was commenced in the island of Nantucket. It was colonised by an adventurous and hardy race of settlers from other parts of Massachusetts. The origin and progress of the New England whale fishery is related as follows, in the *Merchants' Magazine*:—

“It appears that one of the species called ‘scragg’ was descried in the harbour of the infant colony, where it remained spouting and gambolling around the shore for three days. Measures were soon adopted by the settlers, who were the original purchasers of the island, for its capture. An harpoon, rude in its form, was invented and wrought; and, after a severe contest, the monster was taken. The success of this adventure induced the people of that place to commence the enterprise of taking whales as a regular business, these animals being at that time very numerous around the coast; and, as early as 1672, we find the inhabitants entering into a formal contract with James Lopar, in which he engages to carry on the ‘whale citching’ jointly with the town, for two years, on their giving to him ten acres of land in some convenient place, with commonage for two cows, and twenty sheep, and one horse, together with the necessary wood and water. The town were, by this contract, bound to carry on two-thirds of the business, and himself the other third. This company was to have the monopoly of the trade, and no other company was permitted to engage in the traffic, unless they should tender to this first organised body a portion of its shares. It was also provided, that ‘whosoever kill any whale of the company or companies aforesaid, they are to pay to the town, for every such whale, five shillings.’ John Savage, a hardy New England man, was also procured to settle upon the island in the capacity of a cooper, upon nearly the same terms which had been made by the proprietors of the town with Lopar. We may suppose that the profits of this crude frame of enterprise were small, but they were at least sufficient to induce the prosecution of this species of traffic.

“Meanwhile, the people of Cape Cod had reached considerable proficiency in this branch of enterprise, and their success induced the fishermen of Nantucket to adopt more vigorous and systematic measures for its prosecution. Accordingly, we find the inhabitants employing Ichabod Paddock, as early as 1690, to instruct them respecting the best manner of taking the whale, and extracting the oil. The whaling expeditions from that port were then carried on in boats from the shore, and the white colonists derived important aid from the Indians, who manifested extraordinary aptness for the fishery of all kinds, and, being placed in responsible stations as boat-steerers and headsmen, they soon became experienced and valuable whalemén. These boats, in search of their game, often ventured even out of sight of the land during the pleasant days of winter, and performed feats which are scarcely exceeded in our own day. After the whale had been killed, he was towed ashore, and an instrument, termed a ‘crab,’ and which was similar to a capstan, was used to ‘heave off’ the blubber as fast as it was cut. This blubber was then placed upon carts, and conveyed to ‘try-houses,’ situated near their dwellings, where the oil was boiled out, and prepared for market. For the purpose of enabling the fishermen to descry whales at a distance, a high spar was erected upon the shore, with cleats affixed to the top, where the whalerman,

* Hunt's Magazine.

with his spy-glass, could be securely lodged, and command a broad view of the ocean. No sensible diminution of the whales upon the coast appears to have existed from the first thirty years of the fishery, although eighty-six were taken near the shore during the year 1726, and eleven were sometimes towed to the land in one day.

"We are informed that the first spermaceti whale, known to the inhabitants, was found dead and ashore upon the south-western part of the island; and here arose several conflicting claims to the right of property in this dead monster; the Indians claiming it by right of finding; the whites, on the ground of their ownership of the island; and the officer of the crown seizing it by virtue of the well-known principle of the laws of England, giving to the king certain property which is discovered to have no visible owner; and, in discussing which, Mr. Justice Blackstone, if we remember right, specially designates a stranded whale. The matter was, however, at length adjusted, and the white men who first found it were permitted to hold the property, the whale having been previously divested of his teeth.

"To Christopher Hussey, a Nantucket whaler, belongs the honour of capturing the first spermaceti whale, and his feat was performed during the year 1712, so far as can be ascertained. This man, while cruising near the shore for 'right whales,' the species which had been the principal kind captured by the Nantucket whalers, was blown off from the shore, and falling in with a school of that species, he succeeded in capturing one and towing him into port. This event gave a new impulse to the whale fishery upon the ocean, for vessels of thirty tons were soon built for the purpose of extending this traffic. These vessels were fitted out for cruises of about six weeks, and carried a few hogsheads capable of containing the blubber of only one whale, which, after they had captured, they returned home, when the owners took the blubber and prepared the oil for market, despatching the ship upon another voyage. The boiling was done in try-houses, which were erected near the landing, and the outfits and apparatus were placed in warehouses, situated near the same place. The substitution of vessels for boats constituted a new epoch in the expeditions of these Nantucket whalers, as the whales were expected to be diminished; and, in 1715, the number of vessels engaged in the whaling business from this port was six, all of them sloops of from thirty to forty tons burden, and producing 1100*l.*, amounting in our currency to 4888 dollars, 88 cents.

"Such was the germ of the whale fishery in this country, and circumstances transpired which were calculated to extend its operations. Larger vessels were soon introduced as motive for the business increased, and the enlargement of their number of course required an additional number of men, so that the island could not furnish the force to man their ships. This deficiency was, however, supplied by seamen from Long island, as well as various parts of Cape Cod. But the consumption of oil did not increase with the augmentation of the number of the ships and the quantity of oil which was obtained. Indeed, the domestic sale was frequently dull, and the whale fishermen began to look to a foreign market. Boston at this time, furnished the chief depôt for the oil of the Nantucket whalers, and it was customary for the merchants of that city to order large quantities of whale oil from Nantucket, and to export it to England in their own vessels, from which traffic they derived a considerable profit, the oil of the island having obtained a very high reputation in Europe. This fact aroused the people of Nantucket to their true interest, and they immediately adopted measures to export the products of the fishery themselves, and accordingly to reap the profits. But although the prospects of success appeared bright, they moved with great caution in this matter, knowing that the failure of their enterprise would be attended with disastrous consequences. Accordingly, about the year 1745, a small vessel was loaded and despatched to Europe with a cargo of oil. The expedition was successful, and their shipments to England and other foreign ports were increased. This new field of enterprise was attended with a double advantage, for while they secured large profits on these voyages, it was found that the articles in the foreign ports to which their ships were consigned, consisting of iron, hardware, hemp, and sail-cloth, were precisely of the kind which they wanted for the trade, and, being purchased at a cheap rate, they were admirably adapted to their return cargoes.

"But in the year 1755, the loss of several fine ships, with their crews, by the perils of the sea, or by capture—for it is well known that we were then at war with France—

threw a temporary blight over the traffic, although it continued to increase. The ships were enlarged in size, from thirty to 100 tons burden and more, as whales had become scarce upon their own ranging grounds near the shore, and larger vessels were required to advance further into the ocean. A number of the larger class of vessels was despatched to Davis's straits and the Western islands, being provided with complete outfits, and, while a few made great voyages, others came home 'clean,' from the ignorance that then prevailed respecting the courses of the winds, the proper feeding-ground of the whales, and of all those other facts which could only be acquired by experience. Whaling continued to be the main occupation of the inhabitants of that island, while the attempts which were made to carry on this pursuit in other parts of the country, appear to have failed.

"Another fact tended to diminish the profits of the whale fishery at that time. The English government, discovering that oil was far preferable to other light, being better adapted to common use, and less expensive, became anxious to increase that branch of commerce from her own ports, and, in consequence, granted a large bounty to this species of industry. By that means it was much enlarged, and London soon became an important whaling port. The necessary consequence of this measure was to cut off Nantucket from a considerable portion of its foreign market; yet the American whale trade was not sensibly diminished, as its consumption was enlarged in various parts of the world, and even the exportation to England continued to be carried on. As new coasts were explored, the field of the whale fishery became enlarged, and the American whale fishermen adventured widely into the ocean for their favourite game. The places at which the whale fishery commenced, and the periods when it was begun, prior to our revolution, we have in the subjoined table, which is believed to be accurate:—

"At Davis's straits, in the year 1746.

"The Island of Disco, in the mouth of Baffin's bay, in the year 1751.

"Gulf of St. Lawrence, in the year 1761.

"Coast of Guinea, in the year 1763.

"Western islands, in the year 1765.

"Eastward of the Banks of Newfoundland, in the year 1765.

"Coast of Brazil, in the year 1774.*

"Besides these places, whaling voyages were carried on to a considerable extent, although for a shorter period, upon the Grand Banks, Cape Verd islands, numerous points of the West Indies, the Bay of Mexico, the Carribean sea, the coast of the Spanish Main, and various other parts of the sea. The amount of enterprise invested in the traffic at different periods, and the profits of the voyages at this early stage of the fishery, may, perhaps, be interesting at the present time, exhibiting as they do the progress of the trade in this country.

THE Number of American Ships employed, and Oil produced from the Catch, for Ten Years.

Y E A R S.	Vessels.	Barrels.	Y E A R S.	Vessels.	Barrels.

"It appears, also, that the price of whale oil in England was, in 1742, 18*l.* 13*s.* per ton; in 1743, 14*l.* 8*s.* per ton; in 1744, 10*l.* per ton; and in 1753, 21*l.* per ton.

"From the year 1771 to 1775, the whale fishery increased to a most important extent, and the hardy islanders of New England, who formed the whaling companies, were mechanics, who manufactured the cordage, the casks, the sails, the iron and wood work of the ships, and even built the ships for the whale fishery. According to Mr. Pitkin, Massachusetts alone, during that space of time, employed annually 183 vessels, of 13,820 tons

* See History of Nantucket, by Obed Macy.

burden in the northern whale fishery, and 121 vessels, of 14,020 tons in the southern, which were navigated by 4059 men; the produce of the fishery at that time amounting to 350,000*l.* lawful money, or 1,160,000 dollars. At this time, a large portion of the spermaceti oil was sent to England in an unseparated state, the head matter being generally mingled with the body of the oil, commanding, as it did, the same price when in a mixed, as in a separate state. A considerable portion of the oil procured from the right whale was shipped to Boston, or other parts of our American colonies, for inland consumption, or was exported to the West Indies. The manufacture of sperm candles, which was first commenced in Rhode Island, in 1750, was carried on to a considerable extent in New England and Philadelphia, and tended to furnish a motive for the fishermen to procure this species of matter. We here append a table, showing the amount of American whale fishery from 1771 to 1775.*

STATE of the Whale Fishery in Massachusetts, from 1771 to 1775.

"A few years previous to the revolution, the average price in market for spermaceti oil was about 40*l.* per ton, and for head matter 50*l.* per ton. Common whale oil was about 15*l.* per ton, and the bone was worth about 2*s.* 4*d.* per lb.

"The 'Massachusetts' Bay Restraining Bill,' tending to restrict the commerce of New England, excluded their whaling ships from the banks of Newfoundland; but a special relaxation of the law was made in favour of Nantucket, on account of a petition from the island to that effect.

"Nantucket was found, after the revolutionary war, the principal mart of the whale fishery, in an impoverished condition. The 150 vessels which it owned at the commencement of the war, were dwindled down to a few old hulks, and the grass grew green in the streets; but the characteristic energy which had marked the enterprise of its sturdy settlers, soon exhibited itself upon its old field, the ocean, and the sound of the broad-axe and the hammer were again heard in its dockyards, building and refitting new vessels for its favourite enterprise. In 1785, the business promised great profits. The articles required for the outfits were low, while the price of oil was high. This state of things continued only a short time, for in the latter part of the succeeding year, crude sperm oil sold for 24*l.* per ton, and head matter scarcely commanded 45*l.* per ton. Measures were soon adopted to petition for its protection, and a bounty was granted by the commonwealth of Massachusetts, of 5*l.* for every ton of white spermaceti oil, and 60*s.* for every ton of brown spermaceti oil; for the purpose of encouraging the business, many persons in other parts of the country, were induced to embark in the whale fishery, thus increasing the quantity in this country, and diminishing its value. But the consumption was not sufficiently large to make its procurement very profitable; and the encouragement to this commerce which had been given by England, and the consequent quantity carried by their own mariners into that country, cut off American whaling merchants from British markets, especially as

* Pitkin's. Hunt's Magazine.

duties were required to be paid for its importation to Great Britain, after the war of the revolution."—*Hunt's Magazine*.

"Halifax, in Nova Scotia, affords an excellent harbour, opening directly from the Atlantic, and it was thought that a good market would be there provided for whale oil. Inducements were held out to the people of Nantucket to remove there, in 1786 and 1787, and a considerable number settled on a spot opposite Halifax, called Dartmouth, when there were built dwelling-houses, wharfs, spermaceti candle manufactories, stores, and dockyards. Here they carried on the whaling business for several years with success, but were finally induced to remove to Milford Haven, in the west of England, there to prosecute the whale fishery. Nantucket suffered considerably by this settlement, having lost some of its most active and enterprising whalemén, still the auspices of the whale fishery grew brighter, oil advanced in price, the number and size of the ships were increased, their voyages were extended, and the vessels from that port which had confined themselves to the West Indies, the coast of Guinea, and different parts of the shores of North America, now extended their ranging grounds to the banks of Brazil, where right and sperm whales were very numerous. The manufacture of sperm candles was increased, and large quantities were not only consumed in this country, but also exported to the West Indies. About this time the domestic consumption of oil was much extended by the establishment of light-houses, and the introduction of machinery into the country; one branch of domestic industry thus aiding the other. In fact, the enterprise invested in this labour was enlarged to such a degree, that the little island of Nantucket, could not furnish sufficient seamen to carry on the whaling voyages from her own port, and many Indians and negroes were imported from the continent, who resided on that island, and became some of the most valuable and active agents of the whale fishery."—*Hunt's Magazine, Pitkin*.

"In 1790, the attention of the people of Nantucket was directed to the seal fishery, profitable voyages for the capture of these animals having been made previously from England, the seals being found upon the same coasts as the whales, and requiring the same outfits and men. The first expedition fitted out from New England was for the coast of Africa. It was not successful, but laid the foundation of a business which has been since prosecuted with energy and profit. During the succeeding year, a number of successful cruises having been made by the English vessels upon the western coast of South America, these foreign enterprises induced the people of Nantucket to range with their ships upon the same coast, and whaling ships then first adventured from this port to the Pacific Ocean, and almost invariably returned with full cargoes. The success of the whalemén of Nantucket in the whale fishery induced the people of the neighbouring settlement of New Bedford, which has since arrived to great opulence by this traffic, to increase the number of their whaling ships; and, in 1792, they had enlarged their adventures to a considerable

extent. The market for oil was at this time also very much extended in France; lamps were sent into that country from England, to encourage its use; and large shipments were made from the United States, which proved profitable; but the revolution that afterwards broke out in that country swallowed up all foreign enterprises. The period which the historian of Nantucket has denominated its 'golden age,' was soon turned to an age of bronze by the circumstances of the period, for while the French revolution effectually prevented the importation of the article into that country, most of the foreign markets became glutted; the price of oil in foreign ports fell below that for which it could be obtained in Nantucket, the provisions required for the outfits advanced in value, and ruin stared the whalemén in the face. In addition to these disastrous circumstances, war between France and the United States was expected while the whaling ships afloat were out upon long voyages, and commercial disaster, like the foreboding twilight of an eclipse, overshadowed this important branch of the commerce of the country.

"But notwithstanding all the difficulties which followed, we learn that in 1810 most of the business capital of the island of Nantucket was at sea, and, during that year, six or eight ships were fitted out from that port for the Pacific Ocean. But dark clouds now gathered again upon the commercial sky, and a war with England was threatened. The people who had been engaged in the traffic were soon deprived of the means of subsistence; and, while the motives for adventure in the traffic diminished, the premiums of insurance arose to twenty per cent. Two years afterwards, an embargo was laid upon our commerce, which restriction is generally a sure presage of war. Seven-eighths of the capital of Nantucket were afloat, three-fourths of which were not expected to return for a year; and so great was the apprehension of the declaration of war, that a formal petition was despatched to the British government by the people of Nantucket, through Admiral Cochrane, asking protection for their commerce, and expressing a willingness to remain neutral in the belligerent operation which succeeded. But all this was of no avail, and the navigators of that island, diverted from their ancient business, were left to starve, or to gain a scanty subsistence by fishing around the coast, or by cultivating its barren soil.

"At the close of the war of 1812, the country, it is well known, was involved in one common wreck; but the elastic energies of the nation revived, and the whale fishery was commenced upon a new foundation, and has been advancing with a gradual and solid growth to the present time. During the year 1819, it was extended to many points along the coast of New England; and whale ships were fitted out from New York, Long Island, New London, New Bedford, Cape Cod, and Boston, which have been increasing to the present day, constituting a source of great wealth to the beautiful settlements that are scattered along our northern maritime shores, as monuments of the liberality and enterprise of that high-minded class of men, our American whaling merchants. The growing population of the country, and the increased consumption of the articles produced by the whale fishery from the introduction of machinery; and the multiplied branches of trade requiring them, together with the more efficient organisation of this enterprise, and the security to its prosecution furnished by the strength of our government, will render it in coming time, as it now is, a lucrative and permanent field of commerce."—*Hunt's Magazine*.

According to Mr. Pitkin, the whole number of vessels engaged in this fishery, in the winter of 1834, was 434, of which, about 384 were ships, and fifty barks and brigs.

The greatest part of these, belong to New Bedford, and Nantucket, and New London. The following is the number of vessels, in these three districts, with their tonnage, and number of men employed, furnished us by the collectors of these districts.

DISTRICTS.	No. of vessels.	Tonnage.	Men.
New Bedford	181	56,352	4445
Nantucket	76	264,72	1860
New London.....	41	11,251	1081
Total.....	298	94,075	7392

" The remaining number, being about 136 from the best information obtained, belong to the following ports :—

PORTS.	No. of vessels.	PORTS.	No. of vessels.
Sag Harbour	23	Portsmouth	6
Falmouth	6	Bridgeport	1
Warren	12	Newburyport	3
Bristol	13	Edgerton	6
Newport	6	Salem	5
Hudson	11	Boston	4
Providence	2	New York	5
Fall River	2	Wareham	1
Poughkeepsie	3	Portland	1
Plymouth	5	Wiscasset	1
Gloucester	2	Greenport	2
Newburgh	3		

" The number of vessels employed in the sperm fishery, from New Bedford, was 112, with a tonnage of 37,163, and 2828 men ; and from Nantucket was sixty-nine, with a tonnage of 24,216, and 1684 men. The number, from the other ports, in the same fishery, may be estimated at about eighty, making the whole number, in the sperm fishery, about 261, and in the right whale fishery, about 170.

" The value of the ships employed in the former, with their outfits, has been estimated, by those well acquainted with the business, at 30,000 dollars each ; those in the latter, at 15,000 dollars, and the barks and brigs may be estimated at 10,000 dollars. The following, therefore, may be deemed the value of all the vessels, employed in the whale fishery from the United States, about the 1st of January, 1834, including their outfits.

	dollars.	dollars.
261 ships, in the sperm fishery at	30,000	7,830,000
120 " " right whale fishery "	15,000	1,800,000
50 barks, brigs, &c. "	10,000	500,000
Total		10,130,000

" The entire tonnage of the whaling vessels, in the districts of New Bedford, Nantucket, and New London, as above stated, was 94,075 ; and if we estimate the tonnage of the vessels, in the other ports, in the ratio of the number of vessels, in these three places, the whole tonnage employed in the whaling business, may be stated at 136,000, which is not far from one-tenth of the whole tonnage of the United States ; and by the same ratio, the whole number of men employed, would be about 10,900. The men usually have for their shares, three-tenths of the earnings.

" In 1830, it was calculated, that the following, among many other articles, were consumed by the whale ships.

" Thirty-six thousand barrels of flour ; 30,000 barrels of beef and pork ; 18,000 bolts of duck ; 6,000,000 of staves ; and 2000 tons of cordage.

" The consumption of these articles, as well as others, must have increased since that period.

" About one-half of the common whale oil, finds a market in Europe, one-quarter in the West Indies and South America, and the other quarter in the United States.

" Nearly the whole of the spermaceti oil is consumed in this country ; from one-quarter to one-third being used in the cotton and woollen manufactories ; and in this indirect way, one branch of domestic industry is materially benefited by another.

" And we cannot but observe in this place, that the temperance now practised on board most of these whale ships contributes, in no small degree, to the success of these long and hazardous voyages. We are happy to be able to state, that, in April, 1834, no less than 168 of the whale ships of New Bedford, were what are called temperance ships, furnishing no spirituous liquors, except for the medicine chest.

" Great Britain formerly gave a high bounty on vessels employed in the whale fishery ;

but this bounty ceased in 1824. A duty, however, on foreign oil, was continued, amounting, in the case of spermaceti oil, to a prohibition.

"The South Sea fishery was not prosecuted by the British, until about the commencement of the American revolutionary war. The greatest number of ships engaged in it, in any one year, from 1814 to 1824, when the bounty ceased, was sixty-eight, tonnage 19,755, and employing 1827 men; and, in 1830, only thirty-one ships, with a tonnage of 10,997, and 937 men; and these ships were from the port of London."

OUTFITS OF WHALE SHIPS.

"The outfits required for a whaling ship constitute no inconsiderable item of the expense, amounting, in a vessel which is fitted out for a three years' voyage, to no less a sum than 18,000 dollars, while the hull not unfrequently costs 22,000 dollars more, while many have sailed whose total cost does not vary far from 60,000 dollars. The principal kind of provisions required for the crew upon their voyage, consists of beef and pork, bread, molasses, peas, beans, corn, potatoes, dried apples, coffee, tea, chocolate, butter, besides from 3000 to 4000 casks, made from white oak, and a quantity of spare duck cordage, and other articles which may be required in the course of the voyage. In a ship which mans four boats, from thirty to thirty-two men are employed. The contract entered into between the crew and the owners of the ship, and contained in the shipping articles that are required to be signed by each sailor, makes it binding on the owners to provide the ship and all the necessary outlays of the voyage; and upon the crew to perform their duty on board the ship, obeying all proper orders to the end of the voyage. As a compensation, they are entitled to such part of the oil, or whatever else may be obtained, as shall be agreed upon for their services; and if, in case of death or accident, any portion of the crew is unable to perform his part of the voyage, they or their legal representatives are empowered to draw, in their own right, whatever of compensation would have fallen to their share had the voyage been completed, this compensation being proportioned to the time they shall have served. The 'lays,' or shares of the captain, officers, and crew, are measured by the amount of their experience and value in the voyage."

The annexed enumeration of the quantities of many articles of foreign and domestic produce required in the outfit of whale ships, which sailed during 1841, is derived from the *Nantucket Enquirer*—good authority on all matters pertaining to this branch of commerce. The American whalers have increased from a few frail boats, hardly venturing from the shore, to a fleet of 650 sail of 190,000 tons burden, a monument reared upon the broad ocean, where the world may sail and read the chivalrous and enriching results of New England perseverance, energy, and industry. Other nations have not been negligent in encouraging this fishery; but in all cases with but little good effect. Notwithstanding bounties, loans, royal grants, and monopolies, have been showered upon the adventurous whalers of other nations, the fishery has died under these lavishments until America and New South Wales only import enough for their own consumption:—

This extensive branch of the trade of this country is placed in a shape, in the following table, that shows the import, export, and value of the export of the produce the hardy sons of the east obtain from the depths of the fathomless ocean.

THE following is a Statement of the Quantity (in barrels) of Sperm and Whale Oil Imported into the United States, from the 1st of January, 1834, to the 1st of August, 1843.

Y E A R S.	Sperm.	Whale.	Y E A R S.	Sperm.	Whale.
	barrels.	barrels.		barrels.	barrels.
1834.....			1839.....	142,330	220,783
1835.....			1840.....	157,791	207,908
1836.....	128,686	131,157	1841.....	159,304	207,348
1837.....	181,723	210,133	1842.....	165,637	161,041
1838.....	132,356	210,552	1843, to August 1.....	113,986	160,617

THE following is a Statement of the Quantities and Value of Sperm Oil, Whale, and other Fish Oils, and Whalebone, Exported from the United States, annually, from the 1st of October, 1836, to the 30th of September, 1842:—

Y E A R S.	S P E R M O I L.		WHALE AND FISH OILS.		WHALEBONE.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	barrels.	dollars.	barrels.	dollars.	lbs.	dollars.
1836.....	4,925	119,787	791,900	1,049,466	731,500	187,098
1837.....	5,619	151,875	115,047	1,271,545	1,129,560	223,682
1838.....	5,295	137,809	153,154	1,556,775	1,634,570	321,458
1839.....	2,731	85,015	47,076	515,484	1,445,098	285,790
1840.....	13,797	430,490	143,519	1,404,984	1,892,259	310,379
1841.....	11,091	343,300	130,124	1,260,060	1,271,363	259,148
1842.....	9,135	233,144	124,118	1,315,411	918,280	225,382

By the above tables, it will be seen that the imports have been so fluctuating that the business appears to be on the decline. Such is not, however, the fact. More ships are in commission this year than ever before; but the vessels afloat have not been as successful, comparatively, as in former years. The additional number engaged will swell the imports up, by the 1st of January, 1844, to an amount larger than any previous year.

The whole number of vessels employed in the whale fisheries, out of the ports of the United States, is 645, belonging as follows. In 1843:—

PORTS.	Ves- sels.	PORTS.	Ves- sels.	PORTS.	Ves- sels.	PORTS.	Ves- sels.
	No.		No.		No.		No.
New Bedford	217	Wareham	7	Fall River	7	Bridgeport	3
Fairhaven	45	Provincetown	16	Freetown	1	Sag Harbour	44
Falmouth	6	Plymouth	7	Portsmouth	1	Cold Spring	3
Edgartown	10	Newburyport	1	Providence	8	Greenport	7
Holmes' Hole	3	Boston	4	Bristol	8	Hudson	2
Nantucket	85	Lynn	2	Warren	20	Poughkeepsie	2
Dartmouth	1	Salem	8	Newport	12	New York	2
Westport	11	Somerset	2	Stonington	20	Wilmington (Del) ..	3
Sippican	7	Ducksbury	1	Mystic	8		
Mattapovett	10	New Suffolk	1	New London	50		

Of the 645 vessels employed, only 112 were in port on the 22nd instant, leaving 533 vessels afloat, actively engaged in obtaining cargoes. Many of these vessels are daily looked for, and the reports of those absent exhibit a very favourable condition of the trade.

Sperm oil does not bring in this market so high prices as it used to in previous years; but whale oil and whalebone are at present in active demand, at as fair prices as we have quoted for some years past.

The prices of sperm and whale oil, and whalebone, from 1838, to 1842, inclusive, were as follows:—

YEARS.	Sperm Oil.		Whale Oil.		Whalebone.			
	cts.	cts.	cts.	cts.				
1839.....	75	to 97 av. 83	30	to 37 av. 32	17	to 21	av. 19½	
1839.....	98	" 110 " 103	30	" 39 " 34½	17	" 19	" 18½	
1840.....	90	" 106 " 100	30	" 32 " 30½	18	" 22	" 19	
1841.....	81	" 105 " 94	30	" 36 " 31½	18	" 23	" 19½	
1842.....	64	" 92 " 73	32	" 38 " 33½	20	" 32	" 23	
1843.....	53	" 78 " 63	31	" 40 " 34½	26	" 50	"	

Average prices for the six years above, are—

Sperm oil.....	cents.
Whale oil.....	86
Whalebone.....	32 5-6
	.. 22½

The *New Bedford Shipping List* gives the following estimate of Ships and Oil to arrive in 1844:—

	Sperm.	Whale.
	barrels.	barrels.
There are seventy-two sperm whale ships which may arrive in 1844 (that will be thirty-six to sixty months out), with 15,000 barrels sperm, and 120 barrels whale each	108,000	10,800
Three sperm whale ships that may arrive in 1844 (that shipped a part or the whole of their sperm oil home in 1843), with 500 barrels sperm and 500 barrels whale each ..	1,500	1,500
One hundred and six two-season right whalers that may arrive in 1844, with 1950 barrels whale and 250 barrels sperm each	26,500	206,700
Ten one-season right whalers may arrive in 1844, with 100 barrels sperm and 1400 barrels whale each	1,000	14,000
Forty Atlantic sperm whalers that may arrive in 1844, with 275 barrels sperm and twenty-five barrels whale each	11,000	1,000
Estimated quantity to be sent home from outward-bound whalers, &c.	3,500	
	148,500	234,000
Deduct for oil to be sold in South America	8,000
Total	148,500	226,000

American System of Whale Fishing.—When sailors' wages are high at New York or Boston, they are difficult to be procured; for the whalefishers are paid by *lays* instead of wages. These *lays* are of course dependant upon various circumstances; but, generally, the captain's lay is one-seventeenth part of all which is obtained; the first officer's, one-twenty-eighth part; the second officer's, one-forty-fifth; the third officer's, one-sixtieth; the boat-steerer draws from an eightieth to a hundred-and-twentieth; and the common sailor before the mast, from a hundred-and-twentieth to a hundred-and-fiftieth, according to his experience, activity, and strength. On the outward passage, the crew are divided into two watches, similar to those which exist in the merchant service.

The American whaling ships generally pass to the Pacific, by the way of Cape Horn; some sail by the eastern route, south of New Holland; others pursue the whales in the Indian Ocean, the vicinity of Madagascar, and the Red Sea, reach the Pacific through the straits of Timor, between New Guinea and the Pelew Islands, and sail to the coast of Japan. Every part of the Pacific is explored by the hardy and bold American whalefishers, and many new discoveries have been made by them.

The right whale is of the largest class. These were taken by the Americans as far back as in 1761, in the Gulf of St. Lawrence; they are said to have produced 230 barrels of oil; and as the vessels then employed did not exceed sixty tons' burden, a single whale made a full cargo. The bone from a whale of this size, sometimes weighed 3000 lbs., each of which was worth a dollar, and the slabs were frequently ten feet in length. Their food consists of a species of animal not larger than a spider, and similar in form, called "bret," which swim near the surface of the water, and tinge it for acres with a reddish cast. The difference between the right whale and the sperm is known at a distance by the manner of spouting. The right whale has two spout holes, and throws the water in two perpendicular streams, that widen as they rise. The "hump-back" and the "fin-back" spout in the same manner. The sperm-whale spouts in a single stream, thrown forward from its head, at an angle of about forty-five degrees.

A sperm whale, about sixty feet long, is usually about twenty-four feet in circumference; the distance from one point of the tail to the other is about seven feet. The length of the fin is about three feet and a half; about fourteen feet being the length of the jaw-bone. The spout-holes, or nostrils, are situated about ten inches from the end of the nose; from which to the eyes, the distance is not above fourteen feet. The skin is about the thickness of one inch; the blubber, on the ribs, about five inches, and upon the breast nine inches; the blubber being about one-sixth part of the whole of the animal. Whales of eighty feet long, have the blubber thicker in proportion.

The head of the sperm whale is in size equal to one-third part of the size of the body, has a blunt appearance, with a front like the breakwater of a ship, and at its junction with the neck, there is a large hump or bunch. From what might be named the shoulder, is the thickest part of the body, about one-third of its length, until what is called the "small," or beginning of the tail, where there is another hump seen, and from which a smaller ridge runs down towards the extremity, to the "flukes" or fins of the tail. The "flukes" consist of two triangular, horizontal fins, about six feet long, and twelve or fourteen feet broad, in those of the largest size. The great power of the muscles of these flukes, renders them a formidable means of defence, and an object of terror to the whaleman. In the upper part of the head there is a large triangular cavity, which is called the "case," containing the oily fluid that after death is congealed into that yellow, granulated mass, which we name spermaceti. Beneath this *case* and the nostril, there is a thick mass of substance, elastic in its nature, which is called the "junk," and formed of a *cellular tissue*, and infiltrated with *fine sperm oil* and *spermaceti*. The mouth extends throughout the whole length of the head, containing in the lower jaw forty-two teeth of formidable dimensions, and when open, it is as capacious as a middle-sized room, and the roof is covered with a kind of coarse hair, through which it strains the food. The throat, unlike that of the Greenland whale, is large enough to admit the body of a full-grown man. The eyes are small, situated far back on each side of the head. They have eyelids, the lower ones are moveable. A short distance behind the head are the swimming fins, which appear to serve them not only for the purpose of swimming but to hold their young. The size of a full-grown sperm whale is estimated to be about eighty-four feet in length; the depth

of the head from eight to nine feet, and the breadth five to six feet; the swimming fins about six feet long and three broad; and the circumference of the body thirty-six feet. The skin of the sperm whale is smooth and without scales. The colour of the skin is dark over the greater part of its surface, but especially so on the upper part of the head, the back, and near the flukes, where it is quite black; on the sides it is of a lighter shade, and on the breast silvery gray. Aged "bulls," as they are termed by whalers, frequently have a portion of gray on the nose, above the fore part of the upper jaw, and these are then said by whalers to be "gray-headed." The blubber encircles the body, and is termed by the sailors "the blanket." It is of a light yellow colour, and when melted down, becomes the sperm oil. The ordinary food of this species of whale appears to be a sort of sepia, or cuttle-fish, called the squid.

The ordinary motion of the whale is slow, swimming, as they do, at the rate of from two to four miles an hour; but they can go through the water at from ten to twelve miles an hour.

"The sperm whales herd in large schools, the females being protected by from one to three of the other species. The males appear jealous of intrusion, and fight with great power to prevent it. The large whales generally go alone in search of food, and when seen in company, are supposed to be travelling from one 'feeding ground' to the other. These large whales being quite incautious, are easily overcome, and, even after the plunge of the harpoon, often lay exposed to their destroyers like a log of wood, scarcely appearing to feel the blow. Sometimes, however, they are found possessing extraordinary courage, doing dreadful havoc with their principal weapons, their jaws and tails. They breed at all seasons, producing one, and sometimes two, at a birth, the size of their cubs being, when first born, from twelve to fourteen feet. The females are much smaller than the other sex, being not more than one-fifth part as great. These manifest strong attachment to their young, taking them under their fins, and urging them to escape from danger. Their attachment to each other is no less remarkable, and, when one is wounded, its companions will remain around her to the last, so that they often fall a sacrifice to their affection. The attachment, on the part of the young, towards its parent is no less extraordinary, and they are often seen around the ship for hours after their parents have fallen a prey to the harpoon. The young males swim in schools until they are about three-fourths grown, when they separate, and seek their prey upon the ocean alone. The difference between them and the female droves is evident and striking, from the fact that when one of their number is struck, it is left to its fate, scarcely an instance being known of its companions having 'heaved to.' They are cunning and shy, and, accordingly, are more difficult to take, as, from their vigour and activity, great despatch is necessary, in order to give them no opportunity to recover from the terror and fright occasioned by the blow of the harpoon. One singular circumstance may here be mentioned, that the whale, both great and small, appears to have the power of communicating intelligence to its kind, when any danger approaches, for the distance of four, five, or even seven miles; but the mode in which this is done has never been ascertained.

"The 'fin-back' whale is an animal of larger size than the sperm, but so uncertain and active in its motions as to elude the most expert whale fishermen.

"The 'right whale,' another species, which, with the sperm whale, constitutes the most prominent staple of our whale fishery, we have considered. It is similar in its general form to the sperm, and possesses the same general habits, although the oil extracted from it is of inferior quality. There are also other species, such as the razor-back, the broad-nosed whale, and the beaked whale; and species of a smaller kind, to which we shall merely allude.

"The wide domain of the ocean is the home of the whale, and we find it spouting in every latitude of the sea, from the icebergs of Greenland to the African coast. It is admitted, however, that the sperm whale is seldom seen in the colder latitudes, confining itself to the more genial climates; while the Greenland whale, which is of extraordinary size, appears to delight in tumbling among the mountains of ice which float in the region of the north pole. We find the whale fishermen hurling the harpoon upon the coast of New Zealand, as well as New Holland, near the shores of Peru and Madagascar, Chili and California, Japan and the China sea, the Red Sea and the Persian Gulf. It is, indeed,

not unusual for the whaling ships from our American ports to ransack the world for their gigantic prey, entirely circumnavigating the globe, although the enterprises of the British whale fishermen are directed more particularly to the coast of colder climates."—*Hunt's Magazine*.

The American whale ships are generally from 300 to 500 tons burden, and carry from twenty-eight to forty men, besides officers. They are provisioned with all necessary stores for three years. Sometimes the ships are accompanied by what are called "tenders," or smaller vessels, which serve as convoy to the principal ships, and that either aid them in distress, or themselves procure the whale. Each ship is provided with four or six whale boats, about twenty-seven feet long, and four broad, in which the whale is generally captured. These boats are strong and light, sharp at both ends, in order to withstand the action of the waves, to float with great buoyancy upon the tops of the billows when the sea runs high, and to be propelled both ways. Near the end, which may be considered the stern of the boat, a rounded piece of wood is placed, called the "loggerhead," through the hole of which the rope is run which is attached to the harpoon. Each boat has two lines, of about 200 fathoms in length, and carefully coiled in their tubs in a circle, four harpoons, and some lances. They are also provided with small flags, called "whifts," which are stuck in the dead whale, in case the whalemén are driven off from their object by untoward circumstances, and in order that their position may again be found. A few "drougues," or quadrangular pieces of board, are likewise provided, and fastened occasionally to the harpoon-rope, so as to impede the motion of the whale after he has been struck. Besides some articles of refreshment, each boat has also a keg, containing a tinder-box, lanterns, and other articles, to enable the fishers, when benighted, to strike a light. The boats are each manned by six men, two of whom are called the "headsman" and "boat-steerer." In chasing the whale, four of these boats are used.

The principal instruments used in the whale fishery are the harpoon, the lance, the spade, and the try-pot. The harpoon is an iron spear, about three feet in length, with a barbed point, and is required to be of the best iron; while the "shank," which is frequently bent by the struggles of the whale, must be of pliable and soft iron, for the purpose of enabling it to bend, if required, but not to break. The lance is also an iron spear of about six feet in length, and into which is fitted a handle of wood; its point is sharp and thin, the blade being seven or eight inches in length, and two and a half broad. This is used to wound the whale in a vital part after it has been struck, so as to cause its death. The spade, another instrument similar to the lance, is used to cut up the blubber into small pieces; and the *try-pot*, a large iron tank with three legs and two flattened sides, is used for boiling the blubber into oil.

The harpoon gun, invented in 1731, was formerly used for the purpose of throwing the harpoon into the body of the whale, which could be done with effect at the distance of forty yards; but, as great skill is required in its management, and numerous accidents have occurred from its use, the instrument has been relinquished.

The seamen, or whale fishers, are among the most ardent, daring, and, in many instances, the most reckless class of the American coast population, "comprised," as observed in an article in *Hunt's Magazine*, "of young men who are unwilling to devote themselves to those slow and persevering habits, that minute and scrupulous attention to detail required in the successful prosecution of any form of business, and that plodding and unvaried labour which is always exacted by the cultivation of the soil; they are bold, warm in their imaginations, impulsive, generous, and, from their mode of life, cast about as they are by storms from sea to sea, wide in their range of view, and devoid of the stability which would induce them to be confined long to any one place. Their habits of adventure in attacking the monsters of the deep upon their native element, give to their character a hardihood which could scarcely be acquired by any form of occupation upon the land. The day-book and the ledger, those mighty engines which form important parts of the machinery of commerce, have no charms for them. In the words of one of our most distinguished jurists, 'upon their native element, they are habitually buffeted by winds and waves, and wrestling with tempests; and, in time of war, they are exposed to the still fiercer elements of the human passions.'

"Accustomed to strict subordination by the discipline which the law has provided for

our whaling ships, to toil and deprivation when on duty, their hardships are mingled with glimpses of sunshine in its intervals. The natural ardour of their character appears to break out, when they are relieved from its burdens, and have their foothold once again upon the land. Their views become as expansive as the broad ocean which stretches around them, and their impulses as wild as the waves which dash against its shores. Conscious that they are all embarked in one common enterprise, hazardous in the extreme, in which the success of the voyage is the measure of their rewards, and mutually depending upon each other for success, their affections become kindled into sympathy for their companions; and this feeling operates always upon the land, so as to induce them to sacrifice their own comfort to that of their friends. The money which they have procured by the most severe toil, they are ever ready to spend liberally in every form of indulgence, by dissipation; and their loose habits of economy and want of calculation, frequently cause them to fall a prey to those greedy 'land sharks,' which always show their fins in great numbers through all our seaport towns.

"With such habits, to which there are many and honourable exceptions, it could hardly be expected that the great body of sailors should accumulate large fortunes. The earning of years of toil are expended in as many months at the bar or the brothel; and the sailor, stripped of his means, has only the last resort, to ship again and resume his march upon the mountain wave, and return to his home upon the deep. Dressed in red woollen shirts, coarse pantaloons, pumps, and tarpaulin hat—removed, as they are, from the restraints of the civil law, and without those habits of reflection which would arise from the more steady and sober pursuits of the land, they frequently exhibit riotous habits, which would lead one to think that they were exempted from the jurisdiction of the laws.

"The most prominent exceptions to this class of men, are those who have arisen by successive steps from the station of common sailors to that of boat-steerers, and to the posts of captains of their ships. These are, for the most part, temperate in their habits, with physical and moral powers fully adequate to bear the great responsibilities which devolve upon them, and to stand at the head of these stormy expeditions. We see many along our coast who have acquired fortunes by their business, and the beautiful houses which whiten our shores attest the success of their labours. A few remarks may be proper in this place, respecting the discipline of the whaling ships, which is permitted by our laws. In the first place, it is well known that the ships which ply from our ports are chiefly owned by different individuals, who combine their capital in this species of stock usually to a large amount of value. Not only is the custody of the ship, which is of great cost, but also that of the outfits and crew, and the prosecution of the voyage, intrusted to the keeping of a single man, the captain of the ship. Numerous sailors, of diverse and frequently insubordinate habits, are placed under his control, and on their obedience depend not only the success of the expedition, but even the safety of their lives. The law gives to the master of the ship a despotic power within certain prescribed bounds. It invests him with entire and full command of his ship, with the right to inflict personal chastisement upon those who break its discipline, to control the operations of the crew, and generally to exercise the same government that a schoolmaster exerts over his scholar, or the parent over his child. Doubtless many acts are committed on the part of the master which are founded in injustice, but then the sailor has his remedy by bringing his action for civil damages in a court of law. It has, indeed, been our lot, during a limited professional practice in a seaport town, to have frequent applications from sailors claiming maltreatment on board ship from their captains, which, however, proved to furnish no ground for a legal claim of damages. Certain old 'law salts' are always found on board ship ready to give in their advice when a sailor has been unjustly punished, or chastised with improper weapons; and a jury away from the coast, it is well known, are seldom backward in awarding damages full as great as the injury. Doubtless, extraordinary discretion, forbearance, and determination, are required on the part of the master, to exercise the power which the law gives him for the purpose of preserving discipline on board his ship, and thus carrying out the objects of the voyage; but how many acts of insubordination on the part of sailors may manifest themselves in unequivocal signs, and which demand punishment from the consequences which they produce, although the facts cannot be established in evidence. Is the power of personal chastisement that the law

allows the master to inflict upon insubordinate sailors, and which is so repugnant to the feelings of many of our citizens, expedient and right? We maintain that it is! because it is clear that such or like means are essential to the safety of the voyage, and without them no whaling voyages could be safely prosecuted. Suppose recreant offenders could only be placed in irons until the ship arrived in port, or within the jurisdiction of a competent court to try the case? Under these circumstances their services would be lost; and were a sufficient number to merit this punishment, it would be in their power at any time to break up a voyage, by placing themselves in this position.—Personal chastisement of sailors, we say then, is just, from the necessity of the case. It should never, however, be inflicted but on sure grounds, and with proper weapons. Should the master of the ship fail to comply with the requisitions of the law in this respect, he is, and ought to be, amenable to the injured party in damages, as is fully proved by the records of our courts. His position, with a crew possessing the physical power to wrest from him his command, at all times subject to revolt, and far away from succour, on the desert of the ocean, is unenviable. If his responsibilities are great, so also should be his rewards, if he meets these responsibilities with promptitude, and performs his duty.”—*Hunt's Magazine*.

On the departure of a whale ship from an American port, the provisions and other stores are stowed away, and arranged in the order to be required for future use. The crew have packed in their chests their best apparel, and all they do not immediately require, and they appear in their red shirts and new tarpaulins. The instruments which have been prepared are carefully stowed away in their cases, and the whaleboats are swung in regular order, above the deck or on the ship's side; the crew are mustered on board, and the ship departs for a long and uncertain voyage.

The following accounts of an actual disaster and voyage, extracted from a recent number of the *New York Merchant's Magazine*, will best elucidate the dangers attendant upon the whale fishery.

“The ship *Essex*, Captain George Pollard, sailed from Nantucket, 12th of 8th month, 1819, on a whaling voyage to the Pacific Ocean. Her crew consisted of twenty-one men, fourteen of whom were whites, mostly belonging to Nantucket; the remainder were blacks. On the 20th of the 11th month, 1820, in latitude 0 deg. 40 min. south, longitude 119 deg. west, a school of whales was discovered, and, in pursuing them, the mate's boat was stove, which obliged him to return to the ship, when they commenced repairing the damage. The captain and second mate were left with their boats, pursuing the whales. During this interval the mate discovered a large spermaceti whale near the ship; but not suspecting the approach of any danger, it gave them no alarm until they saw the whale coming with full speed towards them. In a moment, they were astonished by a tremendous crash. The whale had struck the ship a little forward of the fore chains. It was some minutes before the crew could recover from their astonishment, so far as to examine whether any damage had been sustained. They then tried their pumps, and found that the ship was sinking. A signal was immediately set for the boats. The whale now appeared again making for the ship; and, coming with great velocity, with the water foaming around him, he struck the ship a second blow, which nearly stove in her bows. There was now no hope of saving the ship, and the only course to be pursued was, to prepare to leave her with all possible haste. They collected a few things, hove them into the boat, and shoved off. The ship immediately fell upon one side, and sunk to the water's edge. When the captain's and second mate's boats arrived, such was the consternation, that for some time not a word was spoken. The danger of their situation at length aroused them, as from a terrific dream to a no less terrific reality. They remained by the wreck two or three days, in which time they cut away the masts, which caused her to right a little. Holes were then cut in the deck, by which means they obtained about 600 pounds of bread, and as much water as they could take, besides other articles likely to be of use to them. On the 22nd of the 11th month, they left the ship, with as gloomy a prospect before them as can well be imagined. The nearest land was about 1000 miles to the windward of them; they were in open boats, weak and leaky, with a very small pittance of bread and water for the support of so many men, during the time they must necessarily be at sea. Sails had been prepared for the boats, before leaving the ship, which proved of material benefit. They steered southerly

by the wind, hoping to fall in with some ship, but in this they were disappointed. After being in their boats twenty-eight days, experiencing many sufferings by gales of wind, want of water, and scanty provisions, they arrived at Ducie's Island, in latitude 24 deg. 40 min. south, longitude 124 deg. 40 min. west, where they were disappointed in not finding a sufficiency of any kind of food for so large a company to subsist on. Their boats being very weak and leaky, they were hauled on shore and repaired. They found a gentle spring of fresh water, flowing out of a rock at about half ebb of the tide, from which they filled their kegs. Three of the men chose to stay on the island, and take their chance for some vessel to take them off."

The following is another account from the same authority.

"In the afternoon of a day which had been rather stormy, while we were fishing in the North Pacific, 'a school' of young bull whales made their appearance close to the ship, and as the weather had cleared up a little, the captain immediately ordered the mate to lower his boat, while he did the same with his own, in order to go in pursuit of them.

"The two boats were instantly lowered, for we were unable to send more, having two others 'stove' the day before; they soon got near the whales, but were unfortunately seen by them before they could get near enough to dart the harpoon with any chance of success, and the consequence was, that the 'pod' of whales separated, and went off with great swiftness in different directions. One, however, after making several turns, came, at length, right towards the captain's boat, which he observing, waited in silence for his approach without moving an oar, so that the 'young bull' came close to his boat, and received the blow of the harpoon some distance behind his 'hump,' which I saw enter his flesh myself, as it occurred close to the ship. The whale appeared quite terror-struck for a few seconds, and then suddenly recovering itself, darted off like the wind, and spun the boat so quickly round, when the tug came upon the line, that she was within a miracle of being upset. But away they went, 'dead to windward,' at the rate of twelve or fifteen miles an hour, right against a 'head sea,' which flew against and over the bows of the boat with uncommon force, so that she, at times, appeared ploughing through it, making a high bank of surf on each side. The second mate, having observed the course of the whale and boat, managed to waylay them, and when they came near to him, which they speedily did, a 'short warp' was thrown, and both boats were soon towed at nearly the same rate as the captain's boat had been before.

"I now saw the captain darting the lance at the whale as it almost flew along, but he did not seem to do so with any kind of effect, as the speed of the whale did not appear in the least diminished, and in a very short time they all disappeared together, being at too great a distance to be seen with the naked eye from the deck. I now ran aloft, and, with the aid of a telescope, could just discern from the mast-head the three objects, like specks upon the surface of the ocean, at an alarming distance. I could just observe the two boats, with the whale's head occasionally darting out before them, with a good deal of 'white water' or foam about them, which convinced me that the whale was still running. I watched them with the glass until I could no longer trace them, even in the most indistinct manner, and I then called to those on deck, that they might take the bearing, by compass, of the direction in which I had lost sight of them, that we might continue to 'beat' the ship up to that quarter.

"Although all eyes were employed, in every direction, searching for the boats, no vestige of them could be seen; and, therefore, when half-past nine, P. M., came, we made up our minds that they were all lost; and, as the wind howled hoarsely through the rigging, and the waves beat savagely against our ship, some of us imagined that they could occasionally hear the captain's voice, ordering the ship to 'bear up,' while the boats had been seen more than fifty times by anxious spirits, who had strained their eyes through the gloom until fancy robbed them of their true speculation, and left her phantasmagoria in exchange. We all looked in that direction, and in a few minutes we could plainly perceive it; in a short time we were close up with it, when, to our great joy, we found the captain and all the men in the boats, lying to leeward of the dead whale, which had, in some measure, saved them from the violence of the sea. They had only just been able to procure a light, having unfortunately upset all their tinder through the violent motion of the boats, by which it became wet, but which they succeeded in igniting after immense application of the flint

and steel; or their lantern would have been suspended from an oar directly after sunset, which is the usual practice when boats are placed under such circumstances."

"On the morning of the 18th of June, 1832, while we were still fishing in the 'off-shore ground' of Japan, we fell in with an immense sperm whale, which happened to be just the sort of one we required to complete our cargo. Three boats were immediately lowered to give him chase; but the whale, from some cause or other, appeared wild in its actions long before it had seen any of our boats, although it might have been chased the day before by some other ship. It was greatly different in its actions to most other large whales, because it never went steadily upon one course. If he 'peaked his flukes,' or went down going to the southward, we expected he would continue that course under water, but when he again rose, perhaps he was two or three miles away from the boats to the northward; in this sort of manner he dodged us about until near four, *r. m.*, at which time the men were dreadfully exhausted from their exertions in the chase, which had been conducted under a broiling sun, with the thermometer standing in the shade at 93 deg. About half-past four, however, the captain contrived, by the most subtle management and great physical exertions, to get near to the monster, when he immediately struck him with the harpoon with his own hands; and, before he had time to recover from the blow, he managed, with his usual dexterity, to give him two fatal wounds with the lance, which caused the blood to flow from the blow hole in abundance. The whale, after the last lance, immediately descended below the surface, and the captain felt certain that he was going to 'sound,' but in this he was much mistaken; for, a few minutes after his descent, he again rose to the surface with great velocity, and, striking the boat with the front part of his head, threw it high into the air, with the men and every thing contained therein, fracturing it to atoms, and scattering its crew widely about. While the men were endeavouring to save themselves from drowning, by clinging to their oars and pieces of the wreck of the boat, the enormous animal was seen swimming round and round them, appearing as if meditating an attack with his flukes, which, if he had thought proper to do, in return for the grievous wounds that he had himself received, a few strokes of his ponderous tail would soon have destroyed his enemies; but this was not attempted. They had now nothing to hope for but the arrival of the other boats to relieve them from their dangerous situation, rendered more so by the appearance of several large sharks, attracted by the blood which flowed from the whale, which were sometimes only a few feet from them; and also from the inability of one of the boat's crew to swim, by which three or four of his mates were much exhausted in their efforts to save him, which they succeeded in doing, after having lashed two or three oars across the stern of the boat, which happened to be not much fractured, on which they placed their helpless fellow-adventurer. After they had remained in the water about three-quarters of an hour, assisting themselves by clinging to pieces of the wreck, one of the other boats arrived and took them in. But although these brave whale fishermen had been so defeated, they were not subdued; the moment they entered the boat which took them from the ocean, their immediate determination was for another attack upon the immense creature, which remained close by, while the other boat, which was pulling towards them with all the strength of its rowers, would still be a quarter of an hour before it could arrive.

"The captain, with twelve men in one boat, therefore, made another attack upon the whale with the lance, which caused it to throw up blood from the blow hole in increased quantities. We, who were on board the ship, and had observed from a great distance, by means of the telescope, the whole of the occurrence, were employed in beating the ship towards them; but they were far to windward, and, the wind being rather light, we had even our royal sails set. Soon after the arrival of the third boat, the whale went into its slurry and soon died, when, to the dismay of the boats' crews, who had endured so much danger and hardship in its capture, it sunk, and never rose again—an occurrence which is not very unfrequent, owing, of course, to the greater specific gravity of the individual, perhaps from a greater development of bony and muscular structures. Such were the adventures of that day, in the evening of which the crews returned to the ship, worn out and dispirited, having lost a favourite boat, with the whole of her instruments, besides the last whale wanted to complete the cargo, and worth at least 500*l.*!"

When a whale is dead, the process of extracting the oil commences, by two opera-

tions, called "cutting in" and the "trying out." The whale is brought alongside of the ship, and the business of *cutting in*, by means of the spades, is effected. A man descends upon the floating carcase, and cutting a hole in the body of the whale, near its junction with the head, inserts a hook in the hole, by which that part is drawn up towards the ship by pulleys prepared for the purpose. This, particularly in a high sea, is a dangerous experiment, as the motion of the waves prevents certain footing upon the slippery body of the animal. A tension being produced upon the fat by this motion, it is cut by the spade in strips of two or three feet broad, and in a spiral direction, which is done by means of a windlass acting upon pulleys that are fixed to the maintop. The "blanket pieces," as they are termed, are removed by a similar process to that of a bandage unrolled from a circular body; and the animal is divested of its blubber to the flukes, the head being previously cut off and allowed to float, carefully secured, at the stern of the ship.

The carcase of the whale, after being flayed, is allowed to float off; the head is then hoisted on end by the pulleys, the *case* is opened, and the spermaceti is taken out, by means of a pole and bucket which is dipped into the cavity. The junk is then cut from the head. This is hoisted on board, and cut into square pieces, when the head is allowed to sink, being divested of the means of buoyancy. The blanket pieces, from eight to fourteen inches thick, are then cut from the long strips of fat, and, as well as the junk, are separated into thin pieces, upon blocks called horses, and thrown into the *try-pots* in which the blubber is melted. The membranous parts of the oil, which are called "scraps" by the sailors, are used as fuel; and the spermaceti from the *case* is boiled alone, and called "head matter." The oil and spermaceti are then placed in barrels, to be brought back into port.

The whalebone, which forms so important an article of commerce, is in the mouth of the whale, and forms a filter within peculiarly adapted to separate the sea-water from the sepia, or other fish, on which it feeds. The laminae, about 300 in number, are situated on each side of the head, and the longest blade is usually the test which designates the size of the whale. Its greatest length is fifteen feet; its greatest breadth, about twelve inches, and its greatest thickness, about five-tenths of an inch. The edge of each blade of the bone annexed to the tongue, is fringed with a sort of hair; and it is generally brought from Greenland in its natural state, although sometimes prepared for market on ship-board.

It is estimated by Scoresby, that four tuns of blubber produces generally about three tuns of oil, each tun comprising 252 gallons by wine measure. The colossal dimensions of this animal may be adjudged from the fact, that whales are sometimes caught which yield thirty tuns of pure oil, although these are, of course, not as common as those which produce twenty tuns. It has been found that the quantity of oil produced from a single whale, usually bears a uniform proportion to the length of the bone. The following table, prepared by one who has had much experience in the matter, gives the relative proportion which the size of the bone in a whale bears to the quantity of oil, and which is probably as accurate as any information which can be procured from the uncertain means of testing the fact.

Length of whalebone in feet.	1	2	3	4	5	6	7	8	9	10	11	12
Oil yielded in tuns.	1½	2½	2¾	3½	4	5	6½	8½	11	13½	17	21

It is estimated that a whale of sixty feet in length, does not fall short of the weight of seventy tons, the blubber comprising about thirty tons; the bones of the head, whalebone, fins, and tail, ten, and the carcase nearly thirty-two. The flesh of the young whale is of a red colour, and in consistency it is somewhat like coarse beef, while that of the old whale is exceedingly black, being constituted of firm beds of muscles, which appear to be directed to the movements of the tail, the flesh being thus rendered too coarse to be eaten. These bones, however, are extremely porous, and contain much fine oil.

"The appearance of most whalemén," observes a writer in *Hunt's Magazine*, "when they return from a voyage, is hardy and robust in the extreme; the substantial food and

bracing air, afforded by the circumstances in which they are placed, as well as their violent exercise, serving to give remarkable vigour and animation to their constitutions. The class of men acting in the capacity of masters, and to whom we have before adverted, cannot be regarded with too great respect. As a body, they are men who have combined in their character the most valuable traits; cool, determined, and brave, they bear the weight of duties, and encounter hazards, which could hardly be appreciated upon the land. A striking difference exists, however, in the success of different masters of ships. Some appear always endowed with good luck, and make prosperous voyages, while others are as uniformly unfortunate in their expeditions. Doubtless, the different success of these captains may be attributable to a diversity in skill, energy, knowledge, and prudence; yet it is as often owing to circumstances which are known only to the Omniscient. We have in our eye one of these men, who, although yet comparatively young, is distinguished for his energy and his uniform success in these whaling expeditions. Spare in his form, there is a restlessness in his eye and frame, which seems to indicate that his soul is absorbed in his pursuit, and conquered by his ambition to succeed. Whenever he is enlisted as a master of a ship, that ship is sure to make a good voyage. He has worked his way, by degrees, to the station of principal owner in a large ship, starting as he did, a common sailor, and by his own efforts has already earned a considerable fortune. His course presents an exception to the general custom of whale fishermen, in the fact that he usually takes his wife with him to sea, and we have seen his little dark-eyed boy, with a complexion embrowned by a tropical sun, clothed in a complete suit of seal-skins, which he had procured with his father on one of his already many voyages round the world, in the prosecution of the whale-fishery. This man has been a source of vast profit to his employers, and while we are writing, is probably hurling the harpoon into a whale upon waves so high, and beneath clouds so dark, that other mariners would deem it prudent to lay to for preservation from the winds. He is, however, only one of that numerous class of the whale-fishermen of New England, who have from the time of Burke, within the last half century, earned a reputation which is as wide as the commercial intelligence of the world.

"Nor do these hardy fishermen, although tossed for months upon the watery waste of the ocean, forget the friends whom they have left upon the land. The numerous rows of beautifully enamelled and polished shells of various forms, which line the cabinets of our seaport towns; the ostrich eggs, which the sailors often collect upon the shores of Africa, and bring home as curiosities made into bottles, and brought into port as presents; the canes, cut from the jaw-bone of the whale, of the colour of ivory, and carved with curious devices, evince the ingenuity with which they occupy their leisure time. Nor are the fine arts neglected by these sons of the ocean; for we see the walls of the houses of our whalers frequently adorned, not disfigured, by well-executed paintings of the whale, in different postures, from the first blow of the harpoon to his last spouting of blood.

"Of late years, as we have seen, the states bordering the Atlantic, including the principal seaport towns of Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut, and even the more inland states of New Jersey and Delaware, have embarked, to a considerable extent, in the whale fishery; and the luxurious edifices which adorn many of these cities, attest the enterprise of those who are engaged in the traffic, and the success of their labours."—*Merchants' Magazine*, various Sources.

The character of the inhabitants of Nantucket and the seaports from Cape Cod to New London, who follow the whale fishery, is grave, sober, and persevering; and they retain much of the deportment which characterised their ancestors, who were either quakers or puritans. Their ships in this employment, or their whale fleet, are each from 200 tons to 600 tons. With these vessels they navigate the greatest oceans, and most stormy regions. Their voyages average about two years and a half, but they are fitted out for three years; and care is taken to have every article that may be considered necessary to promote the comfort, and preserve the health of the crews.

The preparation for whaling voyages, and the departures of the ships, are attended with the most interesting circumstances. The mothers, wives, sisters, or daughters, of these hardy and adventurous men, are, long before the day of sailing, busily engaged in collecting every delicacy for the voyage, and providing and packing up all sorts of clothing suitable for the stormy and cold rigours of the Antarctic regions, as well as for the mild climate and gentle seas of the Pacific. On parting with them for a period of nearly, or more than three years, the old, middle-aged, and young, of both sexes, manifest in the most tender and affectionate manner, all the endearing feelings of the heart.

Some of these ships proceed round Cape Horn, others round the Cape of Good Hope, and they frequently meet in the Pacific. The Indian, Chinese, and Pacific Oceans, are better known to these men than to any other navigators; and to this circumstance, and their great caution in keeping two men always stationed at the mast head, on the look out for land or breakers, must be attributed the very few shipwrecks among them—for they certainly navigate the most boisterous regions, and the most imperfectly known seas, especially on the charts, in the world. The dangers to which they are exposed are great in the extreme, and innumerable are the hazards they encounter.

The whales most valued are considered as becoming scarcer, and ships are going farther south than before; and those engaged in the South Sea seal fishery proceed still farther than the whalers towards the South Pole. The ships seldom remain more than three months at a time over each whaling ground.

During these long voyages, the young men receive instructions, from those older, in mathematics, navigation, geography, the natural history of the South Seas, and in practical knowledge connected with their hazardous profession. They occasionally land and refresh themselves in some of the beautiful islands of the Pacific, and return on shipboard invigorated and recruited, to follow their proper pursuits.

LAW RELATIVE TO AMERICAN VESSELS ENGAGED IN THE WHALE FISHERY.

The following law, to cancel the bonds given to receive duties upon vessels and their cargoes, employed in the whale fishery, and to make registers lawful papers for such vessels, was passed by the present Congress of the United States, and approved by the President, April 4th, 1840 :—

1. That all vessels which have cleared, or hereafter may clear, with registers, for the purpose of engaging in the whale fishery, shall be deemed to have lawful and sufficient papers for such voyage, securing the privileges and rights of registered vessels, and the privileges and exemptions of vessels enrolled and licensed for like voyages, shall have the same privileges and measure of protection as if they had sailed with registers, if such voyages are completed, or until they are completed.

2. That all the provisions of the first section of the act, entitled "An act supplementary to the act concerning consuls and vice-consuls, and for the further protection of American seamen," passed on the 28th day of February, Anno Domini eighteen hundred and three, shall hereafter apply and be in full force as to vessels enrolled and licensed for the fisheries, and all vessels which have been engaged in the whale fishery, in the same manner and to the same extent as the same is now in force and applies to vessels bound on a foreign voyage.

3. That all forfeitures, fees, duties, and charges of every description, required of the crew of such vessels, or assessed upon the vessels or cargoes, being the produce of such fishery, because of a supposed insufficiency of a register to exempt them from such claims, are hereby remitted; and all bonds given for such cause are hereby cancelled, and the secretary of the treasury is hereby required to refund all such monies as have been, or which may be paid into the treasury, to the rightful claimant, out of the revenues in his hands.

CHAPTER XI.

BRITISH WHALE FISHERY.

THE British whale fishery, formerly so very extensive, has, from causes which have developed their effects during the last ten years, declined rapidly; and there is every probability that both the northern and southern British whale fishery will be discontinued from the ports of the United Kingdom. The substitution of vegetable and lard oils, and stearine from lard—the great outlay of capital in the southern whale fishery, the long period which must expire before any return can be realised for the expenditure, constitute the chief causes of the decline of the whale fishery from British ports. The Dutch whale fishery disappeared in the early part of the present century; the French whale fishery is only maintained by bounties taken from the national taxes, and we can scarcely hope that it can ever be revived so as to constitute a profitable pursuit from any port in Europe. If it should be carried on to any advantage by the Americans, we do not see why it should not be conducted with equal profit from the ports of Nova Scotia and New Brunswick. We doubt, however, whether this expensive and perilous fishery can be continued for many years, with profit, from any of the Atlantic states. The rapidly increasing use of much cheaper and equally efficient substitutes for sperm oil and spermaceti, as well as for common whale oil, must cause a corresponding decrease in the price of other oils for the same uses; and unless they can be supplied with some profit at those reduced prices, they will cease to be produced. New Zealand, New South Wales, and Australia, are all conveniently situated for the whale fishery; and it appears to us that if the whale fishery is to be hereafter carried on with success and profit, it must be from establishments for the purpose, in those colonies, and in the islands of the Pacific. One great impediment to the continuance of the southern whale fishery is the heavy outlay of capital: and private individuals will hesitate before they invest, probably, all they possess in one great risk. Whether a company could safely enter upon a project which would employ a great number of ships, improve our naval architecture, and under a judiciously regulated system, elevate the moral character of seamen, and extend the scientific acquirements, and the requisite qualification for commanders, or shipmasters, is a question to be solved only by those who have the most practical knowledge of the subject.

STATEMENT of the Southern Whale Fishery carried on from Great Britain since 1800; exhibiting the Total Number of Ships annually absent from Great Britain on Whaling Expeditions; the Total Number of Ships that annually returned to Great Britain; the Annual Imports of Sperm and Common Oil, with the Prices of each; the Average Tonnage of the Ships at Sea; and the Average Number of Men to each Ship.

The foregoing table shows a falling off in twenty years of 237 ships, and 9780 men, employed in the British fisheries, being equal to $\frac{1}{10}$, which is asserted to be attributable to the withdrawal of bounties from *British* fisheries, and the abatement of duties on vegetable oils, the produce of *Foreign* Countries, the increased importation of the latter being shown in the following table.

VEGETABLE Oils imported into the United Kingdom in the respective Years 1821, 1841, 1842, 1843, and 1844.

There are no accounts existing, that we know of, from which we can ascertain the bounties paid from 1789 to 1813 inclusive: as those in the customs were destroyed by fire. The bounties paid, according to M'Pherson, from 1750 to 1788 amounted to 1,577,935*l.* sterling; and Mr. M'Culloch estimates that more than 1,000,000*l.* has been paid after that period. So that more than 2,500,000*l.* sterling have been paid by the nation for bounties to the whale fishery.

The northern whale fishery, though for a long period, a severe and perilous nursery for hardy and daring seamen, appears to have been always a speculation and most uncertain pursuit. Its gradual decline, and the probability of its total extinction are shown in the following tables. All pursuits will cease to be followed when they become unprofitable,—when repeated losses are the result. We may lament over the extinction of fleets sailing annually on certain expeditions, which, from long continuance, we, very naturally, considered, as for all time to be allied to the past, the present, and the future maritime history of our country. The fleets of the East India Company,—a glorious and majestic naval force, have vanished. The trade with India has not diminished. Our merchant princes, send thither their individual fleets, which rival those of the Company. We would rejoice at the continuance and the extensive increase of the British South Sea whale fishery as a bold maritime enterprise. Can this be carried into effect for the general benefit of the nation? This is a question which we cannot undertake to answer.

Mr. Charles Enderby, who, and his predecessors, have been extensively engaged in the whale fishery, and to whom we have to acknowledge our obligation for many of the elements of the foregoing tables, states in the last communication which he has favoured us with, that the number of ships engaged in the northern and southern whale fisheries, during the years 1843 and 1844, were as follows, viz. :—

YEARS.	NORTHERN FISHERY.	YEARS.	SOUTHERN FISHERY.
	Ships.		Ships at Sea.
	number.		number.
1843.....	24	1843 Christmas.....	50
1844.....	32	1844.....	47
1845.....	34*	1845 30th of April.....	44

* The supposed number likely to be equipped.

He considers that fifteen ships will, probably, return to England from the southern fishery this year ; of this number, it is not probable that more than five will be refitted.

Twenty-one ships are engaged in the southern fisheries from the Australian colonies. Six ships from St. John's, New Brunswick ; and one ship from Halifax, Nova Scotia.

From the United States of America, 1st of April, 1845, 691 ships.

CHAPTER XII.

MANUFACTURES OF THE UNITED STATES.

INDUSTRY, exhibiting the unsubdued spirit of perseverance, while enduring the greatest privations in opposition to, and in overcoming all the difficulties peculiar to, an unknown wilderness and uncivilised aborigines, has, from the first settlement of the New England colonies, characterised the Anglo-Saxons; who fled to America, in order to enjoy civil liberty, and the freedom of worshipping the Creator, according to their conscientious belief, in the truth, purity, and simplicity of primitive Christianity.

The Anglo-Saxons who first emigrated were nearly all poor families. Their means of subsistence depended upon subduing the forest, cultivating the soil, killing wild animals and wild fowl, and upon catching the fish which frequented the shores and rivers. Horned cattle and other live stock were gradually introduced from Europe. But, while in England, persecution continued against those unfortunate persons, emigrants arrived in America faster, and the population increased faster than cattle. Afterwards the latter multiplied rapidly, and it is curious, that as the price of cattle fell from 25*l.* a head, as stated by the Honourable Edward Everett, in an address delivered before the American Institute at New York:—"The effect of which," he observed, "was distressing, but it put the sagacious colonists upon new resources. The account of this, contained in the early historian of the colony, is strongly characterised by the simplicity of elder times." After describing the check put to emigration, he goes on as follows:—"Now the country of New England was to seek of a way to provide themselves with clothing, which they could not obtain by selling cattle, as before; which now were fallen from that huge price forementioned, first to 14*l.* sterling and 10*l.* sterling a head, and presently after, at best within the year, to 5*l.* sterling a piece; nor was there at that rate, a ready vent for them neither. Thus the flood which brought in much wealth to many persons, the contrary ebb carried all away out of their reach. To help them in this their exigent, besides the industry that the present necessity put particular persons upon, for the necessary supply of themselves and their families, *the general court made order for the manufacture of woollen and linen cloth*, which, with God's blessing upon man's endeavour, in a little time stopped this gap in part, and soon after another door was opened by special Providence. For when one hand was shut by way of supply from England, another was opened, by way of traffic, first to the West Indies and Wine islands, whereby among other goods, much *cotton wool* was brought into the country from the Indies, which the inhabitants learning to spin, and breeding of sheep and sowing of hemp and flax, they soon found out a way to supply themselves of [cotton] linen, and woollen cloth."

This early account of the commencement of manufactures in the Anglo-American colonies was followed in nearly all the others, and there is scarcely a

farmer in the northern, central, and western states, and in the British North American colonies, in whose farm-houses the common articles of wearing apparel are not made, chiefly of linen, wool, and cotton.

The following extract from an article in the *Merchants' Magazine* is interestingly characteristic of the industrious energy of the early settlers, and their progress in America:—

“ The Anglo-American colonists were, for the most part, poor men, without high rank or title, who were obliged to hew out their own way. Some, it is well known, were induced to immigrate from religious motives, and others from motives of gain, but in all we see traits which are not to be mistaken—the iron firmness and downright vigour of the Anglo-Saxon. They came to a country in which a throne had never stood, without any invincible prejudices in favour of prescriptive principles and forms. They planted themselves in forests fresh in the magnificence of nature, and burdened with the resources of national wealth; and it was this very Anglo-Saxon spirit which enabled them to contend successfully, first with France, and then with England, in two long and bloody contests, and to come out victors, securing to themselves the possession of the soil. It was the spirit of the Anglo-Saxon which afterwards embodied itself in the constitution of the United States, through which they have quadrupled their effective power. It is this which has given increased momentum to the productive industry of the country, which places the great bulk of the people on a broad platform of equal rights, and has made them the source of law, in war soldiers, in peace submissive citizens, pressing motives upon their minds, the strongest which can actuate ambitious men—a fair and open field—to secure the greatest good. It burdens the people with no taxes for the support of an ecclesiastical establishment from whose faith they dissent. It gives no money of the treasury to the maintenance of a gigantic civil list, to the purchase of gems which are to blaze before titled rank only, and no part of the soil is granted out to pets as a reward for imaginary services. Throwing aside all those incumbrances which might obstruct free industry, it says, in effect, to the people, ‘ Come, draw your nutriment from the ample bosom of your mother earth, and develop the resources of your country, for your country is your commonwealth.’ ”

The commerce which was carried on, in America, for nearly a century, both by the French and English, was confined to the exchange of European articles for the furs of wild animals, and to the fisheries on the coast. The policy of Great Britain was afterwards perseveringly directed against the manufacturing industry of the colonists. As early as 1731, the jealousy which existed on this subject induced the House of Commons to report with respect to “ any laws made, manufactures set up, or trade carried on, in the colonies, detrimental to the trade, navigation, and manufactures of Great Britain ;” and, in consequence of an *alarming* discovery in respect to the manufacturing of hats, it was ordained that no hats or felts should be exported from the colonies, or “ loaded on a horse, cart, or other carriage, for transportation from one plantation to another.” In 1750, another law was passed, equally degrading. It prohibited the “ erection or continuance of any mill or other engine for slitting or rolling iron, or any plating forge to work with a tilt hammer, or any furnace for making steel, in the colonies, under penalty of 200*l*.”

In 1699, an act of the English Parliament declared, that “ no wool, woollen yarn, or woollen manufactures of their American plantations should be shipped there, or even laden, in order to be transported from thence to any place whatever.” In 1719, the House of Commons enacted, “ that erecting any manufactories in the colonies tended to lessen their dependence upon Great Britain.” Accounts were received by the mother country about the same time—

“ That the colonists were not only carrying on trade, but also setting up manufactures detrimental to Great Britain; and, in consequence of these reports, an order was issued by the House of Commons requiring the Board of Trade to report with respect to *laws made, manufactures set up, or trade carried on detrimental to the trade, navigation, or manufactures of Great Britain.*” The

report made by the Board of Trade in 1732, which although probably not accurate, contains the best account of the condition of American manufactures at that period. This report stated that a law had been passed in the colony of Massachusetts bay to encourage the manufacture of paper, which act tended to diminish the profits made by the British importer of that article; that in New England, New York, Connecticut, Rhode Island, and Pennsylvania, woollen and linen cloth were manufactured to some extent for domestic use, and that the product of those colonies being chiefly cattle and grain, with a quantity of sheep, the wool would be lost were it not used for that purpose. It was also reported, that flax and hemp were produced in the colonies to a considerable extent, which were manufactured into a coarse sort of cloth, as well as bags, traces, and halters for their horses, that were more serviceable than those that were imported from abroad; yet, from the high price of labour here, the manufacture of linen could not be carried on at less than twenty per cent, and that of woollens than at fifty per cent less than the costs of the English fabrics. The returns from the English governor of New Hampshire alleged that there were no manufactures in that province, excepting a little linen made by its emigrants from Ireland, but that the principal trade was in lumber and fish. Massachusetts, at that time, also manufactured a coarse cloth from their flax and wool, but the merchants could import the foreign fabrics at a cheaper rate than they could purchase those which were made at home. A few hat-makers worked at their trades in the towns of that state, but none of their articles were exported. The leather of this province was also wrought by the people; and although iron was worked to some extent, it was deemed inferior to that which was imported from Great Britain, this being considered much the best, as it was wholly used in shipping. The same report stated, that all the iron works within its bounds did not make one-twentieth part of the amount required for its consumption. Nor did New York at that time exhibit the degree of manufacturing enterprise which was deemed detrimental to Great Britain—provisions, furs, whalebone, pitch, oil, and tar, constituting the principal portion of its trade. That of New Jersey was no more formidable in this respect, as its traffic consisted of necessary articles shipped from Pennsylvania and New York. To these articles may be added, a little linen and cotton cloth, brown holland, 'for women's wear,' a paper-mill, that manufactured to the amount of 200*l.* yearly, in the province of Massachusetts bay, besides six furnaces and nineteen forges for making iron, that had been constructed in New England. In Rhode Island there were no manufactures returned; and the province of Connecticut produced timber and boards, all sorts of English grain, hemp, flax, sheep, black cattle, and swine, goats, horses, and tobacco. The manufactures in this colony were inconsiderable, the greater portion of the people being engaged in tillage, while others were employed in the various handicrafts, such as tanning and shoemaking, in building, joining, tailors' and smiths' work. At this period the colony of New York was enabled to pay for the foreign fabrics imported from Great Britain, by being permitted to exchange their provisions, and those of New Jersey, as also horses and lumber, with the foreign colonies, for money, rum, molasses, cocoa, indigo, cotton, and wool. Horses and lumber were exported from Connecticut in return for sugar, molasses, salt, and ardent spirits. In Pennsylvania, brigatines and small sloops were built, which they sold to the West Indies, and 'the surveyor-general of his majesty's woods' states, that in the province of New England many ships were built for the French and Spaniards in exchange for rum, molasses, wines, and silks, which 'they truck there by contrivance.'—*Report of Board of Trade.*

Such was the condition of American manufactures in 1732; and the policy which was persevered in towards the plantations, by recommendation of the Board of Trade, was, "to give these colonies proper encouragement for turning their industry to such manufactures and products as might be of service to Great Britain, and more particularly to the production of all kinds of naval stores."

Acts were, accordingly, passed by the British parliament, in order to prevent the progress of colonial manufactures; and, from the information which had been received, *that hats were made to a considerable extent in these colonies, it was provided, by statute passed in 1732, that no hats should be exported; the same act limiting the number of apprentices who were to be engaged in this business, and prohibiting the exportation of hats from one British plantation to another, as well as the manufacture of hats, excepting by those who had served an apprenticeship of seven years, and forbidding any black or negro from making hats at all. The manufacturer of iron was also regarded with equal jealousy; and, although the colonies were permitted, by a law that was enacted in 1750, to im-*

port pig and bar iron into Great Britain free of duty, its object was to monopolise its *manufacture*. All factories in the colonies were deemed "a common nuisance, and were required to be abated within thirty days after the evidence of their existence should be adduced, under a penalty of 500*l*." These acts were justly deemed by the colonists usurpations of their right: "for why," said they, "ought not the manufacturers of this country have been permitted the same privileges as the same classes in England?"

"Among the most just causes of complaints in the British colonies against the British government were the restrictions which discouraged manufactures. To prevent a whole people from following any branch of industry is assuredly a measure which human nature cannot bear with tame submission: nor can the severity of the regulation be denied, even on the ground that the articles prohibited could be imported cheaper from England. The injury felt by the prohibition was not at the time of much consequence; but the regulation was in itself considered an insult to the understanding of the colonists far more intolerable than previous oppression."*

During the war of the revolution, the Americans continued and increased their manufactures, of *home-made woven cloth*: that is, woollen cloths, linens, &c., spun, woven, dyed, or bleached, on the premises of the farmers, and of the other inhabitants. This has from an early period been, and has continued to be, the case in all the North American settlements; in which the colonists have also, as far as possible, made their axes, common tools, agricultural instruments, and various articles necessary for their use.

From the peace of 1783 to 1791, some attempts were made to establish, on a larger scale, new manufactures, but generally without success.

Mr. Pitkin, who deserves great praise for his labours, but whose mind was not sufficiently clear, nor his judgment so expansive or sound, as to understand the delusive fallacy of the protective system, observes—

"One of the objects which claimed the attention of the first Congress, under the new form of government, was the encouragement and protection of the manufacturing, as well as the commercial interests of the country. In laying duties on imports in July, 1789, Congress had reference, as the preamble of the act, imposing them, declares, to 'the encouragement and protection of manufactures.' This was, also, openly avowed, on the floor of the House of Representatives, in the debates on the first tariff, established by the general government.

"The first secretary of the treasury (Hamilton), whose powerful mind seemed intuitively, fully to comprehend every subject, to which it bent its force, was the great advocate of American manufactures.

"In his celebrated report on this subject, presented to the House of Representatives, in January, 1791, every argument was urged, and we may truly add, exhausted, in favour of the policy and expediency of protecting and encouraging this branch of domestic economy."

The fallacious system of protective duties was immediately after introduced.—
(See Commercial Legislation of the United States hereafter.)

"Some branches of domestic manufacture had, at that time, made such progress, as in a great measure to supply the home market. Among these the secretary mentions those of skins and leather, iron, wood, flax and hemp, bricks, coarse tiles and potters' ware, ardent spirits and malt liquors, writing and printing paper, sheathing and wrapping paper, press paper and paper hangings, hats, women's stuff and silk shoes, refined sugar, oils of animals and seeds, soap, spermaceti and tallow candles, copper and brass wares, particularly for distilleries, sugar refiners, and brewers, andirons and other utensils for household use, philosophical apparatus, tin wares for most purposes of ordinary use, carriages of all kinds, snuff, chewing, and smoking tobacco, lamp black, and other painter's colours, and gunpowder. These articles were made in manufactories, by the way of regular trades. In addition to these, great quantities of cloths of wool, cotton, and flax, or mixtures of them, were made in families, in every part of the country; and to such extent, as

* Macgregor's *British America*, 2nd ed., vol. i., p. 17, *et seq*.

the secretary says, in some districts, as to supply two-thirds, three-fourths, and even four-fifths of the clothing of the inhabitants.*

It appears that in 1791, when Mr. Hamilton drew up his report, establishments for the manufacture of cotton and wool had commenced in Rhode Island, Massachusetts, and Connecticut; and a company with 500,000 capital, had been formed, for a cotton establishment at Patterson, in New Jersey, and afterwards commenced business at that place. The first cotton factory in the United States, was established at Providence, by Almy and Brown, and Mr. Samuel Slater, a cotton manufacturer from England.—(See Cotton Manufactures hereafter.)

A cotton manufactory was established at Beverley, in Massachusetts, in 1789 or 1790, by a number of residents in that town, who were aided by the legislature of Massachusetts. Washington appeared, on delivering his message to Congress, in a suit of cloth manufactured in this factory presented to him by its owners. The articles then made in these establishments, were principally corduroys, fustians, and jeans. About the same time, a woollen factory was established at Hartford, in Connecticut.—*Pitkin's Statistics.*

Returns were, in 1810, prepared by order of the federal government of the manufactures of the union.

The returns from Pennsylvania, Connecticut, Massachusetts, New York, and Virginia were considered the most perfect, though in many respects defective. From these returns, an estimate, or digest, of the value of the manufactures of the United States at that period, 1810, was made by Mr. Tench Coxe, selected for that purpose by the secretary of the treasury, and was as follows:—

	dollars.		dollars.
1. Goods manufactured by the loom, from cotton, wool, hemp, flax, and silk, including stockings	39,497,057	11. Manufactures from grain, fruit, and case liquors, distilled and fermented	16,528,206
2. Other goods spun from the fine materials above enumerated	2,032,120	12. Dry manufactures from grain, exclusive of flour, meal, &c.	1,707
3. Instruments and machinery manufactured, estimated at 180,000 dollars, carding, fulling, and floor-cloth staining by machinery, estimated at 5,957,816 dollars	6,144,446	13. Manufactures of wood	5,554,708
4. Hats of wool, fur, &c. and from mixtures thereof	4,328,744	14. " of essences of oils	179,150
5. Manufactures of iron	14,364,520	15. Refined sugar	1,415,724
6. " of gold, silver, set-work, mixed metals, &c.	2,483,912	16. Manufactures of paper, paste boards, cards, &c.	1,939,285
7. " of lead	325,560	17. " of glass	1,047,004
8. Soap, tallow, candles and wax, spermaceti, and whale oil	1,706,202	18. " of marble, stone, and slate	462,115
9. Manufactures of hides and skins	17,935,477	19. Earthen manufactures	259,720
10. " from seeds	858,589	20. Tobacco	1,260,378
		21. Drugs, dye-stuffs, and dyeing	500,382
		22. Cables and cordage	4,243,168
		23. Manufactures of hair	129,731
		24. Various and miscellaneous manufactures	4,347,011
		Total	127,094,602

The spinning, and dyeing, and weaving of cotton and wool were then principally confined to the houses of the farmers and other inhabitants. In which way Mr. Gallatin considered that about two-thirds of the clothing (including

* The *Lowell Courier* contains a letter from Mr. Louis M. Norton, of Goshen, Connecticut, to Mr. Samuel Lawrence, of Boston, which gives the history of one of the first, if not quite the first, systematic effort to manufacture woollens upon an extended scale. "This occurred in 1813—14, and looks strangely in comparison with things in 1843. Three men, of whom Mr. Norton was one, put together a capital of 6000 dollars, and established a factory in Goshen, which cost over 3000 dollars. Wool cost 1 dollar 50 cents per lb., and badly made broadcloths brought from 8 dollars 40 cents to 12 dollars per yard. One invoice of 178½ yards brought a total of 1769 dollars 33 cents. Another invoice of 255 yards brought 2551 dollars 15 cents, or more than 10 dollars a yard. Such cloths, if they would sell at all now, would bring about one dollar a yard. But, as it was, the war came to an end—a deluge of English cloths overwhelmed the little Yankee factory, and the partners settled up with the loss of the capital, and three times as much more. Such is an outline of the first essay, or one of the first, at making broadcloths in this country, and the losses were hardly an apology for the hundreds of thousands which have been lost since; through all of which, however, the Yankees have gone on undaunted, until, in many articles, they are now able to defy the skill of the old nations. In those days, merino sheep were the most beautiful animals which walked the earth, and their price was from 1000 to 1500 dollars. He was a great man who owned a sheep, and not a small man who could say that he owned a quarter of one."

hosiery), of the house and table linen worn, and used, by the inhabitants of the United States were made.

The number of cotton mills in 1809 was eighty-seven ; sixty-two of which (forty-eight water and fourteen horse mills) were in operation, and turned 31,000 spindles. The other twenty-five were so far advanced as to be in operation in the course of the year 1810.

Mr. Gallatin estimated the amount of capital employed in the mills at 4,800,000 dollars, the quantity of cotton used 3,600,000 lbs., the yarn spun at 2,880,000 lbs., valued at 3,240,000 dollars, the men employed 500, and the women and boys 3500.

By the return of the marshals, the number of cotton factories was 168, with 90,000 spindles ; but from many of the states no returns were made of the quantity of cotton used, the yarn spun, or the cloth made. Massachusetts had fifty-four, most of them small, having, in the whole, only 19,448 spindles, and spinning 838,348 lbs. of cotton, valued at 931,916 dollars. Rhode Island had twenty-six factories, with 21,030 spindles ; and Connecticut fourteen, with 11,883 spindles.—*Pitkin*, p. 472.

According to the returns of the marshals for 1810, the quantity of cloth made of wool, cotton, and flax, and their mixtures, in each state, with the estimated value, and the number of looms, also, in each state, were as follow :—

* By estimate, the value only being returned.

Mr. Pitkin considers that the foregoing quantities and values were short of the truth, as many families were, probably, unable to give very accurate accounts ; and many more, jealous, that the object was taxation, either refused to give any account whatever, or certainly not to the full amount. The marshal of Rhode Island informed the secretary, "that much patience and forbearance was required by his assistants, from the prejudices of the people, who, in many instances, refused to give any account of their manufactured articles ; and, perhaps, not any article to the full amount or value, from an opinion, that the returns were demanded by government, with a view of taxing their industry." In consequence of this, the marshal was of opinion, that the articles manufactured might be justly estimated, from twenty to twenty-five per cent above the amount returned ; from which Mr. Pitkin concluded that the value of manufactures of wool, cotton, and flax, in 1810, exceeded 40,000,000 dollars.

The war between the United States and Great Britain, which followed, compelled the Americans to manufacture for themselves: particularly woollen and cotton goods; and many millions of capital were invested in the establishment of woollen and cotton factories.—(See Cotton and Woollen Manufactures hereafter.)

The principal object of the convention, which met at New York, in October, 1831, was, to collect information with respect to particular manufactures; and for this purpose, committees were appointed, composed of persons selected from different parts of the United States.

The attention of these committees was directed to the manufactures of cotton, wool, iron, and steel, salt, hats, cabinet wares, glass, sugar, and molasses, and to the subject of chemistry, as connected with manufactures and the mechanical arts. From these reports and from various official and other documents, the following account of the manufactures of the United States are drawn up.

CHAPTER XIII.

RISE AND PROGRESS OF THE COTTON MANUFACTURES OF THE UNITED STATES.

THE efforts of the citizens of the United States to manufacture cotton woven goods, made little progress until some years after the war of the revolution: though, during that war, woven articles had been manufactured for domestic wear.

It was long found impossible, even under the system of protective duties, to compete with the cottons produced by the aid of machinery in England. The genius of Arkwright enabled the latter, in defiance of high taxation and that bane of manufactures, as well as of agriculture, the corn laws, to spin and manufacture cottons for most countries, including the United States. Nor, would the latter have succeeded to the extent to which they have done, in the New England and other states, if England had never imposed high taxes on bread and other food, to make both dear; and if no duty had ever been levied in the United Kingdom, on cotton wool and other raw materials.

We have stated in our description of the several states, the localities, the number, and the value of the products of the cotton, as well as the other manufactures of the United States. Under the head of the Manufactures of Massachusetts, and especially of Lowell, we have given copious details. The following extracts from a pamphlet, written in 1841, by the manager of the Saco cotton mills, in Maine, are worthy of attention; especially as showing how genius and capital is transferred from the United Kingdom to the United States.

“It is to be remembered that Sir Richard Arkwright took his first patent for an entirely new method of spinning cotton yarn for warps in 1769, at which period his first mill was put in operation at Nottingham, in England, and his second mill, which was much larger, was erected at Crom-

ford, Derbyshire, in 1771. After which, his mode of spinning by water-frames extended rapidly all over the kingdom; so that during the period when the most persevering exertions were being made by various enterprising individuals, in different parts of the United States, to improve and perfect this most important manufacture, England was enjoying all the benefit of Arkwright's patents, by means of which cotton yarn was produced at much less expense and of a superior quality to any that had ever been made by machinery before that period: and, at the same time, the British government were using every means in their power to prevent models or drawings of these machines from being carried out of the country. Every effort to erect or import this machinery into the United States had hitherto proved abortive. Much interest had been excited in Philadelphia, New York, Rhode Island, and Massachusetts, but they found it impossible to compete with the superior machinery of England.

"Such was the state of the cotton manufacture in the United States in 1790: every endeavour to introduce a proper system of spinning had been fruitless; and nothing but the introduction of the water-frame spinning, which had superseded the jennies in England, could have laid a foundation for the successful prosecution of the business in America, and that was happily accomplished by one who was personally and practically acquainted with the business in all its details. The individual here referred to was Mr. Samuel Slater, who has justly been called the *Father of the Cotton Manufacture of America*.

"Mr. Slater was born in the town of Belper, Derbyshire, England, on the 9th of June, 1768; and when about fourteen years of age, he was bound apprentice, at Milford, near Belper, to Jedediah Strutt, Esq. (the inventor of the Derby ribbed stocking frame, and for several years a partner with Sir Richard Arkwright, in the cotton-spinning business). At that time, Mr. Strutt was erecting a large factory at Milford, where Slater continued to serve him for some time in the capacity of clerk; but, during the last four or five years of his apprenticeship, his time was solely devoted to the factory, as general overseer, both as respected the making of the machinery, and in the manufacturing department. After having completed the full term of his engagement, viz., six and a half years, he continued for some time longer with Mr. Strutt for the purpose of superintending some new works that were then erecting; his design in doing so was to perfect his knowledge of the business in every department, as previous to this time his thoughts had been directed to America by various rumours which had reached Derbyshire, of the anxiety of the governments of the different states in that country to introduce and encourage manufactures. A newspaper account of a liberal bounty of 100*l.* having been granted to a person who succeeded in constructing a very imperfect carding machine for making rolls for jennies, and the knowledge that a society to promote manufactures had been authorised by the same legislature, finally determined him to try his fortune in the western hemisphere.

"He embarked at London for New York, on the 13th of September, 1789, and landed at the latter on the 17th of November, after a passage of sixty days. He was, immediately after his arrival, introduced to the New York Manufacturing Company; but, finding that the state of their works did not suit his views, he left that place in the January following for Providence, Rhode Island, and there made arrangements with Messrs. Almy and Brown to commence preparations for spinning cotton entirely upon his own plan. On the 18th of the same month, the venerable Moses Brown took him out to Pawtucket, *where he commenced making the machinery, principally with his own hands*; and on the 20th of December, 1790, he started three cards, drawing and roving, together with seventy-two spindles entirely upon the Arkwright principle, being the first of the kind ever operated in this country. These were worked by the water-wheel of an old fulling-mill in a clothier's building, in which place they continued spinning about twenty months, at the expiration of which time several thousand pounds of yarn were on hand, notwithstanding every exertion was used to weave it up and sell it.

"Early in 1793, Almy, Brown, and Slater, built a small mill in the village of Pawtucket, in which they put in operation seventy-two spindles, with the necessary preparation, and to these they gradually and slowly added more and more, as the prospects became more encouraging. After a short time, besides building another factory, they considerably enlarged the first.

"Such, then, were the circumstances under which the Arkwright mode of spinning was introduced into this country, and such was the individual to whom belongs the entirement of its introduction.

"Mr. Slater's business was so prosperous, that about the year 1806, he invited his brother, Mr. John Slater, to come to this country, who, in all probability, brought with him a knowledge of all the most recent improvement made by the English spinners. The now flourishing village of Slatersville, in Smithfield, was then projected, in which John Slater embarked as a partner, and in June of the same year, removed to Smithfield as superintendent of the concern. In the spring of 1807, the works were sufficiently advanced for spinning, and up to the present time, they have been under the management of that gentleman, in an uninterrupted state of improvement. This fine estate was owned, in equal shares, by four partners, but now wholly belongs to John Slater and the heirs of his brother.

"Cotton-spinning, according to the preceding statements, commenced in the then obscure village of Pawtucket in 1790, at which time only seventy-two spindles were put in operation.

"Previous to 1815, the whole weaving in the United States was done by hand-loom, in many of which considerable improvements had been made, and great quantities of cloth were manufactured for home consumption. About 1814, a Mr. Gilmour landed in Boston from Glasgow, with models or patterns of the power-loom and dressing-machine, whom Mr. John Slater invited to Smithfield, and made known to him his wishes to construct these important machines; but not being able to prevail on the whole of the partners to engage in the business, Mr. Gilmour remained some time in Smithfield, employed as a mechanic, where he introduced the hydrostatic press, which proved to be of great advantage in pressing cloth, &c.

"Judge Lyman, of Providence, had been endeavouring to construct a power-loom, but failed in the attempt. On hearing of Mr. Gilmour, he, with some other gentlemen, entered into a contract with him to build a power-loom and dressing-machine, from the patterns he had brought from Great Britain, which he did, to the great satisfaction of his patrons, from whom he received a compensation of 1500 dollars. These machines were soon after introduced into Pawtucket, where David Wilkinson commenced making them for sale. Gilmour was a man of great mechanical genius, but neglected to turn his talents and opportunities to the advantage of his family, and consequently, on his death, they were left in poor circumstances.

"The hand-loom was soon superseded by the others, the introduction of which greatly aided in extending the business in this country, and has enabled the American manufacturers to compete with Great Britain, in South America, India, and some other foreign markets."

The report on cottons, made by the committee of the convention, presents a detailed view of the manufacture of that article in various establishments, in the twelve states of Virginia, Maryland, Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, and Delaware. It appears, that in these twelve states, there were in operation, in 1834, cotton factories to the number of 795, viz.—

Having a capital (in fixtures principally) of dls. 40,614,984	And in these factories there was used	
Number spindles in operation was..... 1,246,503	pounds of starch.....	1,641,253
Number of yards of cloth made..... 230,461,000	Barrels of flour for sizing.....	17,245

The annual product, at..... do. 1,036,700	And the annual amount of wages..... do. 12,155,723
The annual wages, at..... do. 209,814	
The capital employed in printing cottons was estimated at..... do. 1,000,000	

This report including only twelve states, and it remarks that—

"In the southern and western states, no less than thirty establishments have been reported to the committee; but having no accurate returns from these states, they have preferred to omit them altogether. Some reluctance has also been found among the manufacturers in giving all the details required of them. A great proportion of them have mistaken the question respecting the capital which they employ, and returned only that which was invested in fixtures. The committee have not thought it proper to alter the amount so returned; but they will take the opportunity of saying, that so general has been this error, that they have no doubt that one-fourth to one-third, might with propriety be added under this head to the total amount." Cotton factories were at that time in operation in Ohio and Kentucky, and other states.

The foregoing account does not include the cotton manufactured in families, either from the yarn purchased from the factories, or spun in families by machinery made for that purpose.

* Making 214,882 bales, of the average weight of 361 $\frac{8}{10}$ lbs.

Remarks.—Delaware includes 162,000 dollars, and Pennsylvania 300,000 dollars, for the capital employing the hand-looms. The cotton consumed, 77,757,316 lbs., is 214,882 bales, of the average weight of 361 86-100 lbs.

HOURS OF LABOUR.—"The average time of working in the mills per day, is about twelve hours and a quarter. The female operatives remain in the employ of the companies, on an average, a fraction over three years. Their average ages probably range from fifteen to twenty-four. Very few are under fifteen, and not many over twenty-four. The expense of a female employed in the mills, exclusive of board, need not exceed forty dollars per annum, even when she dresses elegantly on sabbaths and holidays, and well every day. She may therefore save, in three years, 186 dollars, enough to purchase a small farm in the western country, or to decently furnish a young mechanic's or farmer's house in New England. It is a very important fact, that most of the girls employed in the mills take good care of their earnings. The cashier of the savings' bank informs me, that of 386,000 dollars deposited in that institution, 250,000 dollars belong to the operatives, mostly females, employed in the factories. Some young females come here from the surrounding country, work a few years, and employ their earnings to aid their fathers to pay small debts; some to procure the means of completing a genteel education at some one of our numerous New England academies. The majority, however, save their money to furnish the houses of their future husbands. It is supposed that their chances of marrying are increased, rather than diminished, by their residence and employment in the city. Not a few are betrothed before they enter the mills; and while the young men, to whom they were to be wedded, are labouring here or elsewhere for the means to purchase a farm and build a house, they labour for the means to furnish it, and in most cases successfully too."—Note to article in *Hunt's Magazine*.

EXPORTS OF DOMESTIC MANUFACTURES OF COTTON FROM THE UNITED STATES.

The following statement, showing the annual amount of the exports of domestic manufactures of cotton to each of the different countries to which they were chiefly exported from the United States in each year, from 1826 to 1842, have been compiled from the annual reports of the secretary of the treasury, on commerce and navigation;—

Mexico has been a regular, and, for several years, a large customer, as well for coloured as for white goods. Of the former, in 1826, she took 20,464 dollars; in 1835, 291,780 dollars; since then there has been a falling off in the amount, so that, in 1841, it was only 52,079 dollars. Of white goods she received, in 1826, 309,807 dollars; in 1835, 1,054,608 dollars; which has since gradually declined to 61,583 dollars, in 1841, owing, probably, to the perturbed state of that country:—

TEXAS, considering the unsettled state of the country since its independence, has formed a

considerable outlet for American manufactures, and, when established, will no doubt afford a permanent and extensive market. The first exports appear to have been made in 1837:—

Y E A R S.	Coloured.	White.	Y E A R S.	Coloured.	White.
	dollars.	dollars.		dollars.	dollars.
1837.....	9,593	50,053	1841.....	54,393	43,030

COLOMBIA has been a small but regular customer from 1826 to 1838, when Venezuela and New Grenada took her place:—

HOLLAND, in 1832, received 900 dollars, in 1837, 5027 dollars' worth of white goods, and in 1843 252 dollars' worth of white goods.

HANSE TOWNS, in 1826, took 315 dollars' worth of white goods; in 1832, seventy-two dollars; in 1834, 820 dollars; in 1839, twenty dollars; in 1840, 2150 dollars; in 1841, 1412 dollars; and in 1837, 288 dollars' worth of coloured goods; in 1842, fifty dollars of white; and in 1843, 885 dollars' worth of white goods.

BELGIUM, in 1840, received 341 dollars, in 1841, 10,894 dollars' worth of cotton goods, but in 1842 and 1843 none.

FRENCH WEST INDIES have constantly received a small amount, chiefly white goods.

and in 1826, twenty dollars' worth of coloured goods; 1827, forty-seven dollars; 1833, 472 dollars; 1834, 144 dollars; 1840, 158 dollars; 1841, sixty-eight dollars; 1842, coloured, 123 dollars; white, 7454 dollars; and in 1843, 479 dollars coloured, and 2243 dollars white goods.

FRANCE, on the ATLANTIC, received, in 1832, 100 dollars' worth, and in 1838, 310 dollars' worth of white goods. Her African settlements took, in 1830, 266 dollars' worth; and her ports on the Mediterranean, in 1830, received 1292 dollars' worth; in 1832, 450 dollars' worth; in 1835, 931 dollars' worth; in 1836, 1837, 1838, 1839, 1840, and 1841, none; in 1842, 2398 dollars' worth; and in 1843, none.

RUSSIA received, in 1830, fifty-two dollars' worth, and in 1839, 12,131 dollars' worth of white goods.

ENGLAND, and the dependencies of Great Britain.—To England, the amount is very small, and probably was only designed to exhibit samples of different American manufactures. In 1826, only 664 dollars' worth; in 1829, 450 dollars' worth of white goods. In 1828, the first coloured goods were sent, amounting only to 273 dollars; in 1830, 1852 dollars; in 1832, 2289 dollars; in 1833, 1861 dollars; in 1834, 4566 dollars, all white goods. In 1835, 573 dollars' worth of coloured goods; in 1836, 2233 dollars' worth of white, and 8580 dollars' worth of coloured goods; and in 1837, 11,899 dollars' worth of coloured goods, which appears to be the last export up to 1841. Several of her colonies have been regular customers, to some extent.

BRITISH EAST INDIES.—In 1827, the export commenced, and has been continued ever since, increasing, till, instead of deriving, as formerly, from this quarter, our principal supply of white goods, we received not a piece from thence in 1840 and 1841; but in each of those years furnished them with over 150,000 dollars' worth of our own manufacture.

In 1832, eighty-seven dollars' worth of coloured goods were exported to the East Indies; in 1838, 5914 dollars' worth; in 1839, 442 dollars' worth; in 1842, 9905 dollars' worth; and in 1843, 709 dollars' worth.

ST. HELENA.—In 1833, 2426 dollars' worth of coloured, and 1846 dollars' worth of white goods, were exported to this island; and in 1834, 1407 dollars' worth of coloured, and 7108 dollars' worth of white goods; none since.

The CAPE OF GOOD HOPE received from us, in 1826, 584 dollars' worth of white goods; in

1833, 865 dollars' worth; in 1835, 2,015 dollars' worth; in 1836, 1,023 dollars' worth; and in 1838, 552 dollars' worth. Here the exportation ceased.

GIBRALTAR.—There have annually, since 1826, been clearances of our manufactures for this port, chiefly white goods.

In 1828, 446 dollars' worth of coloured goods were exported; in 1830, 280 dollars' worth; in 1834, 2,153 dollars' worth; and in 1839, 933 dollars' worth.

MALTA.—Prior to 1834, Italy was included with Malta. In that year Italy received from the United States 2,041 dollars' worth of white goods; in 1835, 10,475 dollars' worth; in 1837, 11,695 dollars' worth; in 1838, 5120 dollars' worth; in 1839, 13,407 dollars' worth; and in the same year, 383 dollars' worth of coloured goods. Since then no exports of cotton goods have been made to Malta.

BRITISH WEST INDIES.—In 1826, eleven dollars' worth of coloured, and 1122 dollars' worth of white goods, were exported to the British West Indies from the United States. From that year, to 1831, there was no further export. Since then, it has amounted annually to more or less.

The supply of coloured cottons from France, appears from the foregoing table not to be diminished—of white goods there is a partial reduction.

* *Mousselines de Laines*.—"On the 1st of February, 1840, a new pattern of mousselines de laines arrived from France at New York, and was offered by the importer at fourteen cents per yard by the case. The agent of a Rhode Island calico-printing establishment forwarded a piece of the new style of goods to Providence the day after their arrival, and in sixteen days he had the same style of goods, and of equal fabric, in New York, selling at ten cents per yard. The manufacturer had but twelve days to engrave the new pattern on a copper cylinder, from which the engraving was raised on a steel cylinder, then hardened and made ready for impression; the compound of ingredients for colour discovered by chemical experiments; the cloth printed, dried, and cased for market."—*Hunt's Magazine*.

* All the statements of imports and exports for 1843 are for the nine months ending the 30th June. All previous statements are for the year ending 30th September. For subsequent years, according to Act of Congress, the statements are to be for the years ending 30th June.

WOOLLEN MANUFACTURES.

The manufactures of woollen cloths have certainly not succeeded so extensively, nor so advantageously as those of cotton. But if we take into account the common woollen cloths, generally in America called *home spuns*, these fabrics

have been, and continue to be, of great importance in nearly all the agricultural districts, except in those of the southern slave states. The wool of all the sheep in the United States being spun, dyed, and woven, milled and worn in the country, is sufficient proof of the fact that it supersedes so much for wear of other fabrics. The high duties, however, increase the price to the weaver of all woollen fabrics, so long as there is not a surplus of domestic woollens over the general consumption of the country.

The number of sheep in the United States, in 1831, was estimated at 20,000,000. In 1825, there were, in the state of New York, from actual returns, 3,499,549. The quantity of wool, taking an average of three years, was estimated by a committee, in 1831, at 50,000,000 lbs. per annum, and the quantity imported, to be spun and woven in factories and families, amounted, in 1831, to 5,622,962 lbs. Mr. Pitkin observes that,

"Although the returns in relation to the manufactures of the United States, made to the secretary of the treasury, in 1832, in pursuance of an order of the House of Representatives, were generally deficient; yet they show, that, in some of the states, the manufacture of wool, cotton, and iron had been carried to a great extent, in fixed establishments. In Massachusetts, the value of woollens, in these establishments, exceeded 6,500,000 dollars. In the county of Worcester alone, in that state, the manufacture of wool amounted to 2,499,500 dollars, and the value of agricultural products consumed by the labourers in the woollen establishments, in that county, according to returns of the manufacturers, was 1,776,000 dollars.

"In estimating the value of woollens made in this country, it should be borne in mind, that, notwithstanding the numerous fixed establishments for the manufacture of this article lately erected, household, or family manufactures of wool, and mixtures of wool and cotton, are still carried on to a great extent.

"In the year 1810, the whole number of fulling mills in the United States, as returned by the marshals, was 1682, and the carding machines 1630; and, in 1825, in the state of New York alone, the number of the former was 1222, and of the latter, 1580; and it will be remembered, that the number of looms in this country, in 1810, was 324,998, principally in families.

In 1825, the number of yards of filled cloth made in families, in the state of	dollars.
New York, as official returns show, was 2,918,233, valued at	2,918,233
The number of yards of flannels, and other woollens, not filled, was	
3,468,001, valued at twenty cents per yard	693,600

Making..... 3,611,833

The value of the same kinds of cloth, made in families in that state, at the present time (January, 1835) must be, at least, 4,500,000 dollars; and there can be little doubt, that the household manufactures of wool, in New England, must equal, if not exceed, those of New York. The agent appointed by the secretary of the treasury, to ascertain the manufactures in New Hampshire, states, in his return, that in 125 towns, whose population was 148,647, one-half of the clothing of the inhabitants was made in families; the value of the whole being estimated at 2,380,048 dollars. The greatest part of the cloth made in these towns must have been woollen.

"The agent for New Hampshire, however, and those employed by him, attended to these subjects of inquiry, much more than the agents in the other states; and his answer will tend to elucidate the question now under consideration. He stated, in his return, 'that in the counties of Rockingham, Stafford, Grafton, and Coos, containing 125 towns, and 148,647 inhabitants, the expense of each individual, annually, for cloths of all descriptions for *wearing apparel*, is sixteen dollars, making the expense to the whole population, of 2,380,000 dollars. Allowing,' he adds, 'seven persons to a family, there would be 21,250 families, the average expense to each of which, for bedding, carpeting, table linen, &c., is nineteen dollars, equal to 403,712 dollars; so that 2,783,860 dollars are yearly expended for cloths, for wearing apparel, bedding, carpeting, &c. Something more than one-half of these cloths are manufactured in families.' The expense of clothing each individual in the counties of New Hampshire, above referred to, was sixteen dollars; and as this clothing must have consisted principally of woollens and cottons, we think the sum of ten

dollars for each person in the United States, for this kind of clothing, cannot be deemed an over-estimate.

"The manufacture of carpets has lately increased in this country very rapidly. In December, 1834, there were in operation, in the United States, at least, 511 carpet looms, in from eighteen to twenty factories; of which eighteen were for Brussels, twenty-one for what are called treble ingrained, 424 for other ingrained, forty-four for Venetian, and four for damask Venetian; and that the number of yards of carpeting, produced yearly from these looms, was as follows:—

	yards.
Brussels.....	21,600
Three ply	31,500
Other ingrained	954,000
Venetian	132,000
Damask Venetian.....	8,400
Making.....	1,147,500

The average value of carpeting may be estimated at one dollar per yard."

Such, according to Mr. Pitkin, was the state of the woollen manufactures in the year 1834; and he states that there were in other states a great quantity of common carpeting made in the houses of families.

In 1840, the number of sheep in the United States, are given in the marshal's returns—(see Table of Live Stock)—at 19,311,374. The annual quantity of wool at 35,802,114 lbs. If these returns be true, the estimate given in the report for 1831 (viz., 20,000,000 sheep), must have been either greatly exaggerated or there has been but little increase since that period; which is not likely, unless the increased demand for mutton for food has been equal to the annual increase of the number of sheep. The estimate of the quantity of wool, in 1831 (viz., 50,000,000 lbs.), must have also been greatly overrated. Other statements estimate the number of sheep in the United States as much greater than the official returns. Some authorities as high as 35,000,000.

"Hosiery," says Mr. Ellsworth, "is now made in the United States with astonishing rapidity, by the aid of the power weaving loom, an American invention, which has not yet been introduced into England. While, there, it is a full day's work to knit by hand two pairs of drawers, a girl, here, at two dollars fifty cents per week, will make, by the power-loom, twenty pairs in the same time. A piece, twenty-eight inches in width, and one inch long, can be knit in one minute, thus reducing the expense of manufacturing this article one-tenth of the former method by the hand-loom. The importance of this improvement may be estimated from the fact, that the quantity of hosiery used in the United States is valued at 2,500,000 dollars; and the stockings, woven shirts, and drawers, made in this country, at 500,000 dollars."—*Report for 1843*

The exports of woollen manufactures from the United States are not of sufficient importance to be enumerated.

For the number of woollen factories, fulling mills, persons employed, value of fabrics, and capital invested, see tabular statements hereafter.

1844.....									

MANUFACTURES OF SILK.

The only information that we possess, on which we place any dependence, on the subject of silk manufactures in the United States, are Mr. Ellsworth's reports. He observes:—

"That the manufacture of silk has been carried to great perfection. A large establishment in Baltimore manufactures immense quantities of silk and worsted vestings, employing some fifteen or twenty Jacquard looms, and working up large quantities of domestic silk; and yet they dare not let it be known that their goods are manufactured in this country. But there are other manufactories in various parts of the country, which furnish sewing silk, fringe tassels, gimp, satin, velvet, and other silks. The uniform testimony of those employed in these establishments (some of whom have followed the business for twenty or twenty-five years in England), is, that they never saw finer, or as fine silk, as the American, when carefully prepared. It is said to give a stronger thread than foreign silk, and, by many manufacturers, is altogether preferred. The experiment of making paper from mulberry leaves, which is said to have been successful in France, is to be fully tried in this country the present year. It is said that a discovery has been made, that pongee silk is produced from the fibrous bark of the mulberry, and that it has never passed through the silkworm. It is also said, on the same authority, that 'there is nearly 100 per cent difference in the use of foliage in raising cocoons. That to produce one cwt. of cocoons, from twenty to twenty-two cwt. of foliage of grafted trees, propagated by grafting buds, cuttings, or layers, is necessary; while from twelve to thirteen cwt. of leaves from seedlings will accomplish the same result.'

"The *profit and feasibility* of the raising and manufacture of silk are also fully established. One person, who produced raw silk, says, that his net profit was equal to sixty dollars per acre. At a large establishment in Massachusetts, the profits are estimated at thirty-seven and a half per cent. To show the kind of manufacture, and the amount of capital invested, and nature of expenses, we insert the following account with reference to a fine manufactory in Ohio:—My factory is in full and successful operation, producing more goods than at any time previous. Our operations, as per factory books, and account stock, taken August 8th, for the past sixteen months, are as follows, in a condensed form, viz:—

Cash value of factory buildings	dollars.
Do to, ditto, machinery, engine, and permanent fixtures	1,340
1,067 bushels of cocoons purchased	4,060
280 lbs. reeled silk purchased	3,600
	1,100

Carried forward 10,100

The importations of silk are one-fourth more than of any other article.

	dollars.
The amount of cotton manufactures imported was	14,692,397
Of iron	12,051,668
Of cloths and cassimeres	7,025,898
Other woollen manufacture.....	3,507,161
One-half the value of silks and worsteds.....	1,159,942
Total woollen goods	18,831,907

(For further details, see tabular statements of the manufactures of the United States.)

MANUFACTURE OF FLAX AND HEMP.

In the early history of the colonies, Douglas, in his Summary, informs us, that the people from the north of Ireland, in 1750 to 1759, had greatly improved the fabrics of linen, and all manner of spinning, and for a long period linens made in families of the flax grown in the country, was generally worn by the agricultural population.

In 1810, the quantity of linen cloth made in families, as returned by the marshals, was 23,503,590 yards, then valued at 8,261,361 dollars; in some of the states, however, that made from flax was not distinguished. In New York, the quantity made from flax, was 5,372,645 yards, valued at 2,014,741 dollars, or about forty cents per-yard; and in Virginia, was 5,155,798 yards, valued at 1,718,599 dollars, or thirty-three and one-third cents per yard. Since that period, we have no data, by which to determine either the relative increase or decrease of the linen manufacture, nearly the whole of which is still carried on in families. In proportion to the population, it has, no doubt, decreased. In 1824, the quantity of linen and cotton cloths made in families, in the state of New York, was 8,079,992 yards, then valued at 1,211,998 dollars, or fifteen cents a yard. The returns did not show the quantity made from flax, but it was probably one-half.—*Pitkin*.

The manufacture of cotton bagging has increased, with the increase of cotton, and has become an article of no small importance to the cotton planter. It has, in the same ratio of increase, supplanted bags made of hemp and flax.

In 1833-4, according to Mr. Pitkin, there were about 1,100,000 bales of cotton raised in the United States, requiring about five yards of bagging for each bale, making 5,500,000 yards necessary for the annual consumption. The average quantity of this article imported, in the years 1832 and 1833, was 1,112,000 yards, leaving for consumption of domestic production, say 4,400,000 yards, which, at twenty cents per yard, is 880,000 dollars; and the whole value of the domestic manufacture of flax and hemp, in the United States, he is of opinion ought not, at that time, to be estimated higher than between 5,000,000 and 6,000,000 dollars.

By a joint resolution of Congress, agents are to be appointed, to reside in Kentucky and Missouri, for the purpose of purchasing water-rotted hemp; and the said agents are restricted, by the resolution, in their operations, so far as regards price and quality, that *the article is not to cost government any more than the same quality may be bought for in seaport towns*. "The quantity," says *Laford's Commercial Journal*, "will probably depend upon the wants of government, expressed in

the form of requisitions at irregular periods, in the shape of proposals to supply the demand required at named points."

The ability of the western states to furnish hemp, may be inferred from the fact that, in 1840, according to the report of the marshals appointed to take the census, Kentucky returned 9992 tons of hemp and flax, and Missouri 18,010 tons. The manufactures in the former, from flax, are put down in valuation at 7519 dollars, and of cordage, at 1,292,276 dollars. In the latter, there are no manufactures from flax, but of cordage, to the amount of 98,490 dollars—total value of cordage (which, we presume, means principally bale rope), 1,390,766 dollars. A small portion, only, of flax could have been included in the return of Kentucky, from the proportion the manufactures appear to bear towards that of hemp.

It appears that there were grown, in Kentucky, in 1842, 14,000 tons, equal to 28,000,000 lbs. of hemp. From this amount, it is estimated there was manufactured, in 1843, 6,500,000 yards of bagging, and 7,000,000 lbs. of bale rope. Of the bagging, 2,000,000 yards were made by steam factories, and the remaining 4,500,000 yards by hand looms, there being about 300 of the latter in the state, each of which to be woven 15,000 yards. The counties which produced hemp, are—

COUNTIES	Tons	COUNTIES	Tons
Jefferson	500	Fayette	3000
Shelby	1000	Mason	1500
Woodford	2000	Jessamine	1500
Franklin	500	Mercer and Boyle	500
Scott	1000	All others	2000

The 300 looms are distributed—Woodford county, sixty; Fayette county, eighty; Franklin county, thirty; Scott county, thirty; Jessamine county, thirty; Mason county, twenty; all other counties, fifty.

The St. Louis Chamber of Commerce reports that hemp is fast becoming a leading article of trade in that city. "There are already two large manufactures of bagging and bale rope here, and several rope-walks, and there are a number of establishments in various parts of the state. The quantity of hemp manufactured and exported, in 1842 amounted to 1460 tons, and the quantity grown in this state was 1500 or 1600 tons, of which 380 tons were shipped to Kentucky, twenty tons to New Orleans, and the balance manufactured in this state." *Cables and cordage* are extensively manufactured for the use of shipping and river craft.—(See tabular statement of manufactures.)

LEATHER AND LEATHER MANUFACTURES.

This branch is of great extent and importance, especially in the states of New England, New York, and Pennsylvania. Mr. Pitkin, in his statistics, brought down to 1834, says:—

"The business of making shoes, boots, saddlery, harness, and trunks, is carried on in almost every village and town throughout the United States. The inhabitants of some towns are almost exclusively employed in making shoes alone. In the town of Lynn, in Massachusetts, the number of shoes made in 1832, was 1,675,781, valued at 942,191 dollars; giving employment to 1741 males, and 1775 females. Many of the fishermen at Marblehead, not finding a market for their fish, have lately turned shoemakers.

"The manufacture of leather is carried on to a great extent in the states of New York and Pennsylvania. From fifty-three tanneries, in the former state, there was sent to the city of New York, in 1831, sole leather to the value of 1,578,900 dollars; when to this was added, the sole leather of other tanneries, and also the upper leather, calf skins, goat and sheep skins, from the other principal tanneries, the value was estimated at 3,458,630 dollars."

"The improvement," says Mr. Ellsworth, "in the manufacture and making up this article, has also greatly reduced the price of shoes. By further inventions to render leather water-proof, likewise, much has been done to protect the health, and promote economy. Those who have not turned their attention to this subject, may be surprised to learn that leather, made water-proof in the best manner, will last at least one-third longer than other kinds. Allowing, therefore, three dollars per head for each person in the United States for shoes, the cost of the whole article in the country would be 30,000,000 dollars, one-third of which, sold, would be over 16,000,000 dollars."

In the New York manufactory of shoes by machinery, it is stated, that—

"The sole-leather is first pressed between wooden rollers, which makes it extremely firm and compact; much more so than hammering can do. It is then placed under a cutting machine, which, at one operation, cuts it into the proper shape. Meantime, another machine is busy making steel wire into screws of about three feet in length, all of which is done with surprising celerity. A fourth machine punches the soles with holes, inserts the screw, and cuts it off at the proper length. All that is then necessary, is to rivet the screws by a few blows with a hammer, on an anvil. The soles manufactured in this way are superior to the Napoleon, inasmuch as the rivets adhere better, and the leather is rendered more compact. They are produced with infinitely less labour, and can be afforded about fifty per cent cheaper."

On the subject of the leather manufactures, *Hunt's Merchants' Magazine*, for 1844, affords the following information:—

"It is within the last twenty years that the manufacture of leather, sole-leather more particularly, has risen to high character and importance in the state of New York.

"Previous to this period the tanning of leather had been carried on chiefly in Pennsylvania, New Jersey, Maryland, and Delaware, and in the eastern states, Connecticut, Massachusetts, and

Vermont, the former tanning *exclusively* with oak bark, and the latter *chiefly* with hemlock.* Indeed, it may be truly asserted that the New York market was supplied almost entirely with leather from these different sections of our country; and behold the change; the state of New York has become now the tanning region, the city of New York the great leather market of the union, and there are more foreign hides imported into the city of New York than in any other city in the world.

"The first effort of consequence made to establish large tanneries in this state was by an association of gentlemen, under act of incorporation, styled the 'New York Tannery.'

"The company located their tannery in the town of Hunter, Greene county, twenty miles west of the North river; and, after prosecuting the business for a period of five years *unsuccessfully*, were compelled, finally, to close up their affairs, sell their lands and buildings, and abandon to individual enterprise the task of rearing up and firmly establishing this business in the new region.

"The spur, however, had been given, the impulse felt, and long before the company had ceased its operations, many extensive tanneries, capable of competing successfully with those of other states, and rivalling the great incorporated pioneer, had started into existence. Indeed, when we recur to that early period in the history of tanning in this state, and then dwell on the present, we are struck with wonder at the rapid progress and stirring enterprise everywhere exhibited. In every hemlock forest, on every falling stream, and accompanying the interior settlements in every direction, may be seen tanneries of the largest structure, giving employment to the wood-cutter, the bark-peeler, the teamster, and the wheelwright; and under the consuming fires of their never-glutted 'leeches,' the forests of hemlock are rapidly giving place for the plough of the husbandman; villages and mills arising as by the bidding of an enchanter's wand, where before was the inaccessible waterfall; and macadamized roads and turnpikes, traversing mountains heretofore deemed impassable.

"In the region of the Catskill mountains, the great sole leather tanning district, and in an extent embraced within the limits of the counties of Greene, Delaware, Schoharie, Sullivan, and Ulster, there were, in the year 1820, but three tanneries of any considerable size, and the amount of leather manufactured in them of trifling importance—in the aggregate, perhaps, 40,000 sides; value, some 100,000 dollars. There are now in the same district, without enumerating many small ones, fifty-six tanneries of capacity sufficient to manufacture annually 328,000 hides, equal to 636,000 sides, or 9,840,000 lbs. of sole leather, and in value 1,672,800 dollars!!

"The tannery at Prattsville, in the state of New York, is described as to have existed and thriven by Colonel Pratt commencing the world with that sometimes useful companion, *Pecerty*, and, after struggling through the early period of his life with the difficulties and embarrassments incidental to such a connexion, he resolved to seek his fortune 'farther west.' With this determination, he penetrated what at that period (1824) was deemed almost a wilderness, the interior of the Catskill mountains. A situation on the banks of the Schohariekill presenting to his mind great natural advantages he resolved to establish himself there. In the incredibly short space of *sixty days* (we have the fact from himself), he had his tannery erected, and ready to commence operations.

"He then procured a stock of hides† in the city of New York, which he transported over the mountains to his factory, by the most difficult and unbroken roads. In a new country, inconveniences and difficulties presented themselves in every shape—new machinery to be tried, altered, or thrown away, unskillful workmen and labourers to be trained and 'broken in,' bark to be peeled, and dragged from the mountains. In addition, the stock of leather, injured by negligence or want of skill on the part of his workmen, was returned to a low and glutted market, and forced off at ruinous prices. All these adverse circumstances were enough to discourage him, but did not; they only served to awaken still further his energies, and stimulate him to renewed exertions. He is now, after the lapse of sixteen years, the proprietor of the largest tannery in America, perhaps in the world, the *purchases and sales* for which have amounted during that period to the immense sum of *two millions and a half of dollars*, in the centre of a beautiful village numbering in population some thousand inhabitants, containing an academy erected at his own personal cost, and which he now offers to endow with 5000 dollars, conditioned that a like amount be raised by the inhabitants; two handsome churches which he aided liberally in building, and still continues

* "It is observable that in this country, wherever the hemlock forests terminate in regions too warm for its production, there the oak forests commence; consequently, the oak is used in the middle and southern states, almost exclusively, while in the latitudes north of the city of New York the same remark may be applied to hemlock."

† Colonel Pratt connected his tanning operations with the house of Gideon Lee and Co., in the city of New York, with whom he continued it for a period of fifteen years, until the senior members of that house retired from active business.

to help sustain; a carpet and India-rubber manufactory, employing fifty travelling agents; three grist-mills, seven saw-mills, five shingle machines, six stores, three hotels, four black-smith shops, and a number of other mechanical trades and professions.

"It is estimated that the state of New York manufactures one-third of the whole quantity of leather tanned in the United States. There are about 430 tanneries, and the total value of leather annually is about 6,000,000 of dollars. The importation of sole leather into the United States has entirely ceased, and *although there exists a protective duty of twenty-nine per cent, it is entirely unnecessary*; indeed, were foreign markets thrown open to us, we hazard little in asserting that we could export *sole leather* to the European markets to advantage. English sheep (in the raw state chiefly), and French calf skins finished, are imported into the country in considerable quantities, and we believe profitably, but the value is trifling, compared with the great staple, sole leather.

"The hemlock tanneries are generally constructed of wood; all the tanning vats are under cover of the building, and are kept warm by means of stoves and heaters, in order that the operations may proceed as well during the cold, as warm seasons. The old plan, and the one pursued still in the oak tanning districts, is to lay away the leather and cover up the vats in the winter (thus being out of doors and exposed to the severity of the season), and open them again in the spring, in this way much time was lost, and the tanneries were unable to tan out but a single stock in the year. The size of the larger class of tanneries is from 150 to 400 feet in length, by thirty to fifty feet in width, containing from 100 to 300 vats—and two to eight large heaters, in which the bark is *steamed or boiled*, for the purpose of extracting the tanning; their capacities range from 3000 to 20,000 hides per annum. The Prattsville tannery is capable of tanning out within the year, 25,000 hides, or 50,000 sides of sole leather. They usually tan two stocks in the year, that is to say, the hides 'worked in' in the spring, are returned manufactured in the fall, and those 'worked in' in the fall, are returned in the spring. The tanneries are located always on some stream furnishing sufficient power to propel the machinery, and in the midst of the hemlock forests, where bark is of easy access and cheap. As the forests of hemlock become extinguished, the tanners retreat further into the interior. Among other causes which have contributed to place the state of New York in the high position she occupies as a tanning state, was the enactment of judicious inspection laws, which, while they served to guard the purchasers from imposition, also stimulated the tanners to put forth their best skill and exertions to excel. The states of Maryland and Massachusetts have both adopted, with slight modifications, the laws of the state of New York in that particular, and are now experiencing their beneficial effects.

"Within the past fifteen years, important improvements have been made in the art of tanning, and many erroneous notions exploded. The quality of sole leather has been improved in about the same ratio as the average gain in weight has been increased, which may safely be estimated on an average at twenty per cent; that is to say, hides under the old system of tanning, which yielded a gain of 130 lbs. of leather for every 100 lbs. of *raw hide*, will now, under the improved system, be made to yield 150 lbs. The idea that time is necessary to make the best leather, has been demonstrated to be true only to a limited extent; as good leather can be made, by the bestowment of active management and labour, in six or eight months as in six or eight years; indeed, as good hemlock sole leather as we ever saw was manufactured in eight months, and we understand that successful experiments have been recently made establishing the fact, that excellent leather can be manufactured in fifty days; and extensive arrangements are now being made to test the feasibility of the plan on a large scale."

III.—COMPARATIVE Table of Foreign Hides, Imports and Exports, at Liverpool, and New York.

	Hides
Imported into Liverpool, 1824 to 1839, inclusive, 18 years	7,538,887
Exported from ditto, same period	2,067,773
Consumption at ditto, ditto	5,471,114
Imported into New York, ditto	7,707,118
Exported from ditto, ditto	586,819
Consumption at ditto, ditto	7,120,299

New York imported during the above period, 1,407,166 hides *more*, and exported 1,080,965 *less*, and consumed 2,406,685 more than the city of Liverpool. London imports and consumes less than Liverpool; and we know of no other city, New York excepted, that imports so largely as these two cities.

Hats.—Mr. Pitkin says, "The American manufacturer has long since supplied the domestic market with hats, and a surplus for exportation. In 1831, the value of hats made in this country was estimated at 10,500,000 dollars, exclusive of caps of various sorts; and the number of men and boys employed directly in this branch of domestic industry was estimated at 15,000, and of females, 3000; and the amount paid for their labour was calculated to be 4,200,000 dollars.

"The manufacture of caps, of various kinds, is carried on also to a great extent; an establishment of this description in Albany has employed, in this business, from 600 to 700 persons, and has paid wages to the amount of 100,000 dollars a year. And we beg leave here to refer to a branch of domestic industry, carried on principally in Massachusetts, in making braid, or straw-bonnets, and palm-leaf hats. The value of these articles, made in 1832, as appears by the returns made to the secretary of the treasury, was from 800,000 dollars to 900,000 dollars."

For the value made in 1840, see tabular statements hereafter.

Sugar Refineries.—In 1831, the number of sugar refineries in the United States was thirty-eight. For the present number and products, see tabular statements.

MANUFACTURES OF IRON AND OTHER METALS.

Under the head of "Metals of the United States," we have given details of the iron manufactures; and we are enabled to add some further information from various sources. It is remarkable that iron and iron wares were made in the United States, at a period when but little iron was made, except in Sussex, in England. Douglas, in his "Summary of the British Settlements," Vol. I., page 540, says: "Iron is a considerable article in our (New England) manufacture. It consists of three branches: 1, smelting-furnaces, reducing the ore into pigs, having coal (charcoal) enough, and appearances of rock ore. In Attleborough were erected, at a great charge, three furnaces, but the ore proving bad and scarce, this projection miscarried as to pigs, but were of use in casting of small cannon for ships and letters of marque, and in casting cannon-balls and bombs for the (final) reduction of Louisburg" in 1745 (100 years ago). 2. Refineries, which manufactured pigs imported from New York, Pennsylvania, and Maryland furnaces, into bar-iron. 3. Bloomeries, which, from bog or swamp ore, without any furnace, only by a forge hearth, reduce it into a bloom, or semi-liquified lump, to be beat into bars, but much inferior to those from pigs or refineries. 4. Swamp-ore furnaces; from ore smelted, they cast hollow ware, which we can afford cheaper than from England or from Holland."

Speaking of Pennsylvania, he says they export considerable quantity of their

iron in pigs, bars, and pots; and at Virginia and Maryland, "towards the mountain, there are furnaces for running of iron ore into pigs and Holland cast ware, and forges to refine pig-iron into bars."

The extraordinary progress of the iron works of England and Scotland, during the present century, has created such abundance and cheapness, that high duties have been resorted to in the United States for protecting domestic iron works. This evil policy we will refer to hereafter. Except common articles of hardware, all others are produced at high prices. Among the various metallic fabrics, according to the reports of the Commissioners of Patents, we may enumerate—

Jewellery.—"In 1820, it might be said with almost literal truth, that nothing of the kind was manufactured in the United States. But now, much the larger part of all the more rich and solid articles are made in this country. There are very good and extensive assortments in the stores, where not a single specimen of foreign jewellery is to be found. Articles of English manufacture are entirely superseded by the superior skill and taste of our workmen; but there are some sorts of work done by the French jewellers which cannot be equalled here."

Pins.—"The progress made in the United States, in the manufacture of this article of universal use, within a few years, is truly astonishing. A manufactory, near Derby, Connecticut, has a contrivance for sticking pins in paper, which is quite marvellous. It takes, in England, sixty females to stick in one day, by sunlight, ninety packs, consisting of 302,460 pins. The same operation is performed here, in the same time, by one woman. Her sole occupation is to pour them, a gallon at a time, into a hopper, from whence they come out all neatly arranged upon their several papers. The mechanism, by which the labour of

fifty-nine persons is daily saved, yet remains a mystery to all but the inventor; and no person, but the single woman who attends to it, is, upon any pretext whatever, allowed to enter the room where it operates."

Nails were first made in the United States by machinery, which slit the rods, cut, and head them with astonishing rapidity. They are more brittle than wrought nails; but machine-made spikes are said to be equal, if not superior, to others. Screws, door-hinges, horse-shoes, all kinds of tools, locks, and fastenings for doors, lead pipes, and various metallic articles, cotton and wool cards, are made of the best quality. (See tabular statement hereafter.) Steam-engines and boilers, mainbrace, and other instruments, and anchors, and chain cables; articles of cast iron; agricultural instruments; and all the articles of metal made in England and France, are now made in the United States; but many of them at much higher prices to the inhabitants than they could be imported from Europe.

Hooks and eyes form another illustration of the progress of inventive industry. Thirty years ago, the price was one dollar fifty cents per gross; now, the same quantity may be purchased, from fifteen to twenty cents. "At one establishment in New Britain, Connecticut, 80,000 to 100,000 pairs per day are made and plated by a galvanic battery, on the cold silver process. The value of this article, consumed annually in the United States, is estimated at 750,000 dollars."

Horse-shoes furnish a similar proof of the bearing of the progress of inventions. An improved kind of horse-shoes, made at Troy, New York, for some time past, is now sold at the price of only five cents per pound, ready prepared, to be used in shoeing the animal. At a factory, recently erected, fifty tons of these are now turned out per day; and, it is believed, they can be made and sent to Europe, at as good a profit as is derived from American clocks, which have handsomely remunerated the exporter.

<i>Brass, copper, tin, pewter and Britannia ware.</i> —In 1832, the man-	dollars.
factures of copper imported (exclusive of copper bottoms), was.....	33,244
Of brass (exclusive of sheet and rolled brass).....	370,764
Of tin.....	11,887
Of pewter.....	11,945
Total.....	427,840

In 1832, the value of the manufactures of copper, brass, tin, Britannia ware, including clasps made in Connecticut, was 430,050 dollars.

Buttons.—The value of domestic buttons, made in 1832, was estimated at 800,000 dollars; the value of those that were gilt, being 300,000 dollars; and others, 500,000 dollars. These were made in Waterbury and Meriden, in Connecticut, and in several towns in Massachusetts.

Combs, of ivory, horn, shell, and wood, were made in different parts of the United States, the same year, to the value, at least, of from 700,000 dollars to 800,000 dollars. In Massachusetts alone, in 1832, the value of combs of all kinds was about 450,000 dollars.

These articles, not only supply the home market, but constitute a part of

American domestic exports. The value of combs and buttons exported in 1832, was 124,305 dollars, and in 1833, 142,970 dollars.

Carriages.—The making of carriages and coaches, may very properly be classed among the important manufactures of the country. The annual value made, must be, in no small degree, conjectural.

Lead.—The lead mines in the United States, have been as productive as any in the world. Those on Fever river, and in Missouri, produced the following quantities, in each year, from 1823 to 1832.

YEARS.	Fever River.	Missouri.	TOTAL.	YEARS.	Fever River.	Missouri.	TOTAL.
1823	176	176	176	Brought forward	16,470,713	3,877,832	20,348,545
1824	335,130	335,130	1827	13,343,150	1,198,170	14,541,320
1825	173,779	173,779	1828	8,913,808	8,620	8,922,428
1826	173,330	866,500	1,039,830	1829	6,381,901	67,100	6,449,001
1827	938,812	1,371,567	2,310,379	1832	4,251,876	4,251,876
1828	1,181,184	910,360	2,091,544				
1829	11,195,810	1,288,970	12,484,780				
Carried forward	18,129,713	3,877,832	22,007,545	Total.....	50,753,677	5,131,723	55,885,400

The great increase in the years 1828 and 1829, reduced the price so low, as to render the working of the mines unprofitable.

American manufactures of white and red lead, as well as shot, now nearly supply the domestic market. In 1821, the quantity of white and red lead imported was about 4,000,000 lbs., valued at 322,568 dollars; and the quantity in pigs, bars, and sheets, was 3,197,409 lbs., and the quantity of shot was 2,290,596 lbs., both valued at 204,710 dollars. But since 1830, the value of white and red lead has averaged about 30,000 dollars a year; and, in 1833, the value of pig, bar, and sheet lead, was 60,650 dollars, and of shot, only 8500 dollars.

The value of white and red lead made in the country, must rest, in some measure, on conjecture. In 1810, the value, as returned by the marshals, was 325,560 dollars, principally from the city and county of Philadelphia.

The amount, at the present time (1834), cannot be less than 1,000,000 dollars. In 1833, two establishments for the manufacture of these articles existed in Salem, Massachusetts, and made the following quantities, viz.:—

	lbs.
White lead.....	2,081,894
Red ditto.....	42,236
Sugar of ditto.....	20,586
And which was valued at 195,000 dollars.	

Soap and Candles.—The American manufacturer has long since more than supplied the home market with the articles of soap and candles. The annual value of these articles exported, including spermaceti candles, is about 1,000,000 dollars. The amount necessary for home consumption, cannot be less, it is believed, than from 9,000,000 to 12,000,000 dollars. Estimating the number of families in the United States, at 2,330,000, and allowing four and a half dollars to each family for these articles, the value will be about 10,500,000 dollars.

The quantity of spermaceti candles, made in the United States, in 1831, was about 2,730,000 lbs., worth 709,800 dollars; and the annual value of this kind of candles exported, is about 250,000 dollars, leaving for home consumption to the amount of 460,000 dollars.

Paper.—Paper was made in New England, and probably in other parts of North America, a little more than a century ago.

In September, 1728, an act was passed, by the assembly of the province of Massachusetts bay, for the encouragement of the manufacture of this article. This act was granted to Daniel Henchman and others, the right of making paper, on condition, that, within the first fifteen months, they would make 140 reams of brown paper, and sixty reams of printing paper. This small beginning is referred to, in the report of the Board of Trade before mentioned, made in 1731; in which, speaking of the manufactures of Massachusetts, the board say, "By a paper mill, set up three years ago, they make to the value of 200*l.* sterling."

The manufacture of paper, particularly of the coarser kind, no doubt, increased, and was carried on, to a considerable extent, before the revolution. It was mentioned by Hamilton, in 1791, as one of the manufactures, which, in no inconsiderable degree, supplied the domestic market; and Coxe, in his view of the United States, published not long after the date of this report, states, that there were then forty-eight paper mills in operation in Pennsylvania.

In 1810, the value of paper made in the country, was about 2,000,000 dollars; and there can be little doubt, that it has trebled in value since that period, and must be now from 5,000,000 to 6,000,000 dollars. The value of paper made in Connecticut, in 1832, was 546,000 dollars.

The general government has, from its commencement, imposed a protecting duty on imported paper, and admitted the raw material, of which it is made, duty free. The value of rags imported, in 1832, was 466,387 dollars, and in 1833, 411,785 dollars, principally from Italy and Trieste.

Cabinet Ware.—The value of cabinet ware was estimated, in 1831, at 10,000,000 dollars; employing 15,000 men, who received for their labour about 4,700,000 dollars. The value of household furniture, exported in 1832, was 169,038 dollars; and, in 1833, was 200,635 dollars. (For 1810, see tabular statements.)

Connecticut Clock Commerce.—It is estimated that the citizens of Connecticut manufacture clocks to the amount of 1,000,000 dollars per annum. A correspondent of the *Rochester Democrat* residing at Hartford, says:—

"For the last three years we have been gradually pushing our *notes of time* into foreign countries; and such has been our success, that within a few hours' ride of this city, 1000 clocks are finished daily; and it is a fair estimate to put down 500,000 clocks as being manufactured in this state last year. This year the number will be still increased, as John Bull is so slow in his movements that there is no hope of reform until he has plenty of Yankee monitors. These we are now sending him by every ship that clears from our seaports. In 1841, a few clocks were exported there as an experiment. They were seized by the custom-house in Liverpool, on the ground that they were undervalued. The

invoice price is one dollar and fifty cents, and the duties twenty per cent. They, however, were soon released, the owner having accompanied them and satisfied the authorities that they could be made at a profit, even thus low. Mr. Sperry, of the firm of Sperry and Shaw, was the gentleman who took out the article. He lost no time, after getting possession of his clocks, in finding an auction house. They were made of brass works, cut by machinery out of brass plates, and a neat mahogany case enclosed the time-piece. They were a fair eight-day clock, but wholly unknown in England. The first invoice sold for 4*l.* sterling to 5*l.* sterling, or about twenty dollars each. Since that time every packet carries out an invoice of the article, and 40,000 clocks have been sold there by this one firm, Sperry and Shaw. Others are now in the business, and the north of Europe has become our customers. India, too, is looked to as a mart for these wares, several lots have been forwarded to the ports of China."

Glass.—The report of the committee of the New York Convention, informs us, that the manufacture of flint glass, is now almost equal to the domestic consumption; "that, for the manufacture of this article, there were, in 1831, twenty-one furnaces, containing 140 pots, and located at the following places:—

At Boston and its vicinity	6 furnaces, with 38 pots.
.. Providence, Rhode Island	2 12 ..
.. New York and its vicinity	3 22 ..
.. Philadelphia	1 6 ..
.. Baltimore	2 12 ..
.. Pittsburg	4 32 ..
.. Well-burg	2 12 ..
.. Wheeling	1 6 ..

"That the value of flint glass made in these establishments, was about 1,300,000 dollars; and that two of these, having four furnaces, with twenty-eight pots, situated in the vicinity of Boston, made annually, to the amount of 400,000 dollars, having a capital of 450,000 dollars, and paying, in yearly wages, 140,000 dollars.

"American flint glass is of an excellent quality, rivalling, in solidity and elegance, that of foreign countries. The first manufactory of flint glass in the United States, was established at Pittsburg, in 1812, and here the manufacture of this article has since greatly extended: and we have rarely felt more pleasure or surprise than in witnessing the making of this article, in a place which, but a few years before, was in the midst of a wilderness. In 1832, domestic glass, principally flint glass, was exported to the amount of 106,855 dollars.

"Nor, during the period under review, have the Americans been less successful in the manufacture of window glass, and glass bottles of different kinds. The New England crown glass manufactory, situated in Boston, having a capital of 150,000 dollars, makes glass of this description, to the value of 100,000 dollars a year. In addition to this, the committee advise us of, at least, twenty-three manufactories of cylinder window glass then in this country, ten in Pennsylvania (four being at Pittsburg and four at Brownville), two at Wheeling in Virginia, two in Maryland, two in New York, two in Ohio, one in Massachusetts, one in New Hampshire, one in Vermont, one in Connecticut, and one in the district of Columbia. These had a capital of 690,000 dollars, employed 800 men, whose wages were 230,000 dollars, and made annually 172,500 boxes of glass, or 8,625,000 feet, valued at 531,000 dollars.

"The most extensive manufactory of green bottles, demijohns, apothecaries' ware, and shop furniture, is that of Dyott, near Philadelphia: employing from 253 to 300 men and boys, and melting about 1200 tons per annum. Near Boston is a manufactory of glass bottles, having a capital of 50,000 dollars, making annually 6000 gross, and employing sixty-five men and boys."

By the report of this committee, the whole value of glass made in the United States, was as follows:—

	dollars.
Flint glass	1,300,000
Crown window glass	150,000
Cylinder window glass	851,000
Glass bottles, phials, apothecaries' ware, demijohns, carboys, &c.	200,000
	2,501,000
Employing 1800 men, whose wages amount to	600,000

From additional information obtained, subsequent to the date of the report, it was supposed that the value of the domestic manufacture of glass, was 3,000,000 dollars. In December, 1834, the number of glass works in Pittsburg had increased to ten.

In the manufacture of glass, as well as in its subsequent working, important improvements have been made. "The colouring of glass, and the production of works in painted glass, have advanced to a high state of perfection. The popular error of considering the ancient art of glass painting to be completely lost, has been exploded. The truth is, that this art at the present day exhibits a higher condition of improvement than at any former period, although the contrary opinion generally prevails. It has been found by careful experiment, that, when the metals themselves, instead of their oxides, have been fused with glass, it presents that dull, untransparent appearance, which is remarkably characteristic of ancient stained glass, and, by repeated analytical and synthetic trials, the composition of ancient glass has been fully determined. The investigation of this subject has proceeded so far, that nearly all the colours used by the artist of the middle ages for painting on glass have been determined with accuracy.

"A most interesting application of glass has been made within two or three years, in the formation of ornamental damasks, by weaving glass threads with silk. They are richer in appearance, and cost less, than the gold or silver damasks. Such improvements have been made in the process of annealing the glass, that the threads are rendered almost as pliable as silk itself.

"In the manufacture of glass a plan has recently been adopted by which it is freed from air bubbles—a consideration of great consequence in the preparation of glass for optical purposes. A vacuum is created over the melted glass, causing the air bubbles to expand and rise more readily to the surface.

" Among the trophies of the art of glass making, may be instanced here the enormous sheet of plate glass lately cast by the Thames Plate Glass Company. Its dimensions are fourteen feet eight inches in length, and eight and a half feet in width. An ingenious process for making concave glass mirrors was not long since introduced, though it involves practical objections to its common use. A large thin, and uniform glass mirror was firmly cemented to an iron rim, and, by means of an air-pump, a vacuum was created under the plate of glass, and the pressure of the atmosphere produced a concavity of the glass in proportion to the exhaustion beneath. The curve of the mirror obtained in this way cannot be very deep, and forms what is termed the catenary curve."

Glass works at Sandwich, Massachusetts.—The yards and buildings of this establishment cover six acres of ground. It employs 225 workmen, who, with their families, occupy sixty dwelling-houses. The raw materials used, per annum, are, glass, 600 tons; red lead, 700,000 lbs.; pearlash, 450,000 lbs.; saltpetre, 70,000 lbs. They consume 1100 cords of pine wood, 700 cords of oak wood, and 100,000 bushels of bituminous coal. Seventy tons of hay and straw are used for packing the glass. The amount of glass-ware manufactured, is 300,000 dollars per annum; said to be superior to any other manufactured in America, and equal to any in Europe. By the application of heated air from the steam-engine, to pans containing sea water, they manufacture about 3000 bushels of salt per annum; and all the ashes are leached, and the ley converted to potash. It is said that the saving by this economy, which is carried through every department, is sufficient to pay a handsome dividend on the stock.—(See Glass-works, &c. for 1840—tables.)

QUANTITY and Value of Manufactured Glass Imported into the United States, in each Year, from 1825 to 1840.

* During 1843 and 1844, the following quantities of glass were also entered under the denomination of cut and plain, paying specific rates of duty. Prior to 1843, they were all included under *Glassware at ad valorem duties.*

In 1843. Cut glass, 18,102 lbs., value, 7,000 dollars.—Pl in glass, 39,468 lbs., value, 6319 dollars.

In 1844

* Per square foot.

Distilled spirits.—In 1810, the quantity distilled was about 25,000,000 of gallons, 5,000,000 from molasses, and the remainder from grain or fruit; and the whole was then valued at 14,988,776 dollars, being more than one-tenth of all the manufactures of the United States, and between one third and a half of the manufactures of wool, cotton, and flax, at that time.—[For Distilleries and Breweries in 1840, see tables.]

Chemical produce.—A report by a committee of the New York Convention, states, “that in 1831, there were not less than thirty chemical establishments in this country, having a capital of 1,158,000 dollars, and making various chemical articles, to the annual value of 1,000,000 dollars, and employing 900 hands. This kind of manufacture was secured principally by the tariff of 1824. The committee state, that the general price of chemical articles, in the United States, was, at that time, one-half less than before their domestic manufacture, under the tariff of 1824; and, in some instances, the difference was much greater—that in 1820, the price of Epsom salts was from eleven to twelve cents per pound—in 1824 a duty of four cents was imposed on foreign salts of this description; and the price in 1831, was three and a half cents per pound.”

“American chrome yellow was, for a short time, exported to Great Britain, not being embraced in the tariff of British duties.

“The British manufacturer of this article, however, soon procured a duty upon its importation, amounting to a prohibition. About 4,000,000 lbs. of copperas is now made in the United States; 3,000,000 lbs. in Vermont, 500,000 lbs. in Ohio, and 500,000 lbs. in other states. This article is sufficient for the supply of this country, and in 1832 was sold at two, and two and a half cents per pound.

“Among the articles made in these various chemical establishments, are calomel and other mercurial preparations, Glauber salts, Rochelle salts, tartar emetic, ammonia, sulphate of quinine, oil of vitriol, tartaric acid, aqua fortis, prussian blue, chrome yellow, chrome green, nitric acid, muriatic acid, barilla, oxalic acid, chloride of lime, chlorine of soda, refined saltpetre, refined borax, refined camphor, acetic acid, acetate of lead, nitrate of lead, prussiate of potash, bi-chromate of potash, &c.

“Most of the materials used in these establishments, are the produce of the United States; and nearly the whole of this branch of domestic industry, is a clear gain to the United States.”—*Pitkin*, in 1835. (See tabular statements for 1840.)

Salt manufacture of the United States.—The annual report of the superintendent of salt springs and inspector of salt in the county of Onondaga, the salt region of New York, for 1843, prepared and published in pursuance of the requirement of a law of the state, furnishes much valuable information touching the manufacture and trade in this important article of consumption and commerce. Taking this report and a variety of other data as the basis, we proceed to lay before our

readers, in as condensed and comprehensive form as possible, some account of the progress of the salt trade and manufacture of the United States.

The quantity of salt manufactured in the United States in 1840 added to the quantity imported in that year, would make an aggregate of 14,302,337 bushels, which would give to each man, woman, and child in the union a proportion of near seven-eighths of a bushel of salt.* The following table† exhibits the aggregate amount of salt manufactured in 1839, in each state and territory of the United States. It shows how widely this mineral, so necessary for man, is diffused throughout the country.

STATEMENT of the aggregate Amount of Salt manufactured in the year 1839, in each State of the United States.

NAME OF STATE.	Quantity	NAME OF STATE	Quantity.
	bushels.		bushels.
Maine.....	50,000	Brought forward.....	3,302,136
New Hampshire.....	1,200	North Carolina.....	1,483

Maryland.....	1,200	Arkansas.....	8,700
Virginia.....	1,743,818	Florida.....	12,000
Carried forward.....	5,355,136	Total.....	6,176,174

The amount of duty on salt, imported in 1840, and secured to be paid to the United States that year, was 917,362 dollars, less than four cents to each inhabitant. About four-fifths of the foreign salt imported into New York in 1841, was Turk's Island.

The following table exhibits the quantity of salt imported into the United States from foreign countries during a period of ten years, from 1832 to 1841, inclusive, and also the rate of duties, as follows:—

IMPORTS and Rate of Duties.

YEARS.	Quantity.	Rate of duty.		YEARS.	Quantity.	Rate of duty.	
	bushels.*	cents.	mills.		bushels.	cents.	mills.

Carried forward.....	50,908	19,253	Not entitled to drawback.....	13,801	5,501

During the same year (1841), the whole amount of domestic salt exported, was as follows:—

EXPORTED TO	Quantity.	Value.	EXPORTED TO	Quantity.	Value.
	bushels.	dollars.		bushels.	dollars.
Dutch East Indies.....	50	43	Brought forward.....	213,894	62,273
Dutch West Indies.....	317	111	Cuba.....	1,940	413
British American colonies.....	213,527	62,121	Texas.....	150	75
Carried forward.....	213,894	62,273	Total.....	213,994	62,765

The salt springs of New York, and her facilities for manufacturing salt and transporting it to market, are superior to any in the United States. These springs are located on the Erie and the Oswego canals, and in the vicinity of the Seneca and the Oneida lakes, the borders of which will furnish wood for fuel for a great number of years; and when this is exhausted, supplies of bituminous coal can be obtained at a low rate, from the mines at Blossburg, Pennsylvania. For a market, New York has the great lakes Ontario, Erie, Huron, and Michigan, with which it is connected by means of the Erie and the Oswego canals.

The salt springs around the Onondaga lake, were known to the aboriginal inhabitants, who communicated their knowledge to the white settlers.

If there are mines of rock salt, they lie at great depth. Borings have been made at Onondaga, at several points; in one instance, to the depth of 250 feet, without finding fossil salt, and without passing through the saliferous rock, much of the difference being in cemented gravel. But the very important fact was elicited, that the strength of the brine increased with the depth of the well.*

The salt springs next in importance to those of New York, in the United States, are those at Kenawha, Virginia. According to the last census, the quantity of salt manufactured at these salines is 1,600,000 bushels. They have the advantage of the Onondaga springs in the article of fuel, there being an abundance of mineral coal contiguous to the springs, the cost of which, delivered at the salt works, does not exceed one dollar per ton; but their brine is much weaker, as may be seen by the table taken from the report of Dr. Beck, for 1837, which exhibits the relative strength of the different brines from which salt is manufactured in the United States, as follows:—

At Nantucket	350	gallons of sea-water give a bushel of salt.
„ Boon's Lick (Missouri)	450	„ brine „
„ Conemaugh (Pennsylvania) . .	300	„ „ „
„ Shawneetown (Illinois)	280	„ „ „
„ Jackson (Ohio)	213	„ „ „
„ Lockhart's (Mississippi)	180	„ „ „
„ Shawneetown (2d saline)	123	„ „ „
„ St. Catharine's (Up. Canada) . .	120	„ „ „
„ Zanesville (Ohio)	95	„ „ „
„ Kenawha (Virginia)	75	„ „ „
„ Grand River (Arkansas)	80	„ „ „
„ Illinois River	80	„ „ „
„ Muskingum (Ohio)	50	„ „ „
„ Onondaga (New York)	41 to 45	„ „ „

Since the above table was published, stronger brine has been obtained at the Onondaga salines. There is an abundant supply, from thirty to thirty-three gallons of which yield a bushel of salt.

The strong brine springs near Abington are at Saltville, Washington county, Virginia. Washington county borders on East Tennessee and North Carolina. The springs are located between the Clinch mountain and Blue Ridge. While engaged in boring for these springs, in 1840, salt rock was discovered at the depth of 220 feet below the surface of the ground. This salt rock was penetrated by boring 166 feet without being passed through. It yields a large proportion of chloride of sodium. Specimens of the rock are deposited in the State Geological Cabinet, at Albany.

A correspondent of the superintendent of salt springs, at Onondaga, has recently furnished an analysis of this rock, and also of the brine of the springs, by Professor Hayben, geologist, &c., as follows, viz.:—

* *Gordon's Gazetteer of New York*, 1836.

ANALYSIS of Salt Rock.

Oxide of iron.....	0.179
Sulphate of lime.....	0.146
Chloride of calcium.....	trace
Chloride of sodium.....	99.684
	100.000

"One pint of brine yielded, in saline matter, 2432.25 grains, equal in a gallon to 19,458 grains, or 2.77 lbs. avoirdupois. Eighteen gallons of the brine produce a bushel of salt of fifty lbs."

Some improvements have also been made in the springs at Shawneetown, Illinois. They now furnish brine, 100 gallons of which yield a bushel of salt.

Within the past two years, a salt spring has also been discovered in a rock, boring 661 feet deep, upon Grand River, at Grand Rapids, Michigan, about forty miles from Lake Michigan. A copper tube, of three inches diameter, was inserted in the boring to the depth of 360 feet, for the purpose of excluding a weaker vein of water nearer the surface. The brine raised in this tube to the height of thirty-five feet above the surface of the ground, and flowed over at the rate of seven gallons per minute. It requires about seventy gallons of the brine to yield a bushel of salt. The manufacture of salt, upon a small scale, has been commenced at this place by the proprietors of the spring, Messrs. Lucius, Lyon, and Co.

The manufacture of salt at Onondaga springs has increased rapidly, producing, from the duty paid to the state, a very large revenue. The following statement exhibits the quantity of salt manufactured in each year, from 1826 to 1842, inclusive, and the amount of duties paid into the treasury of the state:—

YEARS.	Salt manu- factured.	Amount of duties collected.	YEARS.	Salt manu- factured.	Amount of duties collected.
	bushels.	dlrs. cts.		bushels.	dlrs. cts.
1826.....	827,504	103,434 30	Brought forward..	11,617,451	1,054,407 37
1827.....	983,410	122,589 25	1835.....	1,209,867	132,502 02
1828.....	1,166,888	145,111 00	1836.....	1,912,836	114,771 48
1829.....	1,291,280	161,410 00	1837.....	1,161,787	129,677 72
1830.....	1,415,146	179,430 75	1838.....	1,375,072	151,561 92
1831.....	1,514,037	189,754 38	1839.....	2,864,718	171,883 08
1832.....	1,652,985	201,640 82	1840.....	2,672,805	157,338 50
1833.....	1,838,646	229,380 75	1841.....	3,310,769	209,446 14
1834.....	1,913,252	116,295 13	1842.....	1,791,903	137,514 18
Carried forward..	12,647,452	1,154,407 37	Total.....	31,628,191	2,653,131 71

Previous to 1834, the rate of duty was one shilling per bushel, since which it has been six cents. This charge accounts for the diminished revenue in 1834 and 1835, upon the increased product.

By a statement contained in the report of the superintendent and inspector for 1838, we perceive that the *net* revenue from salt duties, from 1818 to 1824, inclusive, were as follows:—

YEARS.	Value.	YEARS.	Value.
	dls. cts.		dls. cts.
1818.....	36,336 62	Brought forward.....	224,396 84
1819.....	62,520 10	1821.....	38,834 74
1820.....	67,703 12	1822.....	73,807 89
1821.....	57,348 00	1823.....	83,553 92
Carried forward.....	224,396 84	Total.....	432,593 39

dols. cts.

The whole amount of duties refunded in 1842, in conformity to a resolution of the Commissioners of the Canal Fund, allowing a drawback of duty on salt arriving at certain points specified in the said resolution, is 14,533 83

Total amount of duties refunded in 1841 6,075 87

Increase in amount, paid in 1842, of drawback of duties 8,477 96

This last item shows that an increased amount of salt manufactured at the springs during the past year, has been disposed of at the more distant markets.

The total amount of expenditures for all purposes during the year 1841, are 53,984 89

Total expenditures in 1842 42,619 96

Expenditures of 1842 less than those of 1841, by the sum of 11,364 93

QUANTITY and quality of Salt inspected in each Village, during 1842:—

In the village of Salina.—Coarse salt, 1288 bushels, twenty-two lbs.; fine salt, 845,022 bushels, two lbs.; dairy salt, 3961 bushels, forty-two lbs. Aggregate—850,272 bushels, ten lbs.

In the village of Syracuse.—Coarse salt, 149,724 bushels, eighteen lbs.; fine salt, 486,439 bushels, thirty-four lbs.; dairy salt, 18,828 bushels, twenty-two lbs. Aggregate—654,992 bushels, eighteen lbs.

In the village of Geddes.—Coarse salt, 12,009 bushels, forty-six lbs.; fine salt, 154,532 bushels, eighteen lbs.; dairy salt, 2433 bushels, two lbs. Aggregate—168,975 bushels, ten lbs.

In the village of Liverpool.—Fine salt, 615,194 bushels, forty-six lbs.; dairy salt, 2468 bushels, ten lbs. Aggregate—617,663 bushels.

TABLE showing the Number and Extent of the Manufactories employed in the manufacture of Coarse and Fine Salt, in the town of Salina, the 1st of January, 1842.

1835.....	2,200,567	256,615			

The annual consumption of salt in the United States is about 14,000,000 bushels. In the year 1841, there were 6,179,174 bushels of salt imported into the United States, of which 1,522,333 bushels were entered at the port of New York; and during eleven months of 1842, ending 30th of November last, 1,661,495 bushels of foreign salt were entered at the same port.

The whole quantity of domestic salt exported in 1841 was only 215,084 bushels, of which quantity 213,527 bushels were sent to the British colonies of Canada, where it was subjected to a duty of ten cents per bushel of fifty-six lbs.; and, in the year 1842, American salt entering the Canada ports paid a duty of twelve cents per bushel.

* From 1834 to 1843, the duty was declining under the operation of the Compromise Act. The amount of duty must depend upon the price. The above is only an estimate of the duty, though probably not far from the truth.

Various other manufactures have been established, and are now being established in this country: among these, we may enumerate looking-glasses, the printing and binding of books, umbrellas, brushes of all kinds, brass nails, stockings, gloves, wafers, webbing, lace and fringes, mathematical and musical instruments, silk, whips, pocket-books, ready-made clothing, earthenware, oil, powder, beer, ale and porter, wire, brick, types, glue, clocks, printing-presses, lamps, spectacles, coffee-mills, suspenders, wool and cotton cards, oil cloths,

bellows, printers' ink, India rubber, and many others, which have not come to our notice.

Manufactures of the South and West.—"It is probable that if the manufacturing business is found sufficiently profitable for a series of years in this country, the upper parts of the Mississippi Valley will, in no long time, be the chief seat of American manufactures. Already labour and capital, to a large amount, are employed in manufactures of various sorts in the west. In western Pennsylvania, the upper part of western Virginia, and in the eastern part of Ohio, manufactories of cotton, wool, silk, paper, wooden and stone ware, &c., &c., abound."

The Greensborough *Patriot* gives an account of eight manufactories, one, the Mount Hecla, in that town, and the others in the neighbourhood; viz., the High Falls and Alamance factories, in Orange; the Cedar Falls and Franklinsville factories, in Randolph; the Lexington, in Davidson; the Salem, in Stokes; and the Leaksville, in Rockingham. That called Mount Hecla was among the first put in operation in the southern country. The Lexington and Salem factories are worked by steam. The products of these mills, besides supplying an extensive country demand, are sent off in immense quantities to the northern and western markets.

In Fayetteville and the immediate vicinity, the *Observer* enumerates six factories; viz., Mallett's, Cross Creek, Phoenix, Rockfish, Beaver Creek, and Little River.

Besides these, there are, in other parts of the state, one at Salisbury; one at Rockingham; one at Lincolnton; one at Rocky Mount, Edgecombe; one at Cane Creek, Chatham; one at Concord, Cabarrus; one at Milton; one at Mocksville; one at Milledgeville, Montgomery county; one in Surrey county; and one other in Orange county; making twenty-five in all.

The capital invested in the twenty-five is estimated, by the *Observer*, at about 1,050,000 dollars; the number of spindles about 50,000; persons employed from 1200 to 1500, and number of bales of cotton consumed at not less than 15,000.

The foregoing statements are all prepared from the official returns to Congress; from Pitkin's statistics; from the reports of commerce; from Mr. Ellsworth's reports for 1840, 1841, 1842, 1843, and 1844; and from statistical articles in *Hunt's Merchants' Magazine*.

TABULAR Statement of the Manufactures of the United States, in 1840.

RECAPITULATION OF THE FOREGOING RETURNS OF MANUFACTURES.

Machinery—Value of machines manufactured.....	1,098,541	Glass, earthenware, &c.—Number of men employed.....	3,236
— Number of men employed.....	13,001	— Value of manufactured articles, including looking-glasses.....	2,800,293
Hardware, cutlery, &c.—Value manufactured.....	6,431,867	— Capital invested.....	2,084,100
— Number of men employed.....	5,692	— Number of potteries.....	659
Cannon and small arms—Number of cannon made.....	274	— Value of manufactured articles.....	1,104,225
— Ditto of small arms.....	88,053	— Number of men employed.....	1,612
— Ditto of men employed.....	1,741	— Capital invested.....	331,421
Precious metals—Value manufactured.....	4,734,560	Sugar refineries, chocolate, &c.—Number of sugar refineries.....	43
— Number of men employed.....	1,356	— Value of produce.....	3,250,700
Various metals—Value manufactured.....	9,379,411	— Ditto of chocolate manufactured.....	79,960
— Number of men employed.....	6,677	— Ditto of confectionery made.....	1,143,983
Granite, marble, &c.—Value manufactured.....	2,442,950	— Number of men employed.....	1,155
— Number of men employed.....	3,734	— Capital invested.....	1,760,571
Bricks and lime—Value manufactured.....	9,754,945	Paper—Number of paper manufactures.....	426
— Number of men employed.....	22,407	— Value of produce.....	5,641,495
Capital invested in the preceding manufactures.....	20,620,800	— Ditto of all other manufactures of paper, playing cards, &c.....	511,297
Wool—Number of fulling mills.....	2,365	— Number of men employed.....	4,796
— Ditto of woollen manufactories.....	1,420	— Capital invested.....	4,745,230
— Value of manufactured goods.....	20,026,929	Printing and binding—Number of printing offices.....	1,532
— Number of persons employed.....	21,314	— Ditto of laundries.....	417
Capital invested.....	15,765,111	— Ditto of daily newspapers.....	134
Cotton—Number of cotton manufactories.....	1,740	— Ditto of weekly newspapers.....	1,111
— Ditto of spindles.....	2,284,631	— Ditto of semi and tri-weekly newspapers.....	125
— Ditto of spinning and printing establishments.....	129	— Ditto of periodicals.....	227
— Value of manufactured articles.....	16,350,453	— Men employed.....	11,322
— Number of persons employed.....	72,119	— Capital invested.....	5,873,845
— Capital invested.....	51,102,359	Cordage—Number of rope walks.....	308
Silk—Number of pounds reeled, thrown, or other silk made.....	15,745	— Value of produce.....	4,074,200
— Value of the same.....	119,514	— Number of men employed.....	4,464
— Number of males employed.....	216	— Capital invested.....	2,465,577
— Ditto of females and children.....	521	Musical instruments—Value produced.....	925,594
— Capital invested.....	274,374	— Number of men employed.....	504
Flax—Value of manufactures of flax.....	342,295	— Capital invested.....	734,370
— Number of persons employed.....	1,626	Carriages and waggons—Value produced.....	10,497,847
— Capital invested.....	208,087	— Number of men employed.....	21,594
Mixed manufactures—Value of produce.....	6,545,503	— Capital invested.....	5,351,432
— Number of persons employed.....	15,605	Mills—Number of flouring mills.....	4,364
— Capital invested.....	4,264,991	— Ditto of barrels of flour manufactured.....	7,404,262
Tobacco—Value of manufactured articles.....	5,819,584	— Ditto of grist mills.....	23,601
— Number of persons employed.....	8,464	— Ditto of saw mills.....	31,650
— Capital invested.....	3,437,191	— Ditto of oil mills.....	843
Hats, caps, bonnets, &c.—Value of hats and caps manufactured.....	4,704,312	— Value of manufactures.....	76,543,246
— Ditto of straw bonnets manufactured.....	1,476,503	— Number of men employed.....	60,748
— Number of persons employed.....	20,176	— Capital invested.....	65,438,740
— Capital invested.....	4,465,300	Ships—Value of ships and vessels built.....	7,016,094
Leather, tanneries, saddleries, &c.—Number of tanneries.....	8,720	Furniture—Value of furniture made.....	7,555,405
— Sides of sole leather tanned.....	3,463,611	— Number of men employed.....	18,003
— Ditto of upper ditto, ditto.....	3,781,494	— Capital invested.....	6,989,971
— Number of men employed.....	26,018	Houses—No. of brick and stone houses built.....	8,429
— Capital invested.....	15,650,729	— Ditto of wooden houses built.....	45,684
— All other manufactures of leather, saddleries, &c.....	17,134	— Men employed.....	85,501
— Value of manufactured articles.....	33,134,463	— Value of constructing or building.....	41,517,101
— Capital invested.....	12,881,262	All other manufactures not enumerated—Value.....	31,785,333
Soap and candles—Number of pounds of soap.....	49,420,427	— Capital invested.....	23,019,726
— Ditto ditto of tallow candles.....	17,004,507	Total capital invested in manufactures.....	267,736,579
— Ditto ditto of spermaceti and wax ditto.....	2,936,951	In iron business.....	20,432,121
— Ditto of men employed.....	5,641	In lead ditto.....	1,346,796
— Capital invested.....	2,757,373	In gold ditto.....	234,325
Distilled and fermented liquors—Number of distilleries.....	10,306	In other metals.....	228,900
— Ditto of gallons produced.....	41,402,627	Coal business—Anthracite.....	4,335,602
— Ditto of breweries.....	406	— Bituminous.....	1,468,662
— Ditto of gallons produced.....	23,267,730	Salt.....	6,211,464
— Ditto of men employed.....	17,723	Granite, marble, and stone.....	6,898,015
— Capital invested.....	5,147,508	Nurseries.....	2,540,150
Powder mills—Number of powder mills.....	317	— Capital invested.....	2,945,774
— Number of pounds of gunpowder.....	8,077,319	Commercial and commission houses.....	119,793,267
— Ditto of men employed.....	496	Retail dry-goods and grocery, &c.....	258,301,799
— Capital invested.....	875,875	Lumber yards and trade.....	9,844,207
Drugs, medicines, paints, and dyes—Value of medicinal drugs, paints, &c.....	4,151,899	Butchers, packers, &c.....	11,376,550
— Ditto of turpentine and varnish produced.....	660,377	Fleaberies.....	16,422,020
— Number of men employed.....	1,848	Various manufactures.....	70,628,469
— Capital invested.....	4,507,575	Woollen ditto.....	15,765,121
Glass, earthenware, &c.—Number of glass houses.....	81	Cotton ditto.....	51,102,359
— Number of cutting establishments.....	34	Silk ditto.....	274,374
		Flax ditto.....	204,087
		Mixed ditto.....	4,308,591
		Tobacco ditto.....	3,437,191
		Hats, caps, and bonnets.....	4,465,300
		Leather tanneries.....	15,650,720

(continued)

Leather—manufactured and saddles . . . dls.	12,881,261	Cordage dls.	2,665,577
Soap and candles do.	2,737,373	Making musical instruments do.	731,170
Distilleries and breweries do.	9,447,368	— carriages and wagons do.	5,331,632
Powder mills do.	875,875	Mills do.	15,838,470
Drugs, medicines, paints, and dyes . . . do.	4,567,675	Making furniture do.	6,889,971
Glass do.	2,084,100	All other manufactures do.	23,919,726
Earthenware, &c. do.	331,431	Total capital invested in	
Sugar refineries, and chocolate do.	1,769,571	manufactures dls.	267,720,579
Paper making do.	4,748,239	Total capital invested do.	715,089,250
Printing and binding do.	5,723,815		

The capital employed in agriculture is not given; nor is it in some other branches. The table must, therefore, be considered as incomplete, and as only an approximation to the true amount of active capital employed.

One principal cause of the growth of American Manufactures, is the difficulty which the citizens of the United States of America experience in paying for those of the United Kingdom; arising from our non-admission of American corn, except at exorbitant duties, unless during periods of extreme scarcity in England. The Americans are now exulting over the fallacy of British legislation, in regard to corn and food, and they extol the increase of their own manufactures.

In the *New York Express*, April, 1845, we find the following remarks on the progress of manufactures in America:—

"The manufacturing interest of this country, at the present time, is extending itself faster than at any period since we have begun to manufacture for ourselves. From Maine to the extreme west and south-west, every spindle and loom is at work—many of the mills with orders for their works for months a-head. Water is no longer the sole motive power of factories, and, in the most favoured localities at the east, for manufactures this power has long been exhausted, and the never-failing power of steam has been resorted to. In Newburyport and Boston, factories of this class are now in course of erection, and even Lowell has now more factories building which are to be propelled by steam than by water. At no time have there been more new mills building, or the old ones more active than at present; four new mills, of the largest size, are to be erected this summer, and large additions made to the old ones—in all, not less than 25,000 looms. At the new 'city of looms,' on the Merrimack, at Haverhill, active preparations are making to commence their dam, which, when completed, will furnish a water-power that will not be exhausted in half a century of prosperous manufacturing. In New Hampshire and Maine, there is the same tendency to invest capital in manufacturing; cotton mills are the favoured stocks, but other articles are not forgotten or neglected. In Maine, charters have been granted for thirteen cotton and woollen mills, and two iron factories; the old companies have also added largely to their capital stocks; and at no time has Maine been so decidedly in favour of manufacturing as at present. At Buffalo, there has been a large mill started, with every prospect of success. At St. Louis, and numerous other points in the west, in Mississippi and Georgia, new mills are erecting. At Baltimore and Georgetown, several flour mills have been altered to cotton mills; and all through the country there is seen a general wish to make investments in this way."

CHAPTER XIV.

INTERNAL NAVIGATION OF THE UNITED STATES.

THERE is no part of the world so extensively favoured by nature with the facilities and power of internal intercourse, as the vast empire comprised within the United States of America. The rivers which descend into the Atlantic,—even those of the New England States, although their navigable courses from the mountains to the sea be comparatively limited, are all important as channels for the transport of commodities. The state of Maine has, by its inlets and rivers, abundant water communication, and requires but little aid from artificial construction. Where most wanted, canals and railroads have been opened or projected (for which, and the rivers of the state, see Maine). New Hampshire has several rivers, the navigation of which, where interrupted, has, in several parts, been improved by artificial means. Vermont has Lake Champlain, and numerous navigable streams. Massachusetts, Rhode Island, and Connecticut, have extended the means of internal transport by canals and railroads, which communicate between the principal seaport towns and the navigable termination of inland rivers. Railroads open a rapid intercourse direct from the Atlantic, at Boston, to the Hudson, at Albany. The Hudson, that great artery of trade and intercourse within the state of New York, opens extensive and convenient channels of transport to and from the interior,—to and from Lakes Champlain, Ontario, and Erie, with which the Hudson is in communication, by canals and railways; and, by all these, an internal navigation is opened from the Atlantic and the St. Lawrence to the waters and regions of the FAR WEST. Railroads and canals traverse the Jerseys, to Delaware bay and river. The Susquehanna,—the Ohio,—that great inlet, Chesapeake bay,—the Potomac, and numerous other streams, and canals, and railroads, extend navigation and the means of intercourse over the greater part of Pennsylvania, Delaware, and Virginia. When the projected and unfinished canals and railways are completed, the means of internal transport will be extended to all important points of these states.

The rivers and inlets of the Carolinas, Georgia, and Florida, are nearly all on a scale of minor extent, or rather depth;—but they are important in affording facilities, improved by the railways and canals which have been constructed, in bringing the produce of the interior to market. Alabama has several navigable, but not deep, rivers.

The magnificent regions of the west are traversed by the great navigable waters of the Mississippi, Missouri, Ohio, and the numerous rivers which flow into them from the east, north, and west. Lakes Huron, Michigan, and Superior complete this vast extent of internal navigation.

We have, in the first part of this work, given a detailed account of the great lakes; and, in our special account of each state (which see), we have described the bays, harbours, and rivers of each. The Mississippi, Missouri, and some of their great branches, require some further description.

The MISSISSIPPI, or *Missi-Sepe*, in the Algonquin Indian language, which prevails in its upper parts, means *Great river*. Its source, according to the explorations of Schoolcraft, July 13th, 1832, is Itasca Lake, 47 deg. 10 min. north latitude, and 95 deg. 54 min. west longitude, at an elevation of about 1350 feet, and at a distance of 3160 miles, above the Gulf of Mexico. Itasca Lake is romantically situated among hills clothed with pines. The outlet of the lake is only from ten to twelve feet broad, and from twelve to eighteen inches deep. This first stream of the Great River is little more than a mere brook, flowing north and north-easterly to Lake Cass, about 184 miles, from thence it winds, generally in a south-east, south-south-westerly, and south-south-easterly direction, frequently over rapids, to the Big Falls, and thence about sixty miles further to the Falls of St. Anthony. Vessels do not ascend the river over these falls; and they pass below, over several rapids, even as low down as Rivière des Moines. The country above the Falls of St. Anthony we have described, as well as the principal tributaries which fall into the Mississippi, above, and, for a considerable distance, below and west of those falls, in our separate account of Wisconsin, Iowa, and the Western Territory. Most of those tributaries, although interrupted by some falls, and several rapids, afford, by boats and canoes, extensive and convenient means of inland transport.

The Mississippi, with its great and lesser tributaries, drain all the regions which extend from the Alleghany chain to the Rocky Mountains, with the exception of the lands drained by the streams which fall into the St. Lawrence and the great lakes.

Mr. Schoolcraft has described the Mississippi more intelligibly, and at greater length, than any other traveller. He had followed its stream, from its mouths, or delta, to its source. No other traveller had done so before him. We do not know that any other one traveller has followed his example. We have also examined the local descriptions of other authorities. It is remarkable that the greatest rivers in North and South America should have been first discovered, not upwards from their confluence with the sea, but downwards from one of their upper or main branches. The Amazon was first navigated, down to the Atlantic, by an European, Orellana, in a frail craft built near the foot of the Andes. In this vessel he floated down the Naco, an upper tributary, to the main stream of the Amazon, and thence, without compass, and through unknown regions, to the ocean.

The Mississippi was discovered in 1672, by the Jesuit, Father Marquette,

who, with his followers, by ascending the Fox river, from Lake Champlain in canoes, carried the latter and their stores, over the Portage, a few miles, to the Wisconsin, descended that stream until they reached the Mississippi, in about latitude 42 deg. 50 min. north. They floated down with its current until they passed the confluence of the Missouri, and reached some villages of Illinois, who received them hospitably. They proceeded downwards, until they arrived at the Arkansas; from which point they returned afterwards to Canada. In 1682, the intrepid La Salle sailed down the Mississippi from the Wisconsin to the Gulf of Mexico.

Mr. Schoolcraft, describing the physical character of the Mississippi, distributes it into natural divisions, as indicated by the permanent differences in the colour of its waters,—the geological character of its bed and banks,—its forest trees and other vegetable productions,—its velocity,—the difficulties it opposes to navigation,—and other natural appearances and circumstances.

He traces it from its origin in a region of lakes, which are spread over tablelands, the waters of which flow north into Hudson's Bay, south into the Gulf of Mexico, and east into the lakes, rivers, and Gulf of St. Lawrence. He follows the course of the Mississippi to the Falls of Pakagama, a distance of 230 miles "through a low prairie, covered with wild rice, rushes, sword grass, and other aquatic plants. During this distance, it is extremely devious as to course and width, sometimes expanding into small lakes, at others, narrowing into a channel of about eighty feet. It is about sixty feet wide on its exit from Red Cedar or Cassina Lake, with an average depth of two feet; but from the junction of the Leech Lake fork, increases to 100 feet in width, with a corresponding increase of depth. Its current, during this distance, is still and gentle; and its mean velocity may be estimated at a mile and a half per hour, with a descent of three inches per mile." Water-fowl and amphibious quadrupeds are met with in great numbers within this region.

Rocky strata and a wooded island appear at the Falls of Pakagama, where the river descends by an abrupt cataract, twenty feet: from which point to the Falls of St. Anthony, a distance of about 685 miles, it exhibits its second characteristic division. The prairie disappears above the Cataract of Pakagama. Groves of elm, maple, birch, oak, and ash, then rise, and extend back from the banks of the river,—overshadowing and adorning its clear and majestic waters. The black walnut first appears below Sandy Lake river, and the sycamore below the River de Corbeau. The Mississippi, in its many windings above the Falls of St. Anthony, is picturesquely adorned with innumerable, richly wooded, islands. Of its tributaries, the largest in this distance is the De Corbeau, flowing from the south-west. The Pine, Elk, Sac, and Crow rivers, also flow into it from the west, and the St. Francis and Rum River from the east. The meanderings of the Mississippi below the Cataract of Pakagama are irregular, but neither

so short nor so abrupt as above. Mr. Schoolcraft estimates the mean width of the stream at 300 feet until the junction of the De Corbeau, and below that at 250 yards.

"Its navigation," he observes, "is impeded, agreeably to a memorandum which I have kept, by thirty-five rapids, nineteen ripples, and two minor falls, called the Little and the Big Falls, in all of which the river has an aggregate descent of 224 feet in 14,640 yards, or about eight miles. The mean fall of the current, exclusive of the rapids, may be computed at six inches per mile, and its velocity at three miles per hour. In the course of this distance it receives several small turbid streams, and acquires a brownish hue, but still preserves its transparency, and is palatable drink-water. A few miles above the river Corbeau, on the east side, we observe the first dry prairies, or natural meadows, and they continue to the Falls of St. Anthony. These prairies are the great resort of the buffalo, elk, and deer, and are the only parts of the banks of the Mississippi where the buffalo is now to be found. Granite rocks appear at several of the rapids, in rolled pieces, and in beds; and, in some places, attain an elevation of 100 or 200 feet above the level of the water, but the banks of the river are generally alluvial.

"At the Falls of St. Anthony, the river has a perpendicular pitch of forty feet, and, from this to its junction with the Missouri, a distance of 843 miles, it is bounded by limestone bluffs, which attain various elevations, from 100 to 400 feet, and present a succession of the most sublime and picturesque views. This forms the third characteristic change of the Mississippi. The river prairies cease, and the rocky bluffs commence precisely at the Falls of St. Anthony. Nine miles below, it receives the St. Peter's from the west, and is successively swelled on that side by the Ocano, Iowa, Turkey, Des Moines, and Salt rivers; and, on the east, by the St. Croix, Chippeway, Black, Wisconsin, Rock, and Illinois. One hundred miles below the Falls of St. Anthony, the river expands into a lake, called Pepin, which is twenty-four miles long, and four in width. It is, on issuing from this lake, that the river first exhibits, in a striking manner, those extensive and moving sand-bars, innumerable islands and channels, and drifts and snags, which continue to characterise it to the ocean. Its bends from this point onwards are larger, and its course more direct, and, although its waters are adulterated by several dark coloured and turbid streams, it may still be considered transparent. The principal impediments to navigation in this distance are the Des Moines, and Rock river rapids. The latter extends six miles, and opposes an effectual barrier to steamboat navigation, although keelboats and barges of the largest classes may ascend. This rapid is 390 miles above St. Louis."

The crystalline transparency of the Mississippi gradually disappears, after its confluence with the Missouri. Had not the Mississippi been the first discovered and explored, the Missouri would have, as the main stream, given its name to the Great River, down to the Gulf of Mexico. The waters of the Missouri are turbid, and of a gray colour; and Mr. Schoolcraft observes, that "during its floods, which happen twice a year, it communicates, almost instantaneously, to the combined stream, its predominating qualities; but, towards the close of the summer season, when it is at its lowest stage of water, the streams do not fully incorporate for twenty or thirty miles, but preserve opposite sides of the river; and I have observed this phenomenon at the town of Herculaneum, forty-eight miles below the junction. The water in this part of the river cannot be drank until it has been set aside to allow the mud to settle." The appearance of the Mississippi, after the foul waters of the Missouri acquire the mastery, has a sooty, dark, and mysterious character, and the dismal scenery of its low muddy banks; and its dreaded snags, sawyers, sand-bars, and its numerous fixed, shifting, and unseen dangers, renders its navigation neither agreeable nor safe. Below the Missouri, its great importance must be considered in regard to its commerce, and the vast resources of the countries through which its tributaries flow. The distance from the mouth of the Missouri to the Gulf of Mexico is estimated by Mr.

Schoolcraft at 1220 miles, in the course of which it receives from the west the Maramac, St. Francis, White, Arkansas, and Red rivers; and, from the east, the Kaskaskia, Great Muddy, Ohio, Wolf, and Yazoo. This part of the river is particularly characterised by snags and sawyers, falling-in banks, islands, sand-bars, and mud-banks; the channel of which is shifted by every succeeding flood. The velocity of its stream was formerly considered so strong, that it could not be navigated by sailing vessels. This belief was unfounded, although a strong wind is required to ascend the river; and it is navigated by ocean sailing ships of from 400 to 800 tons' burden, from the Balize to New Orleans, a distance of 105 miles, and could be ascended higher, but the navigation above New Orleans is carried on chiefly by steamboats. The breadth of the river opposite St. Louis is about a mile. It is somewhat less at New Orleans, and still less at its principal mouth. A bar at its deepest entrance prevents ships drawing more than eighteen feet water from entering. Wild rice is not found on the waters of the Mississippi, south of the forty-first degree of north latitude; nor the Indian reed, or cane, north of the thirty-eighth. These two productions characterise the extremes of this river. It has been observed by MacKenzie, that the former is hardly known, or at least does not come to maturity, north of the fiftieth degree of north latitude. The alligator is first seen below the junction of the Arkansas. The paroquet is found as far north as the mouth of the Illinois, and flocks of paroquets have occasionally been seen as high as Chicago.

Sailing ships seldom ascend the Mississippi higher than Natchez. It is navigable for steamboats of the largest size as far as the Ohio. (See number and size of steamboats upon the Mississippi hereafter.) The passage from Cincinnati to New Orleans and back has been made in nineteen days. From New Orleans to Louisville the shortest passage has been eight days and two hours: the distance being 1650 miles, against the current. The steamboats have generally high-pressure power, and many fatal explosions have happened upon these waters. The first steam-vessel for navigating the Mississippi was built in 1810.

The following description of a flood on the Mississippi, is from the pen of the celebrated naturalist, Audubon:—

"There the overflow is astonishing; for no sooner has the water reached the upper part of the banks, than it rushes out and overspreads the whole of the neighbouring swamps, presenting an ocean overgrown with stupendous forest trees. So sudden is the calamity, that every individual, whether man or beast, has to exert his utmost ingenuity to enable him to escape from the dreaded element. The Indian quickly removes to the hills of the interior, the cattle and game swim to the different stripes of land that remain uncovered in the midst of the flood, or attempt to force their way through the waters until they perish from fatigue. Along the banks of the river the inhabitants have rafts ready made, on which they remove themselves, their cattle, and their provisions, and which they then fasten with ropes or grape vines to the larger trees, while they contemplate the melancholy spectacle presented by the current, as it carries off their houses and wood-yards piece by piece. Some who have nothing to lose, and are usually known by the name of *squatters*, take this opportunity of traversing the woods in canoes, for the purpose of procuring game, and particularly the skins of animals, such as the deer and bear, which may be converted into money.

They resort to the low ridges surrounded by the waters, and destroy thousands of deer merely for their skins, leaving the flesh to putrefy.

"The river itself, rolling its swollen waters along, presents a spectacle of the most imposing nature. Although no large vessel, unless propelled by steam, can now make its way against the current, it is seen covered by boats laden with produce, which, running out from all the smaller streams, float silently towards the city of New Orleans, their owners, meanwhile, not very well assured of finding a landing-place even there. The water is covered with yellow foam and pumice, the latter having floated from the rocky mountains of the north-west. The eddies are larger and more powerful than ever. Here and there tracts of forests are observed undermined, the trees gradually giving way, and falling into the stream. Cattle, horses, bears, and deer, are seen at times attempting to swim across the impetuous mass of foaming and boiling water; whilst here and there a vulture or an eagle is observed perched on a bloated carcass, tearing it up in pieces, as regardless of the flood as on former occasions it would have been of the numerous *sawyers* and *planters* with which the surface of the river is covered when the water is low. Even the steamer is frequently distressed. The numberless trees and logs that float along, break its paddles and retard its progress. Besides it is on such occasions difficult to procure fuel to maintain its fires; and it is not only at very distant intervals that a wood-yard can be found which the water has not carried off.

"Following the river in your canoe, you reach those parts of the shores that are protected against the overflowing of the waters, and are called *levees*. There you find the whole population of the district at work, repairing and augmenting those artificial barriers which are several feet above the level of the fields. Every person appears to dread the opening of a *crèveuse*, by which the waters may rush into his fields. In spite of all exertions, however, the *crèveuse* opens, and water bursts impetuously over the plantations, and lays waste the crops which so lately were blooming in all the luxuriance of spring. It opens up a new channel, which, for aught I know to the contrary, may carry its waters even to the Mexican gulf.

"But now, kind reader, observe this great flood gradually subsiding, and again see the mighty changes which it has effected. The waters have now been carried into the distant ocean. The earth is everywhere covered by a deep deposit of muddy loam, which, in drying, splits into deep and narrow chasms, presenting a reticulated appearance, and from which, as the weather becomes warmer, disagreeable, and at times noxious, exhalations arise, and fill the lower stratum of the atmosphere, as with a dense fog. The banks of the river have almost everywhere been broken down in a greater or less degree. Large streams are now found to exist, where none were formerly to be seen, having forced their way in direct lines from the upper parts of the bends. These are, by the navigator, called *short cuts*. Some of them have proved large enough to produce a change in the navigation of the Mississippi. If I mistake not, one of these, known by the name of *Grand Cut-off*, and only a few miles in length, has diverted the river from its natural course, and has shortened it by fifty miles. The upper parts of the islands present a bulwark consisting of an enormous mass of floated trees of all kinds, which have lodged there. Large sand-banks have been completely removed by the impetuous whirls of the waters, and have been deposited in other places. Some appear quite new to the eye of the navigator, who has to mark their situation and bearings in his log-book. The trees on the margins of the banks have in many parts given way. They are seen bending over the stream, like the grounded arms of an overwhelmed army of giants. Everywhere are heard the lamentations of the farmer and planter, whilst their servants and themselves are busily employed in repairing the damages occasioned by the floods. At one *crèveuse* an old ship or two, dismantled for the purpose, are sunk, to obstruct the passage opened by the still rushing waters, while new earth is brought to fill up the chasms. The squatter is seen shouldering his rifle, and making his way through the morass, in search of his lost stock, to drive the survivors home, and save the skins of the drowned. New fences have everywhere to be formed; even new houses must be erected, to save which from a like disaster, the settler places them on an elevated platform, supported by pillars made of the trunks of trees. The lands must be ploughed anew; and if the season is not too far advanced, a crop of corn and potatoes may yet be raised. But the rich prospects of the planter are blasted. The traveller is impeded in his journey, the creeks and smaller streams having broken up their banks in a degree proportionate to their size. A bank of sand which seems firm and secure, suddenly gives way beneath the traveller's horse, and the next moment the animal has sunk in the quicksand, either to the chest in front, or over the crupper behind, leaving its master in a situation not to be envied.

"Unlike the mountain torrents and small rivers of other parts of the world, the Mississippi rises but slowly during these floods, continuing for several weeks to increase at the rate of about an inch in the day. When at its height, it undergoes little fluctuation for some days, and after this subsides as slowly as it rose. The usual duration of a flood is from four to six weeks, although, on some occasions, it is protracted to two months.

"Every one knows how largely the idea of floods and cataclysms enter into the speculations of

the geologist. If the streamlets of the European continent afford illustrations of the formation of strata, how much more must the Mississippi, with its ever-shifting sandbanks, its crumbling shores, its enormous masses of drift-timber, the source of future beds of coal, its extensive and varied alluvial deposits, and its mighty mass of waters rolling sullenly along, like the flood of eternity!"

Before discussing any of the navigable tributaries of the Mississippi, we may proceed to give some account of the, in reality, main stream.

The Missouri has its origin, as well as some of its branches, in the Rocky mountains, and the chief source is said to rise at about a mile distant from that of one of the branches of the Columbia. The most authentic information we have yet had, of the sources of this mighty river, is from its first discoverers, Lewis and Clarke. Those travellers consider that the Missouri seems to be, in its early course, formed by three considerable branches, which unite not far from the base of the principal ranges of the Rocky mountains. To the northern they gave the name of Jefferson, to the middle Gallatin, and to the southern Maddison. All these streams flow with great velocity; their beds are formed of smooth pebble and gravel, and their waters are transparent. One hundred miles above the forks of the Missouri, are the forks of Jefferson river; two subordinate branches of which are called Wisdom and Philanthropy, one coming from the north-west, and the other from the south-east. Wisdom river is fifty yards wide, cold, rapid, and containing a third more water than the Jefferson; it drains the waters of melting snows from the mountains, but is unnavigable on account of its rapidity. One hundred and forty-eight miles further up is the extreme navigable point of the river, in north latitude forty-three degrees thirty minutes and forty-three seconds. Two miles beyond this is a small gap or narrow entrance, formed by the high mountains which recede on each side, at the head of an elevated valley, ten miles long and five broad, so as to form a spacious cove several miles in diameter. From the foot of one of the lowest of these mountains, which rises with a gentle ascent of half a mile, issues the remotest water of the Mississippi. At the source it is said that the temperature is so high that, at the end of August, water standing in vessels exposed to the night air has been frozen to the depth of a quarter of an inch.

After the junction of the three branches, the river foams onward, as a large mountain torrent. It then spreads into a broad, and comparatively, tranquil stream, full of islands. Peaks of blackish rock frown above the river in perpendicular elevations of about a thousand feet. The mountains around which it flows are covered with pines, cedars, and furs; and *mountain sheep* are seen bounding on their summits, where they are apparently inaccessible. In this distance the mountains have an aspect of wild, sombre grandeur. On the meadows and along the banks, the most common wood is the cotton-tree, which, with the willow, forms almost the exclusive growth of the Upper Missouri.

About forty-seven miles below where the Missouri gushes from the foot of the mountains into its channel through the upper plains, are the *Gates of the Rocky mountains*. In ascending the stream, it increases in rapidity, depth, and breadth, to the mouth of this formidable pass, where the rocks approach it on both sides, rising perpendicularly from the edge of the water to the height of 1200 feet. Near the base they are composed of black granite; but above, the whole are of a yellowish brown, and cream colour. Nothing can be imagined more tremendous than the frowning darkness of these rocks, which project over the river, and menace the passenger with destruction. For the space of five miles and three quarters, the rocks rise to the above degree of elevation, and the river, 350 yards broad, seems to have forced, or *sawn* its channel through the solid rocks, for nearly six miles in length; incased, as it were, during all this distance, between two walls of about 1200 feet high. During the whole of the distance the water is very deep, even at the edges; and, for the first three miles, there is not a spot, except for a few yards, on which a man could stand between the water and the towering perpendicular cliffs.

The river, for the distance of about seventeen miles, becomes almost a continued cataract. In this distance its perpendicular descent is 362 feet. The first fall is ninety-eight feet; the second, nineteen; the third, forty-seven; the fourth, twenty-six. Next to the Niagara, these falls are the most stupendous of any known in the world. The Missouri continues to rush furiously onward for a long distance beyond, but there is not much variation in its appearance until its confluence with the Platte, which river brings down vast quantities of coarse sand. The Missouri is then studded with islands. The formation of which is minutely described by Lewis and Clarke. The sand, as it has drifted down, has adhered to some of the projecting points of the shore, and formed a hard barrier of resistance to the mud, which fills up the river to the same height with the sand-bar itself. As soon as it has acquired consistency, willows grow, their roots imparting solidity to the whole: with further accumulations, the cotton-wood tree next appears, till the soil is gradually raised to a point above the highest freshets. Thus stopped in its course, the water seeks a passage elsewhere, and, as the soil on each side is light and yielding, what was only a peninsula becomes gradually an island; and the river, during the period of formation scoops additional room for its waters from the adjacent shore. In this way the Missouri, like the Mississippi, is continually cutting off the projections of the shore, and leaving its ancient channel, which may be traced by the deposits of mud, and a few stagnant ponds.

Along the whole course of the Missouri, below the Platte, the soil is described as generally fertile, and, although timber is scarce, there is still sufficient for the use of settlers. Above the Platte, although the soil is said to be rich, the

non-appearance of wood, and the want of good water, of which there is but a small quantity in the creeks, form great disadvantages in regard to its occupancy. The prairies, for many miles on each side of the river, produce abundance of good pasturage.

Above the mouth of the Osage, the immediate valley of the Missouri gradually expands, comprehending some wide bottoms, in which are many settlements, gradually increasing in the number of inhabitants. The Manito rocks, and some other precipitous cliffs, are the terminations of low ranges of hills, through which the river flows. These hills sometimes cause rapids, and opposite the Manito rocks, a group, called the Thousand Islands, stretches obliquely across the river, separated by narrow channels, in which the current is stronger than below. Some of the channels are obstructed by floating trees, which usually accumulate about the upper ends of islands, and are called *rafts*. After increasing to a certain extent, portions of these rafts become loosened, and float down the river, covering nearly its whole surface, and greatly impeding and endangering the progress of the ascending boats.

Council Bluffs, the seat of an important military establishment of the United States, about 600 miles up the Missouri, is a remarkable bank, rising abruptly from the brink of the river, to an elevation of 150 feet.

The Missouri, with its continuation down the Mississippi, is the longest river in America.* Its whole course, from its source in the Rocky mountains to the Gulf of Mexico, is 4424 miles, including its windings: nearly 4000 miles of this course is navigable. From the point of its confluence with the Mississippi to Fort Mandan, it is 1609 miles; to the foot of the rapids at Great Falls 2575 miles; 2664 to where it issues from the mountains; 2690 to the Gates of the Mountains; 3096 to the extreme navigable point of Jefferson river; and 3124 miles to its remotest source. In this immense course it receives upwards of fifty large rivers, and about 150 smaller streams. Its principal tributaries are the Roche-Jaune, or Yellowstone, the Kansas, Platte, Osage, Gasconade, Little Missouri, Running Water, Charaton, White, and Milk rivers.

The YELLOWSTONE is the largest of these tributaries. Its sources are in the Rocky mountains, near those of the Missouri and the Platte, and it may be navigated in canoes almost to its head. It runs first through a mountainous country; in many parts fertile and well timbered. It then waters a rich country, interspersed with valleys and meadows, and well supplied with wood and water, until

* "The American Fur Company have sent their steamboats *twenty-one hundred miles* above the mouth of the Missouri, and in high water, steamboats of light draft can ascend *two thousand and six hundred miles*. The Mississippi is navigable by steam between *six and seven hundred miles* above St. Louis. These rivers pass through an exceedingly fertile country; and when a just system of internal improvement shall be carried into operation, not only New Orleans and the great valley of the Mississippi will be benefited, but every portion of the United States will feel the invigorating influence of such a course."—*St. Louis Republican*.

near the Missouri it flows through open meadows and low grounds wooded on its borders. In the upper country its course is said to be very rapid, but during the two last, and largest, portions, its current is much more gentle than that of the Missouri. On the sand-bars, and along the margin of this river, grows the small-leaved willow; in the low grounds adjoining, are scattered rose bushes three or four feet high, the red-berry, service berry, and redwood. The higher plains border either immediately on the river, where they are generally timbered, and have an undergrowth like that of the low grounds, with the addition of the broad-leaved willow, gooseberry, purple currant, and honeysuckle; or they grew between the low grounds and the hills, and for the most part without wood, or any growth; except large quantities of wild hyssop, a plant which rises to the height of about two feet: like the willow of the sand-bars, it is a favourite food of the buffalo, elk, deer, grouse, porcupine, hare, and rabbit.—*Lewis and Clarke.*

The PLATTE is much more rapid than the Missouri, and drives its current to the northern bank, on which it is constantly encroaching. At some distance above the confluence, the Missouri is two miles wide, with a rapid current of ten miles an hour in some parts, the rapidity increases as it approaches the mouth of the Platte; the velocity of which, combined with the vast quantity of rolling sands which are drifting down it, into the Missouri, renders it unnavigable, except for flats or rafts, or by the Indians who pass it in small flat canoes made of hides, and the Americans who have contrived to navigate it by means of keel-boats, which, being constructed to draw but little water, and built upon a small flat keel, are remarkably well adapted for ascending rapid and shallow streams. The Platte winds its course, from west to east, for more than 800 miles.

The KANSAS is described as resembling the Missouri, with a more moderate current, and waters less turbid. Its valley, like that of the Missouri, consists of a deep and fertile soil, producing forests of cotton-wood, sycamore, and other trees, interspersed with meadows; but in the upper part the trees become more and more scattered, and at length disappear: the country around its sources spreads into an immense prairie.

The OSAGE, so called from the tribe of Indians inhabiting its banks, flows into the Missouri 133 miles above its confluence with the Mississippi. Its sources are in the Ozark mountains. Flowing along the base of the north-western slope of a mountainous range, it receives from the east several rapid tributaries. In point of magnitude this river ranks with the Cumberland and Tennessee. It has been represented as navigable for 600 miles, but this Major Long considers an exaggeration, on account of the great number of shoals and sand-bars in its current. In the lower part of its course it traverses broad and fertile bottom-lands, bearing heavy forests of sycamore and cotton-trees.

The CHARATON is seventy-five yards wide at its mouth, and navigable at high flood 150 miles. Half a mile from its confluence with the Missouri, it receives the *Little Charaton*, also a considerable stream, and navigable for many miles. The Charaton has its source near the *Des Moines* tributary of the Mississippi, and traverses a country described as of great importance, both on account of the fertility of its soil, and its inexhaustible mines of lead.

The ARKANSAS rises in the Rocky mountains, in about 42 deg. north latitude, near the sources of the Rio del Norte, on the borders of the territory of the United States and Mexico. It is about 2120 miles in length, flowing generally east south-east. Its tributary streams are little known; they are remarkable for being deeply impregnated with salt. That part of Arkansas which traverses the Missouri territory is bordered, for the most part, by extensive prairies. Spurs of the Ozark mountains often terminate at the river. It may be remarked as singular, that to the extent of upwards of 300 miles in the lower part of the Arkansas, its valley is merely confined to the margin of the river. The soil on each side within the Missouri territory is chiefly alluvial, and where not disturbed by the floods, is verdant and fertile. The timber growing in the Arkansas country is similar to the woods of Mississippi. The Arkansas drains about 178,000 square miles of territory, and is navigable for boats about 200 miles.

On the impediments to, and dangers of, navigating the Mississippi, a writer in the *Merchants' Magazine* makes the following observations:

"In the first place, we would allude to a fact which has long been a formidable obstacle to the safe navigation of the Mississippi, as well as the cause of much individual hazard, and the sacrifice of numerous lives and a considerable amount of property. It is, perhaps, well known, that the bed and banks of the Mississippi and Missouri are, for the most part, composed of alluvial deposits of sand, the latter of which are covered with large trees. When, as is often the case, the current of the stream rises, the banks not unfrequently fall, and these trees are carried off by the stream. The sand and earthy substance adheres to the root, causing that part to sink, and to leave the tree anchored in the bed of the river. Deposits of sand are thus formed about the roots, and the obstruction thus produced frequently forces the channel in another direction. By the action of the water or the ice, the branches are worn off, leaving a stem, which sometimes projects above water, sometimes is submerged a few feet, and sometimes is so deeply buried below the surface as to be entirely concealed from sight. These obstructions, which present themselves with greater or less frequency throughout the greater portion of the bed of the Mississippi, vary in danger according to the position in which they chance to be placed. They are termed *snags*; and, coming into collision with the steamboats at midnight, or during a fog, are the source of no small discomfort to passengers—not unfrequently forcing a hole through the boat, sinking the hull, injuring the cargo, and even destroying lives.

"These obstacles most commonly occur in the bends of the rivers, or in those parts where the currents are obstructed by islands or sand-bars. Indeed, they present themselves occasionally in such numbers, that the boats are fenced in by these fallen trees, insomuch that a boat-master upon the Missouri was recently obliged to cut his way through them; and they tend to impede the navigation of that river to such an extent as to call for the attention of Congress. With that view, the chamber of commerce of the city of St. Louis have adopted vigorous proceedings in relation to the improvement of the navigation of the Mis-

Mississippi river and its principal tributaries. The amount of value afloat upon it, at all times during the season of navigation, and the value of the property whose fate would be probably involved in the improvement, naturally calls for some effective aid on the part of the general government. Independently of the carrying trade from the remote interior, the cotton and sugar plantations, which send their cargoes abroad from the states of Louisiana and Mississippi, Tennessee and Arkansas—the tobacco which is yearly shipped from the states of Kentucky and Tennessee, Mississippi and Illinois—together with the manufactured articles imported and exported from those states, exceeding in value that of its agricultural products, and the importance, as places of shipment, of the numerous ports upon the river—all tend to present additional claims for the aid of Congress.

“The removal of those obstructions which have so long impeded the Mississippi navigation, would seem to be a no very difficult object. The most convenient instrument for that purpose is termed a *snug-boat*, which, with its machinery, will usually remove about twenty per day: the cost of working the boat being fifty or seventy dollars, and requiring fifty men; and the expense of construction being from 25,000 dollars to 26,000 dollars. The numerous wrecks of *snagged* steamboats, which strew that noble river—the fact that freights and persons from nearly half of the union are afloat continually upon its bosom—that nearly 6,000,000 of people, residing in the bordering territory, would be benefited in greater or less degree by the improvement; and that the imports and exports of nine states and two territories, which skirt its banks, must pass along its waters, tend materially to strengthen the claims which have been urged before Congress for the improvement of its navigation. Hundreds of thousands of persons are sailing upon its surface during the season of navigation—property to the amount of millions of dollars are risked upon its waters. The merchants and manufacturers of the east are deeply interested in the subject, because the advance of freights is not less than ten per cent, in consequence of the difficulties of navigation; and the losses of insurance companies, yearly, amount to no inconsiderable sum. Moreover, not one-tenth part of the land which skirts it has been subdued to cultivation; and the bright prospects of wealth and strength that are continually unfolding, from the developing resources of the soil, are ever adding to the value and importance of the desired improvement as a merely mercantile enterprise, important from the fact that, of the total number of steamboat losses throughout the whole country, the greater proportion occur upon the Mississippi river.”

The RED RIVER is the lowest great tributary which flows into the Mississippi. Its source, or rather sources, rise at the lower range of the Rocky mountains, near Santa Fé, in Mexico. The several head branches unite into one, into which flow several tributaries, the largest of which are Blue river, and False Washita. The south bank of it forms, for a great distance, the boundary between the United States and Texas. A great part of its course is through rich prairies of a red soil; which, colouring its waters, has given this river its name. Its banks are covered with grass, and vines, which are said to yield excellent grapes. About 100 miles above Natchitoches, that great impediment to navigation, called *the Raft*, commences, over and through the alluvions and fallen trees which the waters have carried and deposited. This interruption occurs at a shallow expansion of the river to the width of twenty or thirty miles, and a length of sixty or seventy miles. In some places, the rafts covered the whole river, and had grass and willows growing on the alluvial soil collected on it, and could be even crossed on horseback, though not without danger. But more generally the river appeared between the masses of collected timber. At a great expense, this raft has been so far removed by the United States government, that steamboats pass through it.

The **WASHITA**, a tributary, which flows into Red river, is navigable for many miles. Its course, within the valley of the Mississippi, called Black river, is navigated by large boats. **WHITE RIVER**, which flows into the Mississippi a little above the Arkansas, is navigable at a moderate flood of water between 300 and 400 miles. Of the rivers tributary to the Missouri, it is remarkable, that their mouths are generally blocked up with mud, after the subsiding of the summer freshet of that river, which usually takes place in the month of July. The freshets of the more southerly tributaries are exhausted earlier in the season, and wash from their mouths the sand and mud previously deposited therein, leaving them free from obstructions. These freshets having subsided, the more northerly branches discharge their floods, formed by the melting of the snow, at a later period. The Missouri being thus swollen, the mud of its waters is driven up the mouth of its tributaries. These streams having no more freshets to expel the accumulation, their mouths remain thus obstructed till the ensuing spring.—*Long's Travels*.

The **ST. PETER**, a tributary of the Mississippi, has its rise in a small lake about three miles in circumference, at the base of a ridge, named Coteau des Prairies. It enters the Mississippi nine miles below the Falls of St. Anthony. Its length in all its windings is about 500 miles. Its course is exceedingly serpentine, and is interrupted by several rocky ridges, extending across the bed of the river, and occasioning falls of considerable descent. During the times of spring freshets and floods, this river is navigable for boats from its mouth to the head of Big Stone lake, about fifteen miles from its sources. For a distance of about forty miles on the lower part of the river, it is only from sixty to eighty yards wide, and navigable for pirogues and canoes in all stages of the floods; higher up, its navigation is obstructed in low water by numerous shoals and rapids. The aggregate descent of the St. Peter may be estimated at about 150 feet, the general level of the country at its source having an elevation of about fifty feet above the river. The chief of its tributaries is the Blue-earth river, which flows in from the south 100 miles west of the Mississippi by a mouth fifty yards in width. It is chiefly noted for the blue clay which the Indians procure upon its banks, and which is much employed in painting their faces and other parts of their bodies. The river St. Peter's enters the Mississippi behind a large island, which is probably three miles in circumference, and is covered with the most luxuriant growth of sugar-maple, elm, ash, oak, and walnut. At the point of embouchure, it is 150 yards in width, with a depth of ten or fifteen feet. Its waters are transparent, and present a light blue tint on looking upon the stream. From this circumstance, the Indians have given it the name of Clear-water river.—*Book of United States*.

The **RED RIVER** of the north rises near the sources of the St. Peter's; and by a northern and winding course runs nearly 200 miles within the United States limits; and then passes into the British dominions of Upper Canada, and empties

into Lake Winnepeck. Its principal branches are Red Lake river and Moose river: the latter of which rises within a mile of Fort Mandan on the Missouri. Red river is a broad, deep, and navigable stream, abounding with fish, and the country along its banks with elk and buffaloes.

The OHIO.—The name *Ohio* is said to signify in the language of the aborigines, "the beautiful river." Above Pittsburg it is called the *Alleghany*: the source of which is in Pennsylvania, in north latitude forty-one degrees and forty-five minutes, and west longitude seventy-eight degrees. It is formed by two small streams. At Pittsburg, where the *Alleghany* receives the *Monongahela*, the main river is there called the Ohio. The *Monongahela* is formed by the confluence of two streams, both rising in the *Alleghany* chain, in the north-west angle of Virginia, and running parallel to each other for sixty miles in nearly a direct line. The absolute course of the *Monongahela* is more than 200 miles, but not above 130 in a direct line from south to north. It appears to be a larger and deeper stream at Pittsburg than the *Alleghany*, which, in the dry season, has not above seven feet water, where deepest. The waters of the *Alleghany* are always clear and limpid, while those of the *Monongahela*, on the contrary, become muddy and turbid, whenever there are a few days of successive rain in that part of the *Alleghany* mountains where it rises. Each of the streams is about 100 yards wide at their confluence, and after the junction, the stream is more remarkable for its depth than breadth.

The OHIO, formed by the junction of the *Monongahela* and *Alleghany*, appears to be rather a continuation of the former than the latter, which arrives at the confluence in an oblique direction. From Pittsburg to the mouth of the Ohio, the distance is 1033 miles, following the stream. It receives numerous tributaries on both sides, in its course to the Mississippi. For 300 miles below Pittsburg, the Ohio runs between two ridges of hills, rising from 300 feet to 400 feet in height. These are frequently undulated along their summits, and extend occasionally as elevated table lands. They sometimes recede from, and sometimes approach to, the banks of the river; generally run parallel to the *Alleghany* chain. These ridges recede gradually as we proceed down the river, and finally disappear from the view. The Ohio flows through a transverse chain, at the rapids, near Louisville, and thence through a level country, as far as the Mississippi. The general appearance of this picturesque river is placid, gentle, and transparent, except during the floods. There are periodical inundations in winter and in spring. The vernal inundations of the Ohio commence sometimes at the end of March, and subside in July; and sometimes early in February, and subside in May. The inundations are early or late, according to the melting of the snows or the ice in the interior. The Ohio, during these inundations, is swelled to a remarkable height, varying in different places, as the river is more or less expanded in breadth. The high and steep banks, in the upper course of the Ohio, prevent the general level of the land from being overflowed, and ren-

dered marshy and unwholesome, as in the Lower Missouri, and in the lower part of the Ohio. Yet high as its banks are, the Ohio is sometimes destructive to the towns which are not sufficiently elevated above the river. Part of the town of Marietta situated at the junction of the Muskingum with the Ohio, though elevated forty-five feet above the ordinary level of the stream, has been twice inundated, and abandoned by the inhabitants. The town of Portsmouth, at the mouth of the Great Sciota, 218 miles below Marietta by water, though elevated sixty feet above the usual surface of the river, has been also subjected to a similar calamity. At Cincinnati, the breadth of the river is 535 yards, and the banks fifty feet in perpendicular height, yet these are annually overflowed. The winter floods commence in the middle of October, and continue to the latter end of December. Occasionally, during summer, heavy rains fall among the Alleghany mountains, by which the Ohio is suddenly raised; these summer inundations are rare. During the two periodical floods, which, taken together, last for nearly half the year, vessels drawing about twelve feet water navigate the river downward from Pittsburg to New Orleans, a distance of nearly 2200 miles. The voyage from Pittsburg to the falls may be accomplished in nine or ten days, but it is generally performed in twelve days. The difficulty of navigating the Ohio during the dry season, is limited to the upper part of its course, or between Pittsburg and Limestone: a distance, by water, of 425 miles. The shallowness of the stream is occasioned by its being divided by islands into several channels; for the depth of the Monongahela branch of the Ohio alone, is twelve feet, at Pittsburg. Michaux counted fifty of these islands in the distance of 390 miles; some of them only containing a few acres, and others exceeding a mile in length. A ship, of above 300 tons, called the Muskingum, arrived at the port of Liverpool, in the United Kingdom, in May, 1845, on her first voyage from Cincinnati. This vessel was built at Marietta, 283 miles above Cincinnati, with a cargo of pork, lard, oil-cake, &c., laden at the latter place. This ship performed the voyage from where built to the Gulf of Mexico, 1933 miles, and thence round Florida, by the Bahama channel, across the Atlantic, more than 5000 miles, or in all, about 7000 miles to Liverpool.

The TENNESSEE rises in the Alleghany mountains, traverses East Tennessee, and almost the whole northern limit of Alabama, re-enters Tennessee, crosses almost the whole width of it, into Kentucky, and passes into Ohio, fifty-seven miles above its junction with the Mississippi. It is near 1200 miles in length, and is the largest tributary of the Ohio. It has numerous branches, and is navigable for boats for about 1000 miles. Most of its branches rise among the mountains, and are too shallow for navigation, except during the floods, which take place occasionally, at all seasons of the year, and allow flat boats to be floated down to the main stream. The Muscle shoals are about 300 miles from its entrance into the Ohio. At this place the river spreads to the width of three miles,

and forms a number of islands. The passage by boats is difficult and dangerous, except when the water is high.

From these shoals to the place called the *Whirl*, or *Suck*, 250 miles, the navigation all the way is excellent, to the Cumberland mountain; which the river flows through. This mountain is, in parts, so steep, that even the Indians cannot ascend it on foot. In one place, particularly near the summit of the mountain, there is a remarkable ledge of rocks, about thirty miles in length, and 200 feet high, with a perpendicular front facing the south-east, forming a magnificent wall, excelling all the artificial fortifications in the known world. The Whirl is considered a greater curiosity than the famous breach by the river Potomac through the Blue Ridge.

The Tennessee, which above the Whirl is half a mile wide, contracts to a breadth of about 100 yards, or eighteen rods. A large rock which projects from the northern shore, in an oblique direction, renders the channel still narrower, and causes a sudden bend, by which the waters are thrown with great force against the opposite shore. From thence they rebound, and form a whirl of about eighty yards, or 240 feet in circumference. By the dexterity of the rowers, canoes drawn into this whirl have sometimes escaped without damage. In less than a mile below the whirl, the river spreads to its common width down to Muscle shoals; and thence flows in a regular and majestic stream down, to its confluence with the Ohio.

The WABASH rises in the north-eastern part of Indiana, and flows south-westerly across the state, then it bends to the south, and flows into the Ohio, forming towards its mouth the western state boundary. Its length, from its source to its mouth, exceeds 500 miles. It is navigable for keel-boats, about 400 miles, to Ouitanon, where there are rapids. From this village small boats proceed to within six miles of St. Mary's river; ten of Fort Wayne; and eight of the St. Joseph of the Miami-of-the-lakes. Its current flows gently above Vincennes; below the town there are several rapids, but not of sufficient force to prevent boats from ascending. The principal rapids are between Deche and White rivers, ten miles below Vincennes. White river and Tippecanoe river are branches of the Wabash.

The CUMBERLAND rises in the Cumberland mountains, Kentucky, and, flowing nearly 200 miles through that state, passes into Tennessee, through which it makes a circuit of 250 miles, then re-enters Kentucky, and falls into the Ohio, about fifty miles above the confluence of that river with the Mississippi. From the source of this river to its junction with the Ohio, the distance in a direct line is 300 miles; and by the course and windings of the stream, nearly 600 miles; for 500 of which it is navigable for batteaux of fourteen or fifteen tons burden.

The MUSKINGUM rises in the north-eastern part of Ohio, and flows southerly

into the Ohio river. It is about 200 miles in length, and is navigable for boats for about 100 miles. It is connected by a canal with Lake Erie. The *Sciota* rises in the western part, and flows southerly into the Ohio. It is about 200 miles long, and is navigable 130 miles. There are rich and beautiful prairies along the river, and its valley is wide and fertile. A canal passes along this valley, and extends north-easterly to Lake Erie. The *Licking* and *Kentucky* rivers take their rise in the Cumberland mountains, and flow north-westerly into the Ohio. They are each about 200 miles in length. The latter is navigable for 150 miles, and has a width of 150 yards at its mouth. The current is rapid, and the shores are high. For a great part of its course, it flows between perpendicular cliffs of limestone. While sailing down this stream the passenger is said to experience an indescribable sensation on looking upwards from the deep chasm bounded closely by these lofty parapets. Among the other tributaries of the Ohio, are the Great and Little Miami, Saline,* Green river, Big Sandy, Kanhawa.

The **ILLINOIS** rises in the north-eastern parts of the state of that name, no more than thirty-five miles from the south-western extremity of Lake Michigan and communicating by locks through a morass with the River Chicago, which empties into that lake. Its two main head-branches are Plein and Kankakee. Thirty miles from the junction of these rivers, Fox river flows in from the north. The Vermilion is a considerable stream, which joins the Illinois from the south, 260 miles above the Mississippi. Not far below the Vermilion and 210 miles above the Mississippi, is the commencement of Peoria lake—an enlargement of the river, two miles wide, on an average, and twenty miles in length. This picturesque expansion is so deep that its current is not perceptible. Its romantic shores, are generally bounded by prairies. It abounds with fish.

On the north side of the Illinois, the rivers that flow in-shore have their courses, for the most part, in mountainous bluffs, which often approach near the river. For a great distance above its mouth, the river is almost as straight as a canal. In summer it has scarcely a perceptible current; and the water, though transparent, has a marshy taste which renders it almost unfit for use. The river is wide and deep; and, for the greater part of its width, is so thickly filled with aquatic weeds, that no person could swim among them. Only a few yards' width, in the centre of the stream, is free from these weeds. It enters the Mississippi through a deep forest, by a mouth 100 yards wide. Probably no river of the western country is so well adapted for boat navigation, or waters a more luxuriant country.

ROCK RIVER is one of the most beautiful tributaries of the Mississippi. It has its source beyond the northern limits of Illinois, in a ridge of hills that separates the waters of the Mississippi and those of Lake Michigan. On its banks are ex-

* On the banks of this stream, about twenty miles from the Ohio, are extensive salt-works owned by the United States government.

tensive and rich lead mines. Its general course is south-west, and it enters the Mississippi, not far above the commencement of the military bounty lands. Opposite the mouth of this river, rises in the Mississippi, a beautiful island, on which there is a military station.

KASKASKIA RIVER rises in the interior of Illinois, near Lake Michigan. It flows in a south-west direction nearly 300 miles: for the greater part of which, during the moderate and higher floods it is navigated by boats. It flows through a fertile and settled country, and joins to the Mississippi a few miles below the town of the same name.

The WISCONSIN is the largest river of the North-West territory that flows into the Mississippi. It rises in the northern interior of the country, and near the Montreal of Lake Superior. It flows between 300 and 400 miles, with a shallow and rapid current, navigable by boats during the floods. It is about 800 yards wide at its mouth. There is a portage of only half a mile between this and Fox river, by which Father Marquette first passed on his way to discover the Mississippi. It is over a level prairie, across which, from river to river, there is a water communication for periogues in high stages of the water. *Fox river* flows through Winnebago lake. Its length is about 200 miles. The country along its banks is fertile, with a salubrious climate. *Chippeway* is a considerable branch of the Mississippi, which it joins just below Lake Pepin. It is half a mile wide at its mouth, and has communications by a short portage with Lake Superior. The other chief rivers of this territory, tributary to the Mississippi, are the St. Croix, Rum, St. Francis, and Savannah.

Among the smaller tributaries to the Mississippi are the Obian, Forked Deer, Big Hatchet, and Wolf rivers, all of which flow into it from Tennessee; and the Yazoo and Big Black, from the state of Mississippi. The last named rivers are only navigable for boats.

Besides the rivers which flow into the Mississippi, there are a few small streams which flow directly into the Gulf of Mexico. The *Alabama river* rises in the mountainous parts of Georgia, in two head-streams named the Coosa and Tallapoosa, and running south-westerly through the centre of the state of Alabama, unite with the Tombeckbee; both the streams then take the name of Mobile, and, flowing south for a short distance, fall into Mobile bay.

RIVERS OF BRITISH AMERICA.

The British dominions in North America are intersected with numerous rivers, which, great and small, extend over them the most convenient navigable advantages. The provinces of Nova Scotia and New Brunswick, the islands of Prince Edward and Cape Breton, are, as will be observed by a reference to any modern map, watered by navigable rivers, lakes, and arms of the sea.

The River St. John, and its tributaries, and several bays branching from it;

the rivers Peticoudiac and Mirimachi, open a magnificent inland navigation through the interior of New Brunswick. In Lower Canada, several rivers falling into the St. Lawrence, and the Rustigouche into the Bay de Chaleur, are navigable for small vessels.

The ST. LAWRENCE, or *Great River of Canada*, after flowing through Lakes Superior, Huron, Erie, and Ontario, and through the key of the Thousand Island, is rendered navigable, by cuts and canals, to Montreal, and to the Ottawa, by the Rideau Canal.

The THAMES, the OUSE, or Grand River, and some other streams falling into the St. Lawrence, are either naturally, or rendered artificially, navigable. The WELLAND CANAL is rendered navigable by sailing vessels of considerable burden, from Lake Erie to Ontario, and surmounts the otherwise impassable Niagara. Opening, by canal, a navigation projected from Lake Ontario by way of Lake Simcoe to Lake Huron would complete an internal navigation of incalculable benefit to Upper Canada.

The OTTAWA, or Great North river, although its navigation is in some places rendered difficult by rapids, opens a rich and extensive region which has been rapidly settled upon, and from which great quantities of timber are rafted down to Montreal. (See Trade of Canada.)

Large and small ships ascend from all parts of the world by the gulf, estuary, and River St. Lawrence, to Quebec and Montreal. Numerous steamboats, and various kinds of river and coasting vessels, are (except during winter, when all is locked up in ice) perpetually navigating the waters of the rivers and lakes of Canada.

The SAGUENY, a river so mighty that it is asserted to discharge as great a quantity of fresh water as the great St. Lawrence, falls into the latter from the north, about 100 miles below Quebec. It is remarkably deep, and large ships ascend it more than sixty miles, to be laden with deals and timber, prepared in the woods, or sawn at the saw-mills, which have been erected. The navigation of its upper course, flowing into Lake St. John, and its flood out of that lake, is interrupted by rapids: appearing, however, to be navigable as high as its soil can afford products for markets. Settlements have been formed, and wheat and various other crops are cultivated on its low lands, but not near its precipitous banks.

Having thus briefly described the extent of river navigation, and, in a previous part, the extent of lake navigation, we will now sketch the progress and extent of water communication by canals.

CHAPTER XV.

CANALS AND RAILROADS OF THE UNITED STATES.

THE first canals in Europe were constructed in Italy, and to a far greater extent in Holland. England had no canal until 1760, when the enterprising Duke of Bridgewater succeeded in an undertaking which was at the time considered an act of wrong-headed indiscretion.

The first attempt to construct canals, unless it were by small cuts from the Mohawk river, in the United States, was the Middlesex canal, in Massachusetts, completed in 1804; and in Pennsylvania, in 1791 and 1792, when the Schuylkill and Susquehanna companies were incorporated for the purpose of opening a water communication between the Susquehanna and the great lakes. Four to five hundred thousand dollars were expended by these companies; but subscriptions failed, and, in 1795-6, the works were abandoned.

The great canal of America is that which has opened a water communication between the River Hudson and Lake Erie. Connecting by water the great lakes with the Atlantic, is said to have been first conceived by a man, of whom the state of New York is justly proud—Gouverneur Morris.

The surveyor-general of the state, De Witt, the governor, De Witt Clinton, and others, entertained the project, with the full conviction of its practicability; and, with this view, in 1808, the legislature of New York ordered surveys, to ascertain the most practicable line, to be made. In 1810, Gouverneur Morris, Stephen Van Rensselaer, De Witt Clinton, Simeon De Witt, William North, Thomas Eddy, and Peter B. Porter, were appointed commissioners for that purpose; the names of Robert R. Livingston and Robert Fulton were added in 1811.

In pursuance of their instructions from the New York legislature, they applied to Congress, and to some of the other states; and the project was treated with ridicule, and as impracticable. But they were men not to be discouraged; and their report to the legislature, in 1812, is remarkable for intelligence, judgment, and forecast. They boldly, after calculating the estimated expense, predicted that the tolls would amply repay the state expenditure. This report states that—

“It is impossible to ascertain, and it is difficult to imagine, how much toll would be collected. The amount of transportation might be estimated, by subjecting probabilities to calculation. But, like our advance in numbers and wealth, calculation outruns fancy. Things, which twenty years ago any man would have been laughed at for believing, we now see.

“At that time the most ardent mind, proceeding on established facts, by the unerring rule of arithmetic, was obliged to drop the pen at results, which imagination could not

embrace. Under circumstances of this sort, there can be no doubt that those *microcosmic minds, which, habitually occupied in the consideration of what is little, are incapable of discerning what is great*; and who already stigmatised the proposed canal as a romantic scheme, will not unsparingly distribute the epithets, absurd, ridiculous, chimerical, on *the estimate* of what it may produce. The commissioners must, nevertheless, have the hardihood to brave the sneers and sarcasms of men, who, with too much pride to study, and too much wit to think, undervalue what they do not understand, and condemn what they cannot comprehend.

"Viewing," the commissioners add, "the extent and fertility of the country with which this canal is to open a communication, it is not extravagant to suppose, that when settled, its produce will equal the *present export of the Atlantic States*; because it contains more land, and that land of a superior quality."

The commissioners, after stating certain facts as the ground of their estimate, say—

"Standing on such facts, is it extravagant to believe that New York may look forward to the receipt (at no distant day) of *one million of dollars net revenue* from this canal? The life of an individual is short. The time is not distant when those who make this report will have passed away. But no time is fixed to the existence of a state; and the first wish of a patriot's heart is, that his may be immortal.

"But whatever limit may have been assigned to the duration of New York, by those eternal decrees which established the heavens and the earth, it is hardly to be expected that she will be blotted from the list of political societies, before the effects here stated shall have been sensibly felt. And even when, by the flow of that perpetual stream which bears all human institutions away, the constitution shall be dissolved, and our laws be lost, still the mountains will stand, the same rivers run. New moral combinations will be formed on the old physical foundations, and the extended line of remote posterity, after a lapse of 10,000 years, and the repeated revolutions, when the records of history shall have been obliterated, and the tongue of tradition have converted (as in China) the shadowy remembrance of ancient events, into childish tales of miracle, this *national work* shall remain. It shall bear testimony to the genius, the learning, the industry, and intelligence of the present age."

Gouverneur Morris may proudly claim the honour of projecting this great undertaking. To De Witt Clinton is certainly due the credit of its execution. In conjunction with his able colleagues, he persevered against a powerfully combined opposition of party, of prejudice, and of ignorance. The war between the United States and Great Britain, which broke out soon after the presentation of their report, prevented the commencement of operations on the line projected for the canal until 1817. On the 4th day of July of that year, the first excavation was made, and the canal was completed in October, 1825, at an expense of 9,027,456 dollars. In October, 1817, a canal, connecting the waters of Lake Champlain with the Erie canal, nine miles from Albany, a distance of sixty-three miles, was commenced, and finished at the close of 1823, at an expense of 1,179,871 dollars.

In eight years, a period far short of the most sanguine expectation of the commissioners, and contrary to the ignorant and prejudiced opinions of the public, the tolls exceeded the estimated returns.

Before proceeding to an account of the canals of each particular state, we will introduce a brief view of the railroads.

RAILROADS OF THE UNITED STATES.—The first attempts to construct rail-

roads were made in 1828. Tramroads were made previously for the transportation of coal, stone, and other heavy articles.

TABLE of the principal Railways in operation in the United States, in 1840.

NAME.	COURSE.	When opened.	Length in Miles.	Whole length in each State.	NAME.	COURSE.	When opened.	Length in Miles.	Whole length in each State.
MAINE.					Brought forward...				
Bangor and Orono.	From Bangor to Orono.	1836	10		PENNSYLVANIA (cont.)

CANALS AND RAILROADS OF THE NEW ENGLAND STATES.

In the separate description of these states, we have given an account of the public works and internal improvements of each (which see).

In MAINE, the Cumberland and Oxford canal, fifty miles long, was completed in 1829, at an expense of about 250,000 dollars. The Bangor and Orono canal, twelve miles long, completed in 1836.

The *Portland, Saco, and Portsmouth* railroad, communicates with the railroad to *Boston*. The railroad projected from Bangor to Portland would, if executed, complete the sea-coast line of railroads. This line of intercourse, north from Portland along the coast of Maine, is at present carried on by steamboats.

In NEW HAMPSHIRE, the canals are chiefly *cuts* with locks, for the improvement of the navigation of the Merimac river. The Massachusetts railroads pass over New Hampshire to Portsmouth, fifteen miles and three-quarters, and from Lowell to Nashua, and the Boston and Maine fourteen miles to Exeter.

MASSACHUSETTS.—For a detailed account of the railroads of this state, altogether 415 miles of which were completely in operation in 1843, see the separate account of Massachusetts. The whole length of the railroads of this state and of those communicating with them in other states, extending as far as Lake Erie, comprise 1203½ miles; see tabular statement, under the head of Public Works of Massachusetts. The Middlesex canal, from New Lowel on the Merimac to Boston, about thirty miles long, was the first canal executed in the United States. It was completed as early as 1804. It opens a further navigation by the Merimac and several canals (in all about fifteen miles) along that river to Concord, in New Hampshire.

In RHODE ISLAND the Blackstone canal extends through part of this state from Providence to Worcester in Massachusetts. The Providence and Boston railway, and the Providence and Stonington railway, forty-seven miles long, passes chiefly through this state.

In CONNECTICUT, the Farmington canal, from New Haven to the north boundary of the state, fifty-six miles; thence to Northampton, Massachusetts. At Enfield, a canal of five miles passes round the falls of the Connecticut river. The Norwich and Worcester railway extends fifty-eight miles and a half north through the state. The New Hartford and New Haven railway, thirty-six miles. The Housatonic railway, from Bridgeport to North Canaan, seventy-three miles; thence to West Stockbridge, Massachusetts.

Western (Massachusetts) railroad.—The tenth report of the directors of the Western Railroad corporation has been laid before the stockholders, and printed. It presents a very full and satisfactory account of the condition of the road and its finances, at the close of the year 1844. The capital authorised by the original charter, was 2,000,000 dollars; and it was increased 1,000,000 dollars by a subsequent act of the legislature of Massachusetts, the state subscribing for that amount—making the chartered capital 3,000,000 dollars; one-third owned by the state, and two-thirds by 1121 private stockholders.

* First year of opening through to Albany.

* As corrected in report of January, 1845, to include damages for collision of 1841.

From 1842 to 1843, the increase of receipts from passengers was 3½ per cent; increase from merchandise, 21½ per cent. From 1843 to 1844, the increase of receipts from passengers was 30½ per cent; increase from merchandise, 34½ per cent.

By reference to the tables of each year, it will be seen that the number of through-passengers is stated in 1844 less than in 1843. This is mainly owing to the fact that, in the greater part of 1843, the difference between the *through* and *way fare* was so great, that way-passengers, to a considerable extent, took through-tickets, and were thus registered as through-passengers. There was no inducement for such a practice in 1844. The whole number of tons, nett, carried one mile by the merchandise trains, was—

In 1844.....	11,166,704
1843.....	9,414,621

Increase.....1,752,083

The whole tonnage is equal to 71,581 tons carried over the whole length of the road, 156 miles. The number of miles run by merchandise trains in 1844 being 255,376, is equal to 1637 trips through, averaging 43½ tons each train. The through freight from Boston to Albany, in 1843, was 5268 tons; in 1844, 6764—increase, 1496. The amount of freight received at, and sent from, Boston, in connexion with the Western road, was—in 1844, 69,842 tons; in 1843, 56,376 tons; increase, 13,474 tons.

The number of barrels of flour, from Greenbush and vicinity, to Boston, was—

In 1844.....	154,413
1843.....	123,366—31,074

The whole number of barrels of flour sent from Greenbush to all stations, was, in 1844, 297,403. The amount charged on all merchandise forwarded eastward, from the Greenbush station, was—in 1844, 223,572 dollars; in 1843, 167,087 dollars; increase, 56,485 dollars.

The amount charged on merchandise forwarded from Greenbush eastward, in the month of January for three years, was—in 1843, 6622 dollars; 1844, 13,677 dollars; 1845, 20,216 dollars.

BOSTON AND WORCESTER RAILROAD.

Total nett income	144,850	34,781	28,167	207,798

The earnings on freight are given above, and not the receipts on freight.

Maine and Housatonic Railroad.—The length of this road, as we learn from the report of the directors, of the 20th of June, 1844, from the tide-water at Bridgeport, to the north line of the state of Connecticut, is 73 90-100 miles. In this distance there are twelve regular stations for the receipt and discharge of passengers and freight, namely: at Stepney, Botsford's, Newtown, Hawleyville, Brookfield, New Milford, Gaylord's Bridge, Kent, Cornwall Bridge, West Cornwall, Falls Village, and North Canaan. The maximum grade is forty feet to the mile, but more than half the length of the road is passed on grades of under twenty-six feet to the mile. The total expenditure, for the construction of the road and appendages, is 1,244,122 dollars 91 cents. This expenditure, for a road of seventy-four miles in length, with an ample outfit of engines and cars, will bear a favourable comparison with any other railroad in the United States, of similar construction.

The capital stock, by the resolutions of the company, and in pursuance of the charter, has been extended to 1500 shares of 100 dollars each.

The whole subscription amounts to	shares.
No payments have been made on	8696
And but partial payments on	shares 195
	334

Making liable to forfeiture 529

And paid in full, and issued 8167

Should the shares liable to forfeiture be sold, and purchased by the company, it will hold for future subscription.

The stock now liable to forfeiture	shares.
And the unsubscribed shares	529
	6304

Making a total of 6833

The cash and bills receivable actually received for stock, are as follows:—

	dollars.	cts.
On 8167 shares, paid in full	816,700	00
On 334 „ in part	7,112	20

Total from capital stock 823,812 20

The board of directors request particular attention to the cost of the road, as stated, being:

	dollars.	cts.
Cost	1,244,122	91
And the amount received from capital stock	823,812	20

As the difference between these two amounts 420,310 71

forms the original debt of the company, and created its numerous embarrassments. This deficiency of capital, and consequent indebtedness, have compelled the company to prosecute its business on the most unfavourable terms; until, at length, it became more than probable that the whole property would be sacrificed to discharge the certified debt, scarcely exceeding in amount one-fifth of the cost of the road and appendages. Hence, also, arose the impression that the business of the company did not meet its expenses; and, because the profits of current business were not adequate, in two years, to reimburse one-fifth of what ought to have been capital, in addition to interest and expenses, that the whole enterprise was visionary, and the shares of no value. This disaster was, however, averted by the energy and confidence of those who, having embarked in the company with full knowledge of its resources and prospects, retained their belief in the intrinsic value of the road. The whole indebtedness of the company, with interest, to the 1st of June, 1844, amounts to 398,726 dollars 36 cents, qualified as follows:—

	dollars.	cts.
1st class—Certified notes, interest at seven per cent.	277,138	97
2nd „ Land claim notes, interest at six per cent.	20,797	34
3rd „ Claims secured by second mortgage, ditto	69,427	89
4th „ Demands with no special security	31,362	16
Total	398,726	26

It will be observed, that a debt of 420,310 dollars 71 cents, bearing interest in part from 1841, and all from 1842, is thus liquidated on the 1st of June, 1844, at 398,726 dollars 26 cents. The receipts from the business of the road have, then, not only paid all current expenses of its management and repairs, and also the completion of many appendages, essential for the extended demands of trade, but have also actually discharged the interest, and reduced the principal.

The following is a statement of the receipts of the road, for a period of five months, in each of the years 1842, 1843, and 1844:—1842, 32,310 dollars 27 cents; 1843, 55,652 dollars 4 cents; 1844, 68,148 dollars 30 cents.

Statistics of the Eastern railroad.—The annual report of the Eastern railroad has been distributed to the stockholders, and will be laid before the legislature of Massachusetts at its next session. From this report, we gather the following facts:—The whole cost of the road, in Massachusetts, has been 2,361,098 dollars. There has been received, from 18,000 shares, 1,800,000 dollars; State scrip, 500,000 dollars; and sundry accounts, 61,098 dollars. The Eastern, in New Hampshire, has cost 482,500 dollars. The trains of the two companies have made 8,583 trips, amounting to 196,097 miles, and conveying 443,403 passengers; and on the Marblehead Branch, 34,531; making a total of 447,934 passengers transported during the past year. The receipts have been, from Marblehead Branch, 3460 dollar., and 293,401 dollars from main line of road. Of the whole receipts, 257,674 dollars were from passengers, 28,393 dollars from freight, 10,068 dollars from mails, and 124 dollars from incidental sources. The expenses have been 103,452 dollars; leaving the net earnings of both roads 193,308 dollars. To this amount, rents of real estate, and Portsmouth Bridge dividends, add 5,969 dollars; making a total of income, 199,278 dollars. The payments have been 25,000 dollars for interest on state scrip, 78,855 dollars for dividends on stock in January, and 79,887 dollars for dividends

payable on and after July 3rd. The sum of payments, 183,742 dollars, when deducted, leaves a balance of 15,535 dollars to profit and loss; which, with profits on sale of state scrip, 806 dollars; Boston depôt estate, 858 dollars; Cunard wharf, 2,500 dollars; East Boston lands, 5864 dollars; and sundry estates, 313 dollars, makes an addition to surplus fund, after paying interest balances of 3132 dollars, to amount of 22,744 dollars. The old surplus on reserved fund was 19,920 dollars; and that account is now increased to 42,664 dollars. The report concludes by stating, as the result of the year's operations, a dividend of seven per cent, and an addition of 22,744 dollars to the surplus fund. The expenses of the company were 7202 dollars less than last year, and 46,012 dollars less than the year before last.

The Portland, Saco (Mobile), and Portsmouth (New Hampshire) railroad company was incorporated March 14, 1837; organised December 25, 1840; renewed November 25, 1845. It is fifty-one miles long, connects with the Eastern by a bridge over the Piscataqua river, at Portsmouth, and with Boston and Maine at South Berwick, thirteen miles east of Portsmouth. For the year ending November 30, 1843, it divided three and a half per cent; and, for the past year, six per cent. Its cost is not definitely settled, but will amount to about 1,200,000 dollars, a little over 23,000 dollars per mile. It is laid with a T rail, fifty-six lbs. to the yard; highest grades, thirty-five feet per mile. Passes through the towns of Keeting, Elliot, South Berwick, North Berwick, Wells, Kennebunk, Saco, Scarborough, to Portland.

Years.	Gross income. dollars. cts.	Net income. dollars. cts.
1843	89,997 08	47,165 98
1844	124,497 39	74,841 25

The number of miles run being severally 102,036 and 117,008, and the expenditure forty-seven cents, and forty-two and a half cents per mile run.

The Eastern railroad, extending from Boston to Portsmouth, New Hampshire, fifty-four miles, was partially opened August 28, 1838, and, for the whole distance, November 9, 1840, and has also a branch of three miles, to Marblehead.

	dollars. cts.	dollars. cts.

Number of miles run, 204,962; number of passengers, 544,994; average cost of carrying a passenger one mile, 1.166 cents; receipt from each company per mile, 3.351 cents.

Boston and Lowell railroad.—The distance from Boston to Lowell, by this road, is twenty-six miles. The total amount of capital paid in is 1,800,000 dollars. The amount of profits divided during the year 1844 was 144,000 dollars, in two dividends, of four per cent each, on a capital of 1,800,000 dollars. The amount of freight during the year has been much greater than in any preceding period, amounting to 151,731 tons. The freight

and passenger tariff has been reduced since the last annual report. It was formerly one dollar for passengers, in first-class cars; it is now, in first-class cars, for passengers, from Boston to Lowell, seventy-five cents; and fifty cents in second-class cars. Merchandise, generally, at one dollar fifty cents per ton; if in cargoes, landed on the railroad wharfs at one dollar twenty-five cents per ton, without any charge for wharfage. Forty-five thousand four hundred and twenty tons were carried over this road for the factories, during the past year; and the company have a special bargain with the Lowell factories. They are charged one dollar twenty-five cents for all cotton, wool, and goods made of those articles, and one dollar per ton for all other articles. The stockholders of the Western Branch railroad, incorporated in 1843, have transferred their rights and privileges to the Boston and Lowell company. This road begins seven miles from the depot of the Lowell and Boston, out of the latter city. The road has a single tract, with a heavy T rail, of fifty-six lbs. to the yard, upon chesnut sleepers, seven feet long, and six inches in depth, two feet seven inches apart, resting upon a bed of clear gravel, two feet deep. The rails are in lengths of eighteen feet, and the joints are secured by a clasp chain of twenty lbs. weight.

The whole cost of the Boston and Lowell railroad, with its depôts, cars, engines, and appurtenances, and about fifty-eight miles of single track, amounts to 1,902,555 dollars 67 cents; of which—

	dollars.	cts.
Land for tracks and land damages	73,909	48
Depôt lands and buildings	276,079	48
Engines and cars	127,238	43
Iron rails, bolts, and chairs	282,833	95
Bridges (sixty-six in number) and culverts	196,831	58
Road, excavation and embankment, trench walls, stone blocks and sleepers, laying rails, branch tracks at Lowell, superintendence, engineering, &c.	910,222	06
Woburn Branch railroad	35,440	68
Total	1,902,555	67

By the directors' report for 1844, it appears that the surplus on hand on the 30th of November, 1844, after paying the dividends of that year, amounts to 18,433 dollars 36 cents, which is the whole surplus remaining undivided, after nine or ten years' operations. The amount on hand in the year 1841, when it was largest, more than half of which was derived from withholding the winter dividend of 1836 (in which year only two per cent was divided), has been absorbed by the necessary expense of taking up and relaying the first track, on which too light a rail had originally been laid, as has been more fully stated in former reports. The cost of this work was 121,558 dollars 84 cents, and is spread over the three years 1841, 1842, 1843.

STATEMENT of Capital paid in at date, charged and credited to construction, and whole Cost of Construction at the end of each Year, from 1835 to 1844, inclusive.

* Advance on 600 shares new stock sold at auction, for account of the corporation.
 * Balance of interest account charged to expenses.

The cost of a share on the 30th of November, 1835, when the first annual settlement of accounts was made, after the opening of the road, including interest, at six per cent on the assessments from the time when they were laid, and deducting the dividend paid for the fraction of that year, amounted to 540 dollars 75 cents, or almost exactly eight per cent on the par value. Since then, in the nine years which have followed, the dividends have averaged 7.1-9 per cent on the par value of the shares.

THE Annexed Table of the Length, Cost, Receipts, Expenditures, &c., &c., of the Railroads in Massachusetts, is compiled for the *Merchants' Magazine*, from Annual Reports to the Legislature of Massachusetts. Deducting the Cost of the Fitchburg Railroad, which was only open to Acton, Twenty-seven Miles, on the 1st of October, 1844, the net Income was 7.11-100ths per cent upon their cost.

* Open to Acton, twenty-seven miles, October 1st, 1844.

† Average

CANALS AND RAILROADS OF NEW YORK.

THE ERIE CANAL.—This great work, by far the most important canal in the United States, extends from the tide waters of the Hudson river, at the city of Albany, to Lake Erie, terminating at the city of Buffalo. Its general course from Albany is a little north of west, passing up the valley of the Mohawk river, which it crosses at the lower aqueduct, then follows the left or north bank of the Mohawk for thirteen miles, which it recrosses at the upper aqueduct; thence pursues the south bank of the above river, through the counties of Schenectady, Montgomery, Herkimer, and Oneida, where it leaves the Mohawk valley, and continues west through the counties of Madison, Onondaga, Cayuga, the north-east angle of Seneca, Wayne, touching Ontario on the north at Port Gibson, Monroe, Orleans, Niagara, and Erie, where it terminates. Its whole length, including the basin at Albany, is 364 miles: passing through several flourishing towns and villages, many of which have sprung into existence since its completion. It is intersected by several lateral canals of much importance, all of them communicating with other navigable waters. At the Cohoes, in the town of Watervliet, it forms a junction with the Champlain canal; at Utica, it connects with the Chenango canal; at the village of Rome, with the Black River canal and Feeder; in the town of Vernon, with the Oneida Lake canal; at the village of Syracuse, with the Oswego canal; at the village of Montezuma, with the Cayuga and Seneca canal: and, at the city of Rochester, with the Genesee Valley canal. From Albany west there is a succession of locks, until what is termed the "long level" is reached, in the town of Frankfort, Herkimer county, elevated 425 feet above the Hudson, extending to Syracuse, a distance of sixty-nine miles and a half, without any intervening lock; from thence the line descends, and then re-ascends until it reaches Rochester, elevated 506 feet, where there is another continued level of sixty-four miles. At Lockport, the canal ascends the mountain ridge, by five double combined locks, each 12.4 feet rise. Nine miles west of Lockport, the canal enters the Tonawanda creek, with which, for a distance of about ten miles, it is identified: at a further distance of twelve miles, this magnificent work unites with Lake Erie. Total rise from the Hudson river to Lake Erie, 560 feet; rise and fall, 692 feet. It was commenced in 1817, and finished in 1825, at a total cost of 10,731,595 dollars.

By an act of the legislature in relation to the Erie canal, passed May 11, 1835, directing the canal commissioners to enlarge and improve the Erie canal, the very expensive project of enlarging this previously great work, was adopted; the want of additional facilities for conducting the increased trade flowing through this channel having become apparent. Considerable progress has been made on this stupendous undertaking, which, when finished, will command the admiration of the civilised world. There was put under contract prior to January, 1839, more than 100 miles of the enlarged canal, including the heavy rock cutting at Lock-

port, with all the mechanical structures thereon, comprising more than fifty double and single locks, besides the five double combined locks at Lockport; the aqueduct over the Genesee river at Rochester; the two aqueducts over the Mohawk river; one over the Schoharie creek, and many others over smaller streams, including culverts, bridges, &c. The estimated cost of all the work for the enlargement of the Erie canal, is 23,284,931 dollars, of which there was put under contract up to 1841, 11,021,932 dollars, on which there has been paid 10,011,146 dollars; leaving a further expenditure of 13,273,784 dollars to be provided for. (See Tables hereafter.) The Enlarged Erie canal, is to be seven feet deep, and seventy feet wide on the surface, with a slope of two feet to one foot in the banks, leaving a width at the bottom of forty-two feet; with double locks eighteen feet wide, and 110 feet long. The present width of the old Erie canal is forty feet on the surface, and twenty-eight feet at the bottom, and four feet deep; the locks are fifteen feet wide, and eighty feet long.

The state legislature has authorised the construction of the following canals, at the time opposite to each one respectively, in the following table. The length of each canal, together with the number of locks and the number of feet of rise and fall, are also appended:—

Total			21,693,010	12
Total revenue of Erie and Champlain canals			1,830,298	25

For the above estimates of the cost of the Erie and Champlain canals, see Canal Commissioners' Report for 1843, Canal Documents, vol. ii., p. 115.*

The Oswego canal, from Salina to Lake Ontario, connects the waters of that Lake with the Erie canal, partly by means of slack water navigation, the expense of which was 525,115 dollars.

Cayuga and Seneca canal from Geneva, on the Seneca lake, to Montezuma, on the Erie canal, was constructed at an expense of 214,000 dollars.

Chemung canal, from the head waters of the Seneca lake to Tioga point, the cost of which with its feeder was estimated, in 1833, at 335,849 dollars.

Crooked Lake canal, from a lake of that name to Seneca lake, cost 136,101 dollars. The Erie and Champlain canals have also navigable feeders.

The Champlain canal connects the Erie with Lake Champlain. The communication is through a grazing, rather than a grain country, fast parting with its forests contiguous to the navigable waters; and, as is before seen, sending to market a surplus annually.

* In 1792, nine years after the close of the Revolutionary war, the Western Company completed a water communication from Schenectady to the falls of the Oswego river, and boats of burden were passed to within twelve miles of Oswego. At Oswego falls there was a portage of a mile, and the navigation was resumed by a smaller class of boats at the foot of the falls to Lake Ontario.

The works of the Western Inland Lock Navigation Company, principally consisted of a series of locks and a canal, at the falls of the Mohawk at Little Falls, a canal, with locks, at Fort Stanwix, from the Mohawk river to Wood Creek (a tributary of Oneida lake and the Oswego river), and a series of locks and dams on Wood Creek.

A boat leaving Schenectady followed the course of the Mohawk river to Fort Stanwix, and passing by the canal at that place into Wood creek and Oneida lake, entered the Oswego river eleven miles south of the falls, and twenty-three miles from Oswego. There was but one portage in the whole distance (at Oswego falls) between Schenectady and Lake Ontario. However imperfect the navigation, as compared with that of the Erie canal, which superseded it, its influence upon the prosperity, the early and rapid settlement of western New York, is incalculable.

Extract from the Report of the Canal Company:—

"The Erie canal, as before stated, originally cost the sum of 7,143,789 dollars 86 cents. When the project of enlarging the Erie canal was first advanced to the public mind, what was understood by the idea of enlarging? When an individual speaks of enlarging his house, he means adding a wing to it, or erecting an additional story, or some similar increase of his accommodations. The idea of incurring an expense greater than the cost of a new house of the same size, would scarcely enter his mind—much less an expense several times greater than the original cost. Had it been at first proposed to build a new canal adjacent to the old one, of the same size, the people would have promptly objected to it, on the ground of the expense, and on the ground that if an additional communication were needed with the far west, a route for it, or for a railroad, would have been sought through some portion of the state, not accommodated with a communication to market. Much more would they have objected, had it been proposed to construct three or more new Erie canals, adjacent and parallel to each other. Experience in the enlargement shows that four or five new Erie canals could have been built, at an expense no greater than the enlargement will require. Thus the Erie canal enlargement, like the construction of the three last-named lateral canals, may be said to have stolen a march upon the public mind, and obtained a high vantage ground by insidious steps. The amount expended thus far on the enlargement, is 13,291,616 dollars (see Comptroller's Report of 1844, p. 6), and no one believes it is more than half accomplished, on the plan undertaken."

Deduct available means on hand, 30th of September.....	1,088,338 40
Balance to be provided for in 5½ years.....	7,140,072 21

One half of the mill tax, hereafter to be applied to the payment of the canal debts, will add to the revenues applicable to canal purposes, 275,000 dollars per annum, which for six years, makes a total of 1,650,000 dollars. The surplus revenues of the canals may yield 3,000,000 dollars for the same period, making a total of 4,650,000 dollars; deducted from 7,669,072 dollars, it leaves a balance of debt unprovided for at the close of the fiscal year, in 1850, of 3,019,072 dollars. If the canal fund realises the amount due from insolvent banks, 575,184 dollars, there would still remain 2,443,887 dollars unprovided for. In the three years succeeding 1850, the amount of canal debt falling due is only 70,000 dollars.

A List of the Places on the Junction and Erie Canals, and their Distance from each other.

PROVISIONS, &c.				STONE, SLATE, &c.							
1	On flour, salted beef and pork, butter, cheese, tallow, lard, beer and cider, per 1000 lbs. per mile.....	0	4	5	18	On slate and tile, for roofing, and stoneware, per 1000 lbs. per mile.....	0	4	5		
2	On bran and ship stuffs, in bulk, per 1000 lbs. per mile.....	0	4	5	19	On all stone, wrought and unwrought, per 1000 lbs. per mile.....	0	2	3		
IRON, MINERALS, ORES, &c.				LUMBER, WOOD, &c.							
3	On salt manufactured in this state, 1000 lbs. per mile.....	0	2	3	20	On timber, squared and round, per 100 cubic feet per mile, if carried in boats.....	0	5	0		
4	On foreign salt, per 1000 lbs. per mile.....	3	0	0	21	On the same, if carried in rafts, (except dock sticks as in next item) per 100 cubic feet per mile.....	1	0	0		
5	1st. On gypsum, the product of this state, per 1000 lbs. per mile.....	0	2	3	22	On round dock sticks, passing in or be separate from every other kind of timber, per 100 cubic feet per mile.....	1	0	0		
	2nd. On foreign gypsum, per 1000 lbs. per mile.....	0	4	5	23	On blocks of timber for paving streets, per 1000 lbs. per mile.....	0	2	0		
6	On brick, sand, lime, clay, earth, leached ashes, manure and iron ore, per 1000 lbs. per mile.....	0	2	3	24	1st. On boards, plank, scantling, and sawed timber, reduced to inch measure, and all siding, lath, and other sawed stuff, less than one inch thick, carried in boats (except such as are enumerated in regulations, numbers 26 and 35), per 1000 feet per mile.....	0	5	0		
7	On pot and pearl ashes, window glass, or glassware manufactured in this state, kelp, charcoal, broken castings, and scrap iron, per 1000 lbs. per mile.....	0	4	5	2nd. On the same, if transported in rafts.....	2	0	0			
And on pig iron the same rate of toll, except when cleared on the Oswego and Champlain canals, and going towards tide water, when it is to be charged per 1000 lbs. per mile.....				0	4	5	25	On mahogany (except veneering), reduced to inch measure, per 1000 feet per mile.....	1	5	0
8	1st. On mineral coal, (except coal to be used as fuel in the manufacture of salt, which shall pass free of toll, going towards tide water, or going north on the Champlain canal, having come from the west, or going west from Utica or from any point west thereof, or going upon any lateral canal; and on anthracite coal going from tide water, per 1000 lbs. per mile.....	0	4	5	26	On sawed lath, of less than ten feet in length, split lath, hump poles, hand-spikes, rowing oars, boom handles, spokes, hubs, tree nails, fellows, buskins, plane stocks, pickets for fences, and stuff manufactured or partly manufactured for chairs and bedsteads, per 1000 lbs. per mile.....	0	2	0		
	2nd. On all other mineral coal than such as above specified, per 1000 lbs. per mile.....	0	4	5	PRESENT RATES ON STAVES.						
9	On stove and all other iron castings, per 1000 lbs. per mile.....	0	4	5	27	On staves and heading, transported in boats, per 1000 lbs. per mile.....	0	1	5		
10	On copperas and manganese going towards tide water, per 1000 lbs. per mile.....	0	4	5	1st. For pipes and hog-heads.....	0	2	0			
11	On bar and pig lead going towards tide water, per 1000 lbs. per mile.....	0	4	5	2d. For barrels.....	0	5	0			
FURS, POULTRY, SWINE, &c.				On the same, if transported in rafts, per 1000 lbs. per mile.....				0	5	0	
12	On furs, poultry (except deer, buffalo, and moose skins), per 1000 lbs. per mile.....	1	0	0	CONSTITUTIONAL RATES.						
13	On deer, buffalo, and moose skins, per 1000 lbs. per mile.....	0	5	0	28	On stave and heading for pipes, per 1000 lbs. per mile.....	1	0	0		
14	On sheep skins, and other raw hides, of domestic animals of the United States, per 1000 lbs. per mile.....	0	4	5	29	On staves and heading for hog-heads, per 1000 lbs. per mile.....	0	7	0		
15	On imported raw hides, of domestic and other animals, per 1000 lbs. per mile.....	0	5	0	30	On staves and heading for barrels or less, per 1000 lbs. per mile.....	0	5	0		
FURNITURE, &c.				On shingles per M. per mile, carried in boats.....				0	1	0	
16	On household furniture, accompanied by, and actually belonging to families emigrating, per 1000 lbs. per mile.....	0	4	5	31	On the same, if conveyed in rafts, per M. per mile.....	0	1	0		
17	On carts, waggons, sleighs, ploughs, and mechanics' tools, necessary for the owners' individual use, when accompanied by the owner, emigrating for the purpose of settlement, per 1000 lbs. per mile.....	0	4	5	32	On split posts (not exceeding ten feet in length), and rails for fencing (not exceeding fourteen feet in length) per M. per mile, carried in boats.....	2	0	0		
		0	4	5	33	On the same, if conveyed in rafts, per M. per mile.....	4	0	0		
		0	4	5	34	On wood for fuel, except such as may be used in the manufacture of salt, which shall be exempt from toll, and tan bark, per cord per mile.....	1	0	0		
		0	4	5	35	On the same, if transported in rafts, per cord per mile.....	2	0	0		
		0	4	5	36	On sawed stuff for window blinds, not exceeding one-fourth of an inch in thickness, and window sashes per 1000 lbs. per mile.....	0	5	0

CANALS AND RAILROADS OF PENNSYLVANIA.

Canals and Railroads constructed by the State.—In 1791, a report was made by a committee of the legislature, recommending the improvement of the Delaware, Lehigh, and Lackawana rivers; a canal from the Schuylkill to the Susquehanna, by way of the Tulpehocken and Swatara; the improvement of the Susquehanna, with its north and west branches, and a connexion by way of the Sinnemahoning between the west branch of Susquehanna and the Alleghany river and Lake Erie. A portage connexion was also proposed from the head waters of the Juniata to those of the Conemaugh, in order to form a communication from the Susquehanna to Pittsburg. As railroads were then unknown, it was proposed to connect the canals by means of good turnpike-roads across the dividing summits.

Nothing was done by the state on the subject of internal improvements until 1824, when an act was passed authorising the governor to appoint three commissioners to explore a route for a canal from Harrisburg to Pittsburg, by the waters of the Juniata and Conemaugh rivers; and also the route for a connexion by way of the west branch of Susquehanna and Sinnemahoning, with the waters of the Alleghany river. An examination of the country between the Schuylkill and Susquehanna, through the great valley of Chester and Lancaster counties, was also directed; together with a route "beginning at a point on the river Schuylkill, in the county of Schuylkill, thence by Mahanoy creek, the river Susquehanna, the Moshannon, Clearfield, and Black Lick creeks, the Conemaugh, Kiskiminetas, and Alleghany river to Pittsburg."

In 1825, an act was passed authorising the appointment of a board of canal commissioners, and directing the following additional surveys to be made: "one from Philadelphia through Chester and Lancaster counties, and thence by the west branch of the Susquehanna and the waters thereof to the Alleghany and Pittsburg; also from the Alleghany to Lake Erie; one other from Philadelphia by the Juniata to Pittsburg, and from thence to Lake Erie; one from the city of Philadelphia to the northern boundary of the state towards the Seneca or Cayuga lake; one through Cumberland and Franklin counties to the Potomac river; and one by the Conococheague, or Monocacy and Conewago to the Susquehanna." A survey was also directed, by the same act, to be made through the county of Bedford, to connect the route of the proposed Chesapeake and Ohio canal with the Juniata route.

By the act of the 25th of February, 1826, the canal commissioners were directed "to locate and put under contract a canal on the east side of the Susquehanna river, from the mouth of the Swatara to a point opposite the mouth of the Juniata; and one from Pittsburg to the mouth of the Kiskiminetas; thus commencing two sections of the main line of communication from Philadelphia to Pittsburg. They were also authorised, as soon as they might deem it practicable

and expedient, to construct a navigable feeder of a canal from French creek to the summit level at Conneaut lake, and to survey and locate a route for a canal from that to Lake Erie."

"In order to sustain the credit of the commonwealth, an internal improvement fund was established (April 1, 1826) under the control of the secretary of the commonwealth, the auditor-general, and the state-treasurer, as commissioners; which fund was specifically appropriated, pledged, and set apart for the purpose of paying the interest and reimbursing the principal of the state debt which might be created in consequence of the construction of the canals and public improvements: the accounts of the fund to be kept separate from the other public accounts." This fund consists of the tolls which were to be received on all the public works, the auction duties, the net proceeds of all escheats, and the dividends on road, canal, and bridge stocks owned by the state. By subsequent enactments, the tax on collateral inheritances, taxes on certain property, and sundry other appropriations were added to the fund.

By the act of April 9, 1827, "the construction of a canal up the Juniata as far as Lewistown; another up the Kiskiminetas and Conemaugh to Blairsville, and one up the Susquehanna to Northumberland were duly authorised." By the same act, "surveys were directed to be made of the route across the Alleghany mountain from Frankstown on the Juniata to Johnstown on the Conemaugh, with a view of determining whether the portage should be by a smooth and permanent road of easy graduation, or by a railway with locomotive and stationary engines or otherwise." Surveys were also ordered between the west branch and the Alleghany river; up the north branch from Northumberland to the state line, and from Pittsburg to Erie by the route of Beaver and Shenango. A survey for a railroad was also directed to be made "from Philadelphia, through Chester and Lancaster counties to the Susquehanna, and also to ascertain the practicability of connecting the north branch of the Susquehanna and Lehigh rivers, by a canal or railway." A survey was, by the same act, directed to be made for extending the canal down the Susquehanna, from the mouth of Swatara to the Maryland line. Operations for the construction of the *French Creek feeder* (to Conneaut lake) was ordered, and surveys directed from Conneaut to Lake Erie. The commissioners were instructed to make a survey for a canal from Philadelphia up the valley of the Delaware to Carpenter's point; "and if found practicable, to locate and contract for the construction of such portion of it as should not exceed the cost of 100,000 dollars, provided that the average expense thereof should not exceed 12,000 dollars per mile."

By the act of the 24th of March, 1828, "the extension of the canals on the Susquehanna, from the mouth of Swatara to Columbia; from Lewistown to Holidaysburg on the Juniata; from Northumberland along the west branch of the Susquehanna to Bald Eagle; from Northumberland to the New York state line, on

the north branch; from Taylor's ferry to Easton, on the Delaware; and from Blairsville to Johnstown on the Conemaugh, were authorised. The Alleghany Portage railroad; the Philadelphia and Columbia railroad was ordered; and preliminary surveys of other lines of proposed improvements were authorised to be executed.

These works were commenced and carried forward with great speed. The credit of the state was then in a highly honourable condition, no one suspected its integrity; money was abundant, and the legislature found no difficulty in borrowing from the capitalists of all countries: especially from England.

Mr. Frego, in an excellent little work on Pennsylvania, observes,—

"This career of lavish expenditure and continual extension was at length checked. The alarming increase of the state debt, the enormous excess in the cost of completing many of the works above the estimates of the engineers, and the failure of the finished lines to support by their tolls the annual charges on them for repairs and expenses, became subjects for serious consideration. Those who had from the first doubted the expediency of undertaking such a gigantic scale of improvement, became decidedly hostile to the further extension of the system, while its warmest advocates were discouraged at the prospect before them. The public voice called for a retrenchment of expenditures, and the operations were prosecuted on a reduced scale. The work on some of the lines was suspended, and was only continued on those which were necessary to complete certain connexions, or those which were deemed likely to afford immediate advantage from completion."

STATE CANALS.—The *Delaware Section of the Pennsylvania canal*, at Bristol; on the River Delaware, twenty miles above Philadelphia, and thence extends up the course of that river to Easton, at the mouth of the Lehigh, where it joins the navigation of the Lehigh company. It is forty feet wide, five feet deep, and has twenty-three locks, ninety feet long by eleven feet wide, from six to ten feet in height; total lockage, 164 feet. Length of canal, sixty miles; cost, 1,374,744 dollars.

The *Eastern section* commences at Columbia, the western termination of the Philadelphia and Columbia railroad, and extends along the eastern bank of the Susquehanna river to Middletown, where the Union canal joins it, where there are locks connecting with the Susquehanna. It then continues along the eastern banks of the Susquehanna, passes through Harrisburg to Duncan's island, near the mouth of the Juniata, where it joins the Juniata section, and also with the Susquehanna division of the state canals. It is forty feet wide at top, twenty-eight at bottom, and has locks ninety feet long, and seventeen feet wide; the total rise is ninety-five feet. Length, forty-three miles.

Juniata section.—At Duncan's island, a dam across the Susquehanna gives the water for the Eastern section. The Juniata section follows the valley of the Juniata to Hollidaysburg, in Huntingdon county, where it joins the eastern termination of the Alleghany Portage railroad. There are seventeen dams on this section, and about sixteen miles of slack water navigation. The canal is of the same dimensions as the Eastern section; the locks are of the same length, and fifteen feet wide. Ascent of lockage, 576 feet; distance, 130 miles.

The *Susquehanna section.*—This canal joins the Juniata section at Duncan's

island, and winds along the western bank of the Susquehanna, up that river to Northumberland, at the junction of the north and west branches, where it unites with the north and west branch divisions. Ascent, eighty-six and a half feet; length, thirty-nine miles.

The *North Branch section* opens at Northumberland, and follows the north branch of the Susquehanna to the mouth of Lackawana, in Luzerne county, above Wilkesbarre. There is a dam across the river at Nanticoke, and the upper end of the canal is supplied with water from the Lackawana. Locks, seventeen feet by ninety feet; total lockage, 112 feet; length, seventy-three miles.

The *North Branch extension* is unfinished; it was intended to communicate with the New York state, by joining the Chenango canal, as a northern outlet for the coal and iron of Pennsylvania, and to obtain back freights of salt and gypsum. From Lackawana, it follows the north branch to Athens, in Bradford county, near the northern line of the state. The cost of work done on this extension up to December 1, 1841, amounted to 2,348,276 dollars; estimated cost of work remaining to be done, 1,298,416 dollars; total estimated cost, 3,646,692 dollars. Length of canal, ninety miles; lockage, 193 feet.

The *West Branch section* is a lateral canal from the Susquehanna section, beginning at Northumberland, and extending up the west branch of the Susquehanna, by Milton, Williamsport, and other places, to the bituminous coal region in the vicinity of Farrandsville.

Two lateral branches from the West Branch section extend, one to Lewisburg, about half a mile, and the other to Bald Eagle creek, near Lock Haven, three miles and a half in length.

The *Sinnemahoning extension* is a continuation of the West Branch canal to the mouth of Sinnemahoning creek, a distance of about thirty-six miles above Farrandsville. It is unfinished, the work being suspended in 1839.

The *Wiconisco canal* is also unfinished. It extends along the east bank of the Susquehanna, from the dam at Clark's ferry, near Duncan's island, to Millersburg, at the mouth of Wiconisco creek, a distance of twelve miles; ascent, thirty-five feet. By the act of July 13, 1842, this canal was transferred to an incorporated company, "reserving the right to the state to reclaim it after twenty years, upon paying to the company the amount expended by them in its completion."

The *Western section*, near Johnstone, the western termination of the Alleghany Portage railroad, the Western section of the canal, opens and continues down the Conemaugh and Kiskiminetas to the River Alleghany; crossing which, near the mouth of Kiskiminetas, this canal winds along the western bank of the river to Alleghany city, opposite Pittsburg, where it crosses an aqueduct, and thence runs through Pittsburg to the Monongahela river. There are ten dams on the route, and upwards of twenty miles of slack water, navigable on

their pools. Below Blairsville, the canal passes through a tunnel 817 feet in length. Descent by lockage, 471 feet; distance, 105 miles.

The *Beaver section* extends from a town of the same name, on the Ohio, up Beaver river to the Shenango, and thence up that stream to the head of slack water navigation, about six miles above Newcastle. Length, thirty-one miles; ascent, 132 feet.

 A little below Newcastle, at the mouth of Mahoning creek, this section is crossed by the Mahoning canal, which extends into Ohio, and at Akron it intersects the Ohio and Erie canal. The Beaver section is only a part of a canal, intended to connect the Ohio river, by way of Conneaut lake, with Lake Erie.

The *Erie extension* is unfinished, it is divided into the *Shenango* section, commences at the head of the Beaver section, above Newcastle, and extends northward to the town of Erie. The ascent from the Shenango pool to the summit at Conneaut lake, is 287 feet; the descent thence to Lake Erie, 510 feet. The level of Conneaut lake is 419 feet above low water in the Ohio, at Beaver, and the surface of Lake Erie, ninety-one feet lower than the Ohio. Length of the Erie extension, 105 miles.

The *French Creek feeder*, is a navigable canal, twenty-seven miles in length, from French creek above Meadville to the Erie extension at Conneaut lake.

The *Franklin line* joins it at the aqueduct, seven miles below Meadville, where the water in the feeder is on a level with Conneaut lake, and gives it an extension to Franklin on the Alleghany river. Descent of lockage, 128 feet; length twenty-two miles.

PENNSYLVANIA STATE RAILROADS.—The *Philadelphia and Columbia railroad* commences at Philadelphia, crosses the Schuylkill by a viaduct about two miles from the city, and follows a western course by Downingtown and Lancaster, to Columbia on the Susquehanna, a distance of eighty-two miles. Here it joins the eastern section of the Pennsylvania canal.

The Schuylkill viaduct for the rails is 984 feet in length, it has also a way for carriages and foot passengers. Immediately west of this, the road ascends by an inclined plane, 2805 feet in length, with a rise of 187 feet, on which cars ascend and descend at the same time, by being attached to an *endless* rope, moved by a stationary engine of sixty-horse power. The railroad then ascends gradually to near the West Chester railroad, about twenty-two miles from Philadelphia, where its height is 543 feet above tide-water. The railroad then descends 293 feet, at a grade of twenty-nine feet to the mile, to the Brandywine viaduct near Downingtown; from thence it again ascends, after crossing the West Brandywine near Coatesville, over the North Valley hill, at Mine Ridge gap, by a grade increased for about three-quarters of a mile, to forty-five feet per mile. From this height the road descends 250 feet into the Lancaster valley, by the city of Lan-

easter, and descends but twenty-five feet, by a route of six miles, to the Susquehanna river, Columbia.

There are several viaducts over the streams crossed by this railroad, particularly those over Valley creek and West Brandywine; the latter is 835 feet in length, and seventy-two feet above the water. Those over the Big and Little Conestoga creeks are 1412 feet and 804 feet long. The highest embankment is eighty feet, and the deepest cuttings from thirty to forty feet. The locomotive engines for the transportation of freight, are capable of drawing upwards of 100 tons each, exclusive of the weight of cars, engine, &c., or nearly 200 tons in all, at an average speed of ten or twelve miles per hour.

The *Alleghany Portage railroad* commences at Hollidaysburg, at the western termination of the Juniata canal, and crosses the Alleghany ridge at Blair's gap; thence it descends to the valley of the Conemaugh, to Johnstown, at the western division of the Pennsylvania canal. There are ten inclined planes on this railroad from Johnstown eastward, and eleven "levels," or graded lines of road, the inclination of which is from ten feet to fifteen feet to the mile, except that between Johnstown and the first plane, which has a grade of about twenty-four feet, between the eastern plane and Hollidaysburg, where the maximum grade is fifty-two feet. Blair's gap is 2325 feet above the level of mean high water of the tide on the Susquehanna; the ascent from Hollidaysburg to the summit, is 1398 feet in ten miles, and the descent to Johnstown 1171 feet in twenty-six miles and a half. There are five inclined planes on each side of the summit; the longest being the third on west of Hollidaysburg, which is 3117 feet in length, with a rise of 307½ feet; and the shortest, the third east of Johnstown, 1480 feet in length, rising 130½ feet.

At the head of each inclined plane, there are two stationary engines of about thirty-five horse power each, which draw up and let down, by the *endless* rope, the cars attached. Four cars, each loaded with a burden of 7000 pounds, can be drawn up at once, and as many let down at the same time, from six to ten times in an hour. On the short levels between the planes, horses are used for drawing the cars.

A viaduct over the Conemaugh, consists of a single arch of eighty feet span, at a height of seventy feet above the water of the stream. Through a ridge near the head of the first plane, east of Johnstown, there is a tunnel, 901 feet in length, twenty feet wide, and nineteen feet high. This railroad is thirty miles and a half long.

The *Gettysburg railroad*, intended to communicate between the Pennsylvania improvements and those of Maryland, from the Baltimore to the Ohio railroad, and also with the Chesapeake and Ohio canal. After expending more than 700,000 dollars, on the eastern end between Gettysburg and the summit of the south mountain, the work was suspended.

PENNSYLVANIA CANALS AND RAILROADS CONSTRUCTED BY COMPANIES.—

The *Lehigh navigation* consists of a succession of canal and slack water navigation constructed by the Lehigh company, numerous dams built across the river form navigable pools, and between these there are canals of various lengths. These works join the Delaware section of the state canal at Easton on the Delaware, and extend up the Lehigh river by Bethlehem and Allentown to Mauch Chunk, at the eastern termination of the great southern anthracite coal basin. The canals are sixty feet wide at the water line, forty-five feet at bottom, and five feet deep; locks 100 feet long and twenty-two feet wide, capable of passing boats carrying more than 100 tons; dams from 300 feet to 564 feet long, and eight feet to nineteen feet and a half high. Distance, forty-six miles and a half, with a rise in lockage of 353 feet.

From Mauch Chunk the navigation is continued up the river to Whitehaven, twenty-four miles and three quarters; and thence to the falls at Stoddartsville, thirteen miles and a half, there is a descent for boats by artificial freshets, chiefly for bringing down lumber. The distance from Mauch Chunk to the northern termination of the works, is thirty-eight miles and a quarter. Ascent, 936 feet. The locks above Mauch Chunk are of the same length as those below, and twenty feet wide; one of them has a lift of thirty feet, and can be filled or emptied in two minutes and a half. On this upper division of the work are twenty dams, from fourteen to thirty-eight feet high, and from 187 to 375 feet long. Total length of the Lehigh navigation, eighty-four miles and a half.

The *Lackawaxen canal* is an extension of the Delaware and Hudson canal into Pennsylvania. It enters the state near the mouth of Lackawaxen, and extends up that stream to Honesdale, in Wayne county, where it connects with a railroad to the Lackawana coal mines at Carbondale. Length, twenty-five miles; lockage rise, 187 feet from the Delaware to Honesdale, which is 870 feet above tide water.

The *Schuylkill navigation* commences at Fair Mount dam, near Philadelphia, and follows the Schuylkill by Norristown and Reading to Port Carbon. It opens a water carriage between the Philadelphia and the Schuylkill coal region. It was commenced in 1815, and completed in 1826. Like the Lehigh navigation, it consists of pools formed across the river, with intervening lines of canal, sometimes on the east and sometimes on the west side of the river, which the canal crosses several times. Near Reading it is intersected by the Union canal, which joins the Susquehanna, and the state canals of the interior. Length of navigation from Philadelphia to Port Carbon, 108 miles, of which fifty-eight is canal and fifty slack water. The longest line of canal on the route is twenty-two miles, called the Girard, the upper end of which is five or six miles below Reading. Width of canal, thirty-six feet at top, twenty-two at bottom, and four feet deep. Locks, eighty feet by seventeen, total ascent, 610 feet.

The *Union canal* passes from the Schuylkill, near Reading, westward up the

valley of Tulpehocken creek, to the summit between the head waters of that stream and those of the Quitapahilla, a branch of the Swatara. It then descends the Swatara to the Susquehanna, near Middletown. A branch, twenty-three miles in length, serves the double purpose of a navigable canal and a feeder, and extends up the Swatara northward to Pine Grove, in Schuylkill county, from which railroads extend to the coal mines. Near the gap by which the Swatara passes through the Blue mountain, a large dam is constructed which forms a pool or reservoir several miles in extent. The feeder on the Swatara being lower than the summit level of the canal near Lebanon, water works have been constructed, which are now aided by steam engines, for the purpose of raising the water, which is conducted in a trunk several miles to the main canal. From the commencement of this canal on the Schuylkill to the summit level, the decline is forty-one miles and a quarter; ascent of lockage, 311 feet. The summit level is seven miles long, and 498½ feet above tide water. From this to the Susquehanna is thirty-three miles and three quarters; descent, 208½ feet. Width of canal, thirty-six feet; depth, four feet. Locks, seventy-five feet by eight feet and a half. Length of canal, eighty-two miles.

The *Susquehanna or Tide-Water canal*, commencing at Wrightsville, opposite Columbia, and continues along the west side of the Susquehanna river to Havre-de-Grace, in Maryland. This canal opens a communication between the eastern division of the Pennsylvania canal and the tide water of Chesapeake bay. Canal, fifty feet wide, five feet deep; locks with double chamber, admitting the passage of two boats at the same time, or of a raft 170 feet long, and sixteen feet wide. Length, forty-five miles; descent, 233 feet.

The *Conestoga navigation* consists of dams and locks, on Conestoga creek, from the city of Lancaster to the Susquehanna river. Locks, 100 feet by twenty-two feet; length of navigation, eighteen miles; descent, sixty-two feet.

The *Codorus navigation*, by dams, locks, and canals on Codorus creek, from the borough of York to the Susquehanna river. Length, eleven miles.

Bald Eagle and Spring Creek navigation, extends from the West Branch State canal, at Lock Haven, in Clinton county, up the Bald Eagle and Spring creeks to Bellefonte, in Centre county. Length, twenty-five miles; nineteen of which are finished. Lockage, 183 feet.

Monongahela Improvement navigation, extending up that river to the Virginia line; unfinished. Length, about forty miles.

Mahoning canal, eight miles of which are in Pennsylvania, extends from the Beaver division of the State canal, near Newcastle, in Mercer county, up the valley of Mahoning river into the state of Ohio, and joins the Ohio and Erie canal at Akron, Ohio. Length, eighty-five miles.

CORPORATED RAILROADS.—There are in the city of Philadelphia and the

incorporated districts adjoining, several short railroads joining or uniting the greater railroads which approach the city in different directions.

The *City railroad* extends along Broad-street from the Columbia railroad, at Vine-street, to the Southwark railroad, at Cedar-street or South-street, one mile; with a branch down Market-street from Broad-street to Third-street, and thence down Third-street and Dock-street to the city warehouses near Dock-street wharf. Length, one mile and a quarter.

The *Southwark railroad* extends from the City railroad at South-street down Broad-street to Prime-street, and thence by the latter to the Delaware above the Navy-yard; nearly two miles. A branch of this road, half a mile in length, extends up Swanson-street to Cedar-street, near the wharf.

The *Northern Liberties and Penn Township railroad* branches off from the Columbia railroad and down Willow-street to the Delaware railroad, joining the Germantown, Norristown, and the Philadelphia and Trenton railroads. Length, one mile and a quarter.

The *Philadelphia and Trenton railroad*, from Philadelphia to Frankford, Holmesburg, Bristol, and Morrisville, opposite Trenton, on the Delaware. Rails across the bridge into Trenton, form a communication with the railroad from Trenton to New York. Length, about twenty-eight miles.

The *Philadelphia and Wilmington railroad* joins the Southwark railroad at Broad-street and Prime-street, in Philadelphia, crosses the Schuylkill by a viaduct, passes through Chester to the state boundary, thence to Wilmington, in Delaware, where it joins the Wilmington and Susquehanna railroad to Baltimore. Length, twenty-seven miles.

The *Philadelphia, Germantown, and Norristown railroad*, seventeen miles in length, along the eastern side of Schuylkill, by Manayunk, to Norristown, in Montgomery county. About three miles from this city, a branch leaves this road and proceeds to Germantown, three miles.

The *West Philadelphia railroad*, extends from the Schuylkill, opposite Philadelphia, north-westward, joining the Columbia railroad about eight miles from the Schuylkill. It is unfinished. The most abrupt grade is nearly fifty-seven feet, the average grade forty-three feet, per mile.

The *Valley railroad* branches from the Philadelphia and Reading railroad on the west side of the Schuylkill, near Norristown, up the valley, to intersect the Philadelphia and Columbia railroad east of Downingtown, about thirty-one miles from the city. Length, twenty miles. Maximum grade, thirty-five feet and three quarters per mile. Road unfinished.

The *West Chester railroad* branches from the Philadelphia and Columbia railroad, twenty-two miles from the city, to West Chester, about ten miles.

The *Philadelphia and Reading railroad*, joins the Columbia railroad, below the inclined plane, on the west side of the Schuylkill, near Philadelphia, extends

up that river to Pottsville, opening a line of communication between Philadelphia and the Schuylkill coal region. The whole line, from Pottsville to Philadelphia, is composed of levels and descending grades, which gives great advantages to the descending transportation. A locomotive engine of eleven tons' weight has conveyed from Reading to the Columbia railroad, near Philadelphia, 101 cars with 423 tons, at an average speed of ten miles the hour. There are three tunnels on this road; one at Flat Rock, eight miles from the city, 960 feet in length; another near Phoenixville, of 1932 feet; and the third near Port Clinton, 1600 feet. Near the second tunnel, about thirty miles from Philadelphia, the road crosses to the east side of the river by a viaduct, 288 feet in length, and twenty-four feet above the water. Length, from the Columbia railroad to Reading, fifty-four miles; from Reading to Pottsville, thirty-six miles. A branch, five miles long, from the Falls of Schuylkill, crosses eastward to the Delaware, at Richmond, about three miles from Philadelphia.

The *Little Schuylkill railroad* extends from Port Clinton, at the junction of the two main branches of Schuylkill above the Blue mountain, up the Little Schuylkill to the Tamaqua coal mines, near the south side of the Broad mountain. Ascent, 406 feet; length, twenty-three miles.

The *Mine Hill and Schuylkill Haven railroad*, extends from Schuylkill Haven, up the west branch of Schuylkill, to the coal mines in the neighbourhood of Mine hill. Length of road and branches, twenty miles.

The *Mount Carbon railroad* commences a mile below Pottsville, passes up Norwegian creek to the commencement of the Danville and Pottsville railroad, and thence extends by branches to several coal mines. Length, seven miles.

The *Schuylkill Valley railroad* commences at Port Carbon, where the Schuylkill navigation terminates, thence up the Schuylkill through the coal region to Tuscarora, ten miles. It has many branches to coal mines, the length of which is twelve or fifteen miles.

The *Mill Creek railroad* from Port Carbon to the mines about Mill creek, four miles, with branches amounting to five miles.

Danville and Pottsville railroad parts from Mount Carbon railroad three miles above Pottsville, crosses the Broad mountain by a summit 1014 feet above the level of the Susquehanna at Sunbury, and then across the valley of Mahanoy creek, and over the ridge between that stream and Shamokin creek, down which to Sunbury on the Susquehanna. On this railroad there is a tunnel 700 feet long, and seven inclined planes: one 1650 feet in length, with an ascent of 315 feet. Chain cables are used on the inclined planes instead of ropes. The eastern section is completed to Girardville, fourteen miles from Pottsville. A tunnel 2500 feet long has been cut through Bear ridge, on the Girard estate, for the purpose of obtaining coal. The western section of the road is completed from Sunbury, twenty-one miles, to the extensive coal mines, a furnace for smelting iron with anthracite, to the far town of Shamokin: length of the rail-

road, forty-four miles and a half. A branch, seven miles, to Danville, on the north branch of the projected Susquehanna.

The *Little Schuylkill and Susquehanna, or Catawissa railroad*, extends from the termination of the Little Schuylkill railroad at Tamaqua, across the ridge dividing the waters of Little Schuylkill and Catawissa creek, thence down the valley of the latter to the town of Catawissa on the north branch of Susquehanna, about thirty-five miles. Unfinished.

It is proposed to extend this road from Catawissa to Williamsport in Lycoming county. A branch, twelve miles in length, extends from this road near the summit north of Tamaqua, down the valley of Quakake, to the Beaver Meadow railroad near the Lehigh.

INCORPORATED RAILWAYS.—The *Mauch Chunk railroad*, from the coal landing at Mauch Chunk to the summit mines. Length, nine miles. Ascent, 936 feet; highest grade, 133 feet per mile. There is also a railroad of five miles and a quarter, from Mauch Chunk to the company's coal mines on Room Run. Ascent, 534 feet.

The *Beaver Meadow railroad*, from Parryville on the Lehigh, six miles below Mauch Chunk, up the river to the mouth of Quakake creek, and thence up that stream to the Beaver Meadow mines. Length, twenty miles.

The *Hazleton railroad*, branches off from the Beaver meadow road and leads to the coal mines near Hazleton. Length, eight miles.

The *Lehigh and Susquehanna railroad*, constructed by the Lehigh Coal and Navigation company, from Whitehaven on the Lehigh to Wilkesbarre on the Susquehanna joins the North Branch canal. It has one tunnel and three inclined planes. Length, nineteen miles and three quarters.

The *Carbondale and Honesdale railroad* joins the Hudson and Delaware canal navigation on the Lackawana. It extends from Honesdale to the coal mines near Carbondale. Length, sixteen miles and a half. The summit on Moosic mountain, at an elevation of 912 feet, is passed by means of inclined planes.

The *Pine Grove railroad* extends from the Union canal navigation at Pine Grove in Schuylkill county, to the coal mines. Length, four miles. The *Lorberry* and *Saratoga* railroads, to other mines in the same region, extend eight miles.

The *Lykens' Valley railroad*, from Millerstown on the Susquehanna, extends along the north side of Berry's mountain to the Wiconisco coal mines at Bear gap, in Dauphin county. Length, sixteen miles.

The *Williamsport and Elmira railroad* is completed from the West Branch canal at Williamsport, up Lycoming creek to Ralston. Length, twenty-five miles. Thence it is intended to extend northward to Elmira in New York, to join the Chemung canal. Projected length, seventy-three miles and a half.

The *Blossburg and Corning railroad*, from the bituminous coal region at Blossburg to the Chemung canal at Corning, New York. Projected length, forty miles; part finished.

The *Harrisburg and Lancaster railroad* branches from the Philadelphia and Columbia railroad near Lancaster, and extends by Mountjoy and Portsmouth to Harrisburg, where it joins the Cumberland Valley railroad. Near Elizabethtown there is a tunnel of 850 feet. Highest grade, forty-two feet to the mile, generally less than thirty-five feet. Length, thirty-six miles.

The *Cumberland Valley railroad* commences at Harrisburg, crosses the Susquehanna, and continues westward by Carlisle, Newville, and Shippensburg to Chambersburg in Franklin county. The bridge by which this road crosses the Susquehanna has the railroad laid upon a flat roof, with carriage ways beneath. Length of road, fifty-two miles. A route for another railroad to join this, and to extend from Chambersburg to Pittsburg, has been surveyed.

The *Franklin railroad* joins the Cumberland Valley railroad at Chambersburg; thence southward by Greencastle to the state boundary, and to Hagerstown in Maryland. Length, about twenty miles. It is projected to continue this road to the Potomac.

The *York and Wrightsville railroad* extends from the western termination of the Philadelphia and Columbia railroad, across the Susquehanna to Wrightsville; thence westward to York, thirteen miles, where it intersects the Baltimore and Susquehanna railroad.

The *Baltimore and Susquehanna railroad* extends southward from York, up the valley of Codorus creek to the Maryland boundary, eighteen miles, and thence to Baltimore. Whole length, fifty-six miles.

The *Turnpike Roads and Bridges* of Pennsylvania are numerous and well made. They have been nearly all constructed by incorporated companies. Mr. Frego observes,

"That few of them have ever yielded dividends equal to the interest on the cost of construction, and most of them little more than sufficient to keep them in repair, yet they should not be considered as an improvident and wasteful expenditure of capital. The advantages resulting to those portions of the state which they connect, and through which they pass, from increased facilities of travelling, and the transportation of produce and merchandise, the additional value which they consequently give to the lands adjacent to them, the easy and direct communication afforded by their means between different sections of the country, previously separated by impassable mountains or impenetrable wilderness, have altogether far exceeded in value the cost of all the turnpikes in Pennsylvania."

The following statement from the "*Monthly Commercial Chronicle*," in *Hunt's Merchants' Magazine*, contains the most accurate information that we have been able to procure. "The state of Pennsylvania, which failed in paying the interest of its debt, has advertised its public works, for the construction of which those debts were contracted, for sale, to take its stock at par in payment. That

stock is nominally at forty cents on the dollar in the market. This being the peculiar position of the debt of the state of Pennsylvania, we will here annex a table of the leading works, with their extent, cost, and aggregate revenue and expenditures for ten years, from 1830 to 1840 inclusive:—”

Cost, Revenue, and Expenditures of the Finished Lines of Pennsylvania Canals and Railroads.

NAME AND DESCRIPTION.	Distance. miles.	Cost. dollars	Revenue. dollars.	Expenditure. dollars.
Eastern division of the Pennsylvania canal. Extends from Columbia to Duncan's island.....	43	1,734,958	1,047,826	672,803
Juniata Division—Extends from Duncan's island to Hollidaysburg.....	130	3,437,234	491,404	592,180
Western division—Extends from Johnstown to Pittsburg.....	143	2,264,887	887,013	609,831
Delaware division—Extends from Bristol to Easton.	60	1,374,274	386,515	628,831
Susquehanna division—Extends from Duncan's island to Northumberland.....	39	867,074	141,750	314,753
North Branch division—Extends from Northumberland to Lackawannock.....	74	1,491,894	63,550	200,624
West Branch division—Extends from Northumberland to Duncasburg.....	77	1,404,570	60,850	333,734
French Creek division—Extends (including the feeder) from Franklin to Conneaut lake.....	45	784,754	47,767	133,670
Beaver division—Extends from Beaver to Newcastle	25	277,754	1,924	14,082
Columbia and Philadelphia railway—Extends from Columbia to Philadelphia.....	82	3,083,702	1,205,110	585,144
Railroad tolls.....	874,319	802,074
Motive power.....	436,552
Locomotives, ropes, &c.....
Alleghany Portage railway—Extends from Hollidaysburg to Johnstown.....	18	178,346	413,504	293,135
Railroad tolls.....	413,480	529,507
Motive power.....	172,226
Locomotives, ropes, &c.....
Total.....	20,633,791	6,191,824	6,204,706

In addition to this, there are the following canals in progress, and nearly completed:—

North Branch extension, from Lackawanna to New York line.....	miles. 50
Erie extension, from Greenville to Erie harbor.....	63
Wiconisco canal, from Duncan's island to Wiconisco creek.....	12
Total miles of canals in progress.....	125

These have cost nearly 10,000,000 dollars, making the total funded debt, with money borrowed to pay interest and other expenses, 36,331,005 dollars. The property of the state is as follows:—

	dollars.	cts.
The value of public improvements, estimated at cost, is.....	29,772,165	33
The state owns bank stock which cost, at par.....	2,108,700	00
The state owns turnpike and bridge stock.....	831,774	00
The state owns railroad stock.....	1,797,548	00
Money due on unpatented lands, estimated at.....	1,000,000	00
Total.....	31,510,187	33

The works may become valuable, but as seen in the above table, in ten years, including a most prosperous season, the expenses exceeded the receipts 512,585 dollars, independent of the interest on the debt contracted for their construction. We have gone thus into details, because it is a novel feature in the money market for an independent state to become bankrupt, and tender its property for sale in payment.

In New Jersey the Delaware, and Morris canal was begun in 1824, and completed in 1836, and cost about 2,500,000 dollars. It extends from Easton, on the

Delaware, to Jersey city, 101 miles. A large amount of coal, from the coal region of Pennsylvania, is transported on it. It has recently been widened at a great expense. The Delaware and Raritan canal extends from New Brunswick, on the Raritan, to Bordentown, on the Delaware, below Trenton, and is forty-three miles in length. It forms part of an important communication between the cities of New York and Philadelphia. Salem canal extends from Salem creek, four miles to Delaware river.

The *NEW JERSEY* *railroads* are more important even than her canals. The Camden and Amboy railroad was incorporated in 1829, and completed in 1832, extending from Camden, on the Delaware, opposite to Philadelphia, to South Amboy, at the mouth of the Raritan, sixty-one miles. The New Jersey railroad was incorporated in 1832, and opened in 1836, extending from Jersey city, through Newark, New Brunswick, and Trenton, to Bordentown, where it forms a junction with the Camden and Amboy road. The Paterson railroad was incorporated in 1831, and completed in 1834, and branches off from the New Jersey railroad at Bergen hill, and extends fifteen miles to Paterson. The Morris and Essex railroad extends from Newark to Morristown, twenty miles. The Elizabethport and Somerville railroad communicates between the two places, twenty-five miles. The Camden and Woodbury railroad extends, from the one place to the other, nine miles.

In *DELAWARE* and *MARYLAND*, the Chesapeake and Delaware canal is the most important internal improvement. It crosses the northern part of the state, commencing at Delaware city (which has only forty houses), forty-six miles below Philadelphia, and extends thirteen miles and a half to Back creek, a navigable branch of Elk river. Being sixty-six feet wide at the surface, and ten feet deep, it is navigable for sloops and steamboats. The Deep Cut in this canal is four miles in length, through a hill ninety feet high. This canal was commenced in 1824, and completed in 1829, at a cost of 2,200,000 dollars. The Newcastle and Frenchtown railroad also forms a connexion between the Delaware and Chesapeake. It extends from Newcastle on the Delaware river, to Frenchtown on Elk river, is sixteen miles and a quarter long, and was finished in 1832, at an expense of 400,000 dollars.

"Two of the greatest works of internal improvement in the United States have been projected and commenced by Maryland. The first is the Chesapeake and Ohio canals, commencing at Georgetown, district of Columbia, and to extend to Cumberland, on the Potomac, and thence by Wills creek and the Youghiogheny and Monongahela rivers to Pittsburg, a distance of 341 miles and a quarter. It would require a tunnel through the Alleghany mountains four miles and eighty yards in length. The whole amount of lockage will be 3215 feet. The estimated cost is 9,347,408 dollars. The state of Maryland has subscribed 3,000,000 dollars, and the United States 1,000,000 dollars, towards the completion of the undertaking. A charter was granted by Virginia in 1824, and confirmed by Maryland and the Congress of the United States in 1825, and the work was commenced in 1828. It has been nearly completed from Georgetown to Cumberland, 185 miles, and has been extended to Alexandria."—*U. S. Gaz.*

"The second great work is the Baltimore and Ohio railroad, designed to extend from Baltimore to Wheeling, on the Ohio, 360 miles. It was incorporated by the

legislature of Maryland, Virginia, and Pennsylvania, in 1827, and commenced July 4th, 1828. The state of Maryland has subscribed to the stock 3,000,000 dollars, and the city of Baltimore 3,000,000 dollars. It is completed from Baltimore to Cumberland. The Washington branch extends thirty miles and a quarter from Potapscow river to Washington. The Baltimore and Port Deposit railroad extends thirty-six miles from Baltimore to Havre de Grace. The Baltimore and Susquehanna railroad extends fifty-six miles from Baltimore to York, Pennsylvania. The Reistertown branch railroad commences six miles from Baltimore, and extends eight miles to Reistertown. The Wilmington and Susquehanna railroad extends from Havre de Grace, thirty-two miles, to Wilmington, Delaware. The Annapolis and Elkridge railroad extends nineteen miles and three-quarters from Washington branch to Annapolis."—*U. S. Gaz.*

Philadelphia, Wilmington, and Baltimore railroad.—From the reports made January 9th, 1843, and January 8th, 1844, it appears that the whole amount of receipts for the year ending the 21st of December, 1842, were 469,858 dollars 4 cents. The whole expenses for the year, ending the same day, were 239,965 dollars 7 cents. The revenue for 1842 was 134,010 dollars 65 cents less than in 1841, and the expenses were less by 102,979 dollars 70 cents. The whole receipts for the year ending the 31st of December, 1843, were 430,434 dollars 47 cents; while the current expenses for the same period were 230,384 dollars 86 cents. It appears, by the last report, that the funded debt of the company amounted to 2,972,887 dollars 16 cents. The president alludes to the adverse circumstances of the company during the past year; but hopes, that from the favourable prospects of the country, the period is approaching when it will receive such substantial assurance of prosperity as will confirm the anticipations of the most sanguine. Of the probability of this, however, no speculations are offered.

—The fifth annual report of the Philadelphia, Wilmington, and Baltimore Railroad company embraces some interesting statements. The gross receipts of the road for 1842 were 386,874 dollars; receipts on the Newcastle and Frenchtown railroad for the same period, 82,983 dollars; joint gross receipts, 469,857 dollars. The largest receipts for passengers, 38,370 dollars, were in the month of May; the largest receipts for freight, 7293 dollars, were in the month of February. The largest gross receipts, in 1841, were 603,863 dollars, being an increase of 134,010 dollars over 1842. Expenses in 1841, 342,940 dollars; expenses in 1842, 239,965 dollars. Decrease in net revenue in 1842, 31,080 dollars. The saving in expense for the last year is a very important matter, and speaks well for the management of the road.

VIRGINIA.—The Dismal Swamp canal connects Chesapeake bay with Albemarle sound, extending from Deep creek to Joyce's creek, twenty-three miles, at a cost of 879,864 dollars. It has branches of eleven miles. The Alexandria canal extends seven miles and a quarter from Georgetown to Alexandria. The James river and Kanawha canal extend 175 miles, from Richmond to Buchanan. The Richmond, Fredericksburg, and Potomac railroad extends seventy-five miles, to Aquia creek. Louisa branch, twenty-five miles from Richmond, proceeds forty-nine miles, to Gordonsville. Richmond and Petersburg railroad, from

Richmond, extends twenty-three miles, to Petersburg. Petersburg and Roanoke railroad extends from Petersburg, fifty-nine miles, to Weldon. Greenville railroad extends from near Hicks, for eighteen miles, to Gaston, North Carolina. City Point railroad extends from Petersburg, twelve miles, to City Point. Chesterfield railroad extends from Coal Mines, thirteen miles and a half, to Richmond. Portsmouth and Roanoke railroad extends from Portsmouth, eight miles, to Weldon, North Carolina. Winchester and Potomac railroad extends from Harper's ferry, thirty-two miles, to Winchester.

NORTH CAROLINA.—The Wilmington and Raleigh railroad extends from Wilmington, 161 miles and a half, to Weldon, on the Roanoke, and connects with the Portsmouth and Roanoke railroad. It was commenced in 1836, and completed in 1840. The Raleigh and Gaston railroad extends from Raleigh, eighty-five miles, to Gaston, on the Roanoke, where it unites with the Petersburg, Greenville, and Roanoke railroads. Northwest canal connects Northwest river, six miles, with the Dismal Swamp canal. Weldon canal extends twelve miles round the falls of the Roanoke. Clubfoot and Harlow canal extends from the head waters of the Clubfoot, one mile and a half, to those of Harlow creek, near Beaufort.—*U. S. Gaz.*—(Various accounts.)

The receipts of the railways for 1843 amounted to 122,108 dollars; expenses, 70,176 dollars; receipts by steamboats, 104,066 dollars; profits on both, 78,006 dollars.—*Official Returns.*

SOUTH CAROLINA has some important works of internal improvement. The Santee canal extends twenty-two miles from Charleston harbour to the Santee river, and was finished in 1802, at a cost of 650,667 dollars. Through this canal and the improvement of the Santee and Congaree rivers, a boatable communication has been opened from Charleston to Columbia. Winyaw canal extends seven miles and a half from Winyaw bay to Kinlock creek, a branch of the Santee river. The navigation of the Catawba river has been improved by five short canals, with an aggregate length of about eleven miles and a half. Saluda canal extends from the head of Saluda shoals to Granby ferry, six miles and a quarter. Besides these, there are three other short canals, to avoid the obstructions of falls or shoals in rivers.

The South Carolina railroad commences at Charleston, and extends 135 miles and three-quarters to Hamburg. This road was commenced in 1830 and completed in 1834, at a cost of 1,750,000 dollars. It has since been sold to the Louisville, Cincinnati, and Charleston Railroad company, for 2,400,000 dollars, paid for in the stock of the latter company. The entire length of this road from Charleston to Cincinnati will be 718 miles. The Branchville and Columbia railroad extends from Branchville, on the South Carolina railroad, sixty-six miles, to Columbia. This is to form a part of the Charleston, Louisville, and Cincinnati railroad.

GEORGIA.—This state has several important works of internal improvement. The Savannah and Ogeechee canal extends sixteen miles, from Savannah to Ogeechee river, completed, in 1829, at an expense of 165,000 dollars. The Brunswick canal extends from tide water on the Altamaha, twelve miles to Brunswick, at a cost of 500,000 dollars.

The Georgia railroad extends from Augusta, 165 miles, to De Kalb county. The Athens branch extends from the Georgia railroad, thirty-three miles, to Athens. Cost of the whole, including the Athens branch, 3,300,000 dollars. The Western and Atlantic railroad continues the Georgia railroad from De Kalb county, 140 miles, to Chattanooga, on Tennessee river, at a cost of 2,130,000 dollars. The Central railroad extends from Savannah, 197 miles, to Macon, estimated to cost 2,300,000 dollars. The Monroe railroad extends from Macon, 101 miles, to Whitehall. The Ocmulgee and Flint river railroad, seventy-six miles in length, is designed to connect the navigable waters of these rivers, so as to form a communication from the Atlantic to the Gulf of Mexico.—(See Public Works of United States hereafter.)

FLORIDA.—A railroad extends from Tallahassee, twenty-two miles, to St Mark's. One also extends from Lake Wicomico, twelve miles, to St Joseph, and another from St. Joseph, thirty miles, to Iola, on the Appalachicola. Several other railroads and canals have been projected.

The Muscle Shoals canal is designed to overcome the obstruction in the Tennessee river. It extends from the head of the falls, thirty-five miles and three-quarters, to Florence, and cost 571,835 dollars. But to extend the work to its completion will cost 1,361,057 dollars. The Huntsville canal extends from Triana on the Tennessee, sixteen miles, to Huntsville.

The Alabama and Florida railroad extends from Pensacola, 156 miles and a half, to Montgomery, and cost 2,500,000 dollars. The Selma and Cahawba railroad is a branch of the Alabama and Florida railroad, extending from Selma, ten miles, to Cahawba.

The Montgomery and Westpoint railroad extends from Montgomery, the northern termination of the Pensacola and Montgomery railroad to Westpoint, at the head of the rapids of the Chattahoochee river, thirty miles above Columbus. It is eighty-seven miles long. The Tuscumbia, Cortland, and Decatur railroad extends from Tuscumbia, forty-four miles, to Decatur. The Wetumpka railroad extends ten miles, and is designed to connect, when completed, the Tennessee and Alabama rivers at Wetumpka.

MISSISSIPPI.—The following works of internal improvement have been undertaken. West Feliciana railroad extends from St Francisville, in Louisiana, on the Mississippi, twenty-seven miles and three-quarters, to Woodville in Mississippi, and cost 500,000 dollars. Vicksburg and Clinton railroad extends from Vicksburg, forty-five miles, to Jackson, the capital of the state, with a branch to

Raymond, six miles and a half. The New Orleans and Nashville railroad will extend through this state. The Mississippi railroad to extend from Natchez, 112 miles, to Jackson, is finished to Malcolm, a distance of forty miles. The Jackson and Brandon railroad is fourteen miles long, and connects these places. The Grand Gulf and Port Gibson railroad is seven miles and a quarter long, connecting the two places. Several other railroads are proposed, which are those from Natchez to Woodville, forty-one miles; from Manchester to Benton, fourteen miles; from Princeton to Deer creek, twenty miles; from Brandon to Mobile, and from Columbus to Aberdeen.

LOUISIANA.—This state has a number of important works of internal improvement. Pontchartrain railroad extends from New Orleans, four miles and a half, to Lake Pontchartrain, at a cost of 450,000 dollars. West Feliciana railroad extends from St. Francisville, twenty miles, to Woodville, Mississippi. New Orleans and Carrollton railroad extends from New Orleans, four miles and a quarter, to Lafayette. Orleans-street railroad, extends from New Orleans, four miles and a quarter, to the Bay of St. John's. The Mexico Gulf railroad, extends from New Orleans east, to Pascagoula sound. The Orleans Bank canal extends from New Orleans, six miles, to Lake Pontchartrain, and cost 1,000,000 dollars. Canal Carondelet extends from New Orleans, one mile and a half, to the Bay of St. John's. Barataria canal extends from New Orleans, eighty-five miles, to Berwick bay. Lake Veret canal extends from Lake Veret, eight miles, to Lafourche river. The New Orleans and Nashville railroad extends eighty miles in this state, and if completed, will be 564 miles in length. It is in progress.

TENNESSEE.—The internal improvements of Tennessee consist of several railroads. Lagrange and Memphis railroad extends from Memphis, on the Mississippi, fifty miles, to Lagrange, in Lafayette county. Somerville branch extends from the main road at Moscow, sixteen miles, to Somerville. The Hiwassee railroad extends from Knoxville, ninety-eight miles and a half, to the Georgia line, where it unites with the Western and Atlantic railroad of Georgia. The New Orleans and Nashville railroad is designed to pass through this state.—(See Railroads of the United States hereafter.)

KENTUCKY.—A short but most important work of internal improvement, is the Louisville and Portland canal, two miles and a half long, around the rapids in the Ohio river at Louisville. It admits steamboats of the largest class, is excavated ten feet deep, in solid limestone, and cost 750,000 dollars. The navigation of Kentucky, Licking, and Green rivers, has been extensively improved by dams and locks. The Lexington and Ohio railroad extends from Lexington to Frankfort, and is intended to be continued to Louisville. Several other railroads have been projected.

MICHIGAN.—The Illinois and Michigan canal is 100 miles in length, sixty feet wide, and six feet deep; it has fifteen locks, each 110 feet in length, and

eighteen feet in width. The canal will be navigable for boats carrying from 100 to 150 tons. Five million dollars have already been expended upon it, and 1,600,000 dollars are required to complete it. It connects the navigable waters of the Illinois river, one of the main tributaries of the Mississippi, with Lake Michigan.

The security offered to the subscribers to the new loan consists of the following property:—

	dollars
The canal itself, which has cost.....	5,000,000
230,170 acres of canal land, valued at ten dollars per acre	2,301,700
Levee in Chicago, valued at.....	3,500,000
.. " " in LaSalle, valued at.....	3,000,000
.. " " in Ottawa, valued at.....	3,500,000
.. " " in LaSalle, valued at.....	3,000,000
.. " " in LaSalle and Des Plaines, valued at.....	300,000
Coal beds and stone quarries, valued at.....	1,000,000
Total value.....	\$20,301,700

ILLINOIS.—The Illinois and Michigan canal extends from Chicago, 106 miles, to near Peru, at the head of steamboat navigation on the Illinois. This distance includes a navigable feeder of four miles, and a few miles of river navigation. It was commenced in 1836, and is estimated to cost 8,654,337 dollars. A railroad extends from Meredesia, fifty-three miles, to Springfield. Coal Mine Bluffs railroad extends from the Mississippi river, six miles, to the coal mine. Besides these, a large system of railroads has been projected, and partly executed, the principal of which is denominated the Central railroad, extending from Cairo, at the junction of the Ohio and Mississippi, and terminating near the south termination of the Illinois and Michigan canal; and thence extending in a north-west direction to Gallena; the whole distance being 457½ miles, at an estimated cost of 3,800,000 dollars. This is designed to be intersected by railroads to the east and west, some of them crossing the state. But none of these works are yet completed.

OHIO.—The Ohio canal extends from Cleveland, on Lake Erie, 307 miles to Portsmouth, on the Ohio. It has a navigable feeder of fourteen miles to Zanesville; one of ten miles to Columbus; and one of nine miles to Lancaster; one to Athens of fifty miles; the Walholding branch of twenty-three miles; the Eastport branch of four miles, and the Dresden of two miles. This great work was begun in 1825, and was finished in 1832, at a cost of 5,000,000 dollars. The Miami canal extends from Cincinnati, 178 miles, to Defiance, where it meets the Wabash and Erie canal. The cost was 3,750,000 dollars. The whole distance to Lake Erie is 265 miles. The Warren canal, a branch of the above, extends from Middletown, twenty miles to Lebanon. The Sandy and Beaver canal is to extend from the Ohio canal, at Bolivar, seventy-six miles, to Ohio river, at the mouth of Little Beaver creek. Cost estimated at 1,500,000 dollars. The Mahoning canal extends from the Ohio canal, at Akron, eighty-eight miles, eight

miles of which are in Pennsylvania, to Beaver river, at a cost of 564,372 dollars. Milan canal extends from Huron, three miles, to Milan, to which steamboats now ascend. The Mad river and Sandusky city railroad extends from Tiffin, thirty-six miles, to Sandusky city. The Ohio railroad extends from Manhattan, forty miles, to Sandusky city.

CANALS and Roads in Ohio

CANALS AND ROADS	Miles	Cost
	Number	dollars
Ohio canal and branch	334	4,681,514
Maumee canal	87	1,137,000
Wabash and Erie canal	80	1,255,000
Maumee extension	145	1,450,000
Hocking canal	50	841,000
Washington canal	45	500,000
Muskegon river canal	81	1,110,000
Pennsylvania and Ohio	86	400,000
Milan	10	15,000
Cincinnati and White Water	45	100,000
Macadamised roads, about	631	860,000
Total	1350	13,992,514

INDIANA.—The greatest works of internal improvement undertaken by this state is the Wabash and Erie canal, which extends from Lafayette on the Wabash, 187 miles, to Lake Erie, at Toledo, on the Maumee bay; eighty-seven miles and a quarter of it being in Ohio, and ninety-nine miles and three quarters in Indiana. The White Water canal extends from Lawrenceburg, thirty miles, to Brookville. This canal, when completed, will connect Cambridge, on the national road, with the Ohio river, the entire length being seventy-six miles, at an estimated cost of 1,400,000 dollars. The central canal is designed to connect the Wabash and Erie canal at Peru, with the Ohio river at Evansville, passing through Indianapolis. The entire length will be 290 miles, and the estimated cost 3,500,000 dollars. Parts of this work have been completed. Terre Haute and Eel river canal will connect Terre Haute, the southern termination of the Wabash and Erie canal, with the central canal in Greene county, at a distance of forty miles and a half, and an estimated expense of 629,631 dollars. This work is not completed. The Madison and Indianapolis railroad extends from Madison, on the Ohio river, ninety-five miles to Indianapolis. It is nearly completed. Several other canals and railroads have been projected.

MICHIGAN has projected and commenced an extensive system of internal improvements. The Central railroad extends from Detroit, forty-four miles, to Ann Arbor, and when completed is designed to extend 194 miles to St. Joseph on Lake Michigan. The Erie and Kalamazoo railroad extends from Toledo, thirty-three miles, to Adrian. This road is designed to be continued until it meets the Central railroad, which it will leave at Kalamazoo and terminate at Allegan. The whole distance from Toledo to Kalamazoo is 183 miles. The Ypsilanti and Tecumseh railroad leaves the Central railroad at Ypsilanti, and

connects with the Erie and Kalamazoo railroad at Tecumseh, twenty-five miles. The Detroit and Pontiac railroad extends from Detroit, twenty-five miles, to Pontiac. Numerous other railroads have been laid out and commenced; and the Clinton and Kalamazoo canal is designed to unite the waters of Lake Michigan and St. Clair. The whole length is 216 miles, and is estimated to cost 2,250,000 dollars.

The state of Wisconsin commenced in 1838, the Portage canal, one mile and a quarter long, to connect the Wisconsin and Fox rivers, which completes a steam-boat navigation from Lake Michigan to the Mississippi. The Milwaukee and Rock river canal, sixty miles in length, to connect Rock river with Lake Michigan, is in progress.

CHAPTER XVI.

INTERNAL TRADE AND NAVIGATION OF THE UNITED STATES OF AMERICA.

THE internal trade of North America has increased to its present enormous extent since the beginning of the present century, from little more than a mere interchange of manufactures for the skins of wild beasts, by those who have proceeded into the western and northern wilderness, in order to carry on the fur trade. Exclusive of this there was little internal navigation, except in carrying up the rivers, in canoes or boats, provisions and other supplies for the wood-cutters, and floating down the timber which they had felled and prepared for the markets of the sea-ports. In the same ratio as the wilderness was explored, and settlements were made, west of the Alleghanys, and on the banks of the great lakes, and of the Mississippi, Ohio, Missouri, and other rivers which drain the great valleys, plain, and mountains of the west, there arose fresh resources, and prospects. Those magnificent wilds possessed all the natural elements which yield, by culture and art, sustenance and wealth to man, and accommodation and prosperity to communities. Labour, skill, implements, and capital, were directed with spirit, and judgment, to the lands, waters, forests, and minerals of those regions. Enterprise and industry opened the means of intercourse between the old and the new settlements: first by common roads, and common river boats; then by canals; and soon after by railroads and steamboats. The consequent increase of population, and of the internal navigation and trade, in less than half a century, has been unparalleled in the history of the world.

One of the most remarkable characteristics of the settlement of America, is the tendency (of which England has been the example more than any other country, except, perhaps, Flanders), of the people to reside in towns. We

believe, however, that this tendency has always kept pace, in all ages, and in all countries, with the extension of trade. For in every case where trade and manufactures have been established, and maintained,—and have increased and prospered, we find that the population and wealth have increased in about the same ratio. The wealth and population of towns have always declined along with the decrease of manufactures and commerce. Among the numerous examples of this fact, we have Venice, Augsburg, and many other once flourishing cities. In all cases of the decline of large prosperous towns,—the rents,—the agriculture,—and the value of the crops, and pastures, of the surrounding rural districts, have diminished, in at least as great a degree, as the decreased trade and riches of the cities. We believe, at the same time, that the population of the great cities of antiquity have been greatly exaggerated in numbers.

David Hume was justly of opinion that no ancient city contained as many inhabitants as London: that was about 800,000, when he wrote. He considered that there were inherent causes which would check a much greater increase of the population: even of the most favourably circumstanced towns. At that time, the means of supply, and of payment, within the bounds of any one place, might possibly justify his conclusion. When Hume wrote, cattle from the Highlands could not be brought to Smithfield in as many days as they now can be brought in as many hours. The smacks which brought salmon were often as many days, during boisterous weather, making their passage to London, as the steamers are now performing, the voyage in the same number of hours. The drover followed the routes, through Scotland and England, with his cattle, where they could best bite up the grass to subsist on. They arrived lean, and were afterwards fattened by the English graziers. Splendid wood or iron steam ships of from 600 to 1000 tons, now bring the cattle fattened on the pastures of the Aberdeenshire Highlands, and on the brows of the Grampians, rapidly and direct, without losing flesh, to the quays of the Thames.

Neither the power-loom, the canal, the steam-engine, nor the railroad, nor the steam-ship, nor the splendid docks of London or Liverpool, were then contemplated by Mr. Hume. It is, therefore, not to be wondered at that he was sceptical as to the population of towns exceeding 800,000.

The first canal in England was begun by the Duke of Bridgewater, in 1760. In 1760, Hargreaves gave us the spinning jenny. Arkwright, soon after, the spinning frame. Crompton, in 1779, combined the two, and called it the *mule*. In 1785, Watt brought the steam-engine to that perfect state, for acting, which made it powerful and profitable. Cartwright then invented the power-loom, but it came only into general use in 1820.

To the Bridgewater canal, and the canals which it originated; to the steam-engine, spinning-jenny, mule, and power-loom; to coal and iron conveniently interstratified for the one to smelt the other; to the coal fields, generally, of the

north, central, and western counties, and of Wales; to the coal and iron of the Clyde; to the salt mines of Cheshire; to the copper and tin mines of Cornwall; to the perseverance and industry of the people; to the enterprise of her manufacturers, and the skill of her artisans; to her geographical position and seaports; to her fisheries, which originated her naval architecture, and her fleets; to the adventurous spirit of her princely merchants; and to the hardy intrepidity of her brave mariners, does Great Britain owe her power and prosperity; her manufacturing and commercial wealth; her ability to pay high taxation and high rents—in despite of monopolies, protective duties, and dear food; in despite of all these *banes to national prosperity; banes to national progress*, which all countries, and none more so than the United States, would act wisely to banish from their legislation.

As to the increase of population, and the inhabited extension of settlement, in the United States, we must refer to the detailed tables which we have given. We shall now briefly view the subject, as bearing on the past, present, and future internal industry and trade of these fertile and extensive regions. From a series of articles on the internal trade of the United States, written by Mr. Scott, of Ohio, in which, although he reasons frequently on the most fallacious principles, he conveys much information, and some curious and not improbable computations, we extract the following passages:—

"In the states of Massachusetts, New York, Pennsylvania, and Ohio, the improvements of the age operated to some extent on their leading towns from 1830 to 1840. Massachusetts had little benefit from canals, railways, or steam power; but her towns felt the beneficent influence of her labour-saving machinery moved by water power, and her improved agriculture and common roads. The increase of her nine principal towns, commencing with Boston and ending with Cambridge, from 1830 to 1840, was 63,373, equal to fifty-three per cent; being more than half the entire increase of the state, which was but 128,000, or less than twenty-one per cent. The increase, leaving out these towns, was but eleven per cent. Of this eleven per cent, great part, if not all, must have been in the towns not included in our list.

"The growth of the towns in the state of New York, during the same period, is mainly due to her canals. That of the fourteen largest, from New York to Seneca, inclusive, was 204,507, or sixty-four and a half per cent; whereas, the increase of the whole state was less than twenty-seven per cent, and of the state, exclusive of these towns, but nineteen per cent. Of this, it is certain, that nearly all is due to the other towns not in the list of the fourteen largest.

"Pennsylvania has canals, railways, and other improvements, that should give a rapid growth to her towns. These works, however, had not time, after their completion, to produce their proper effects, before the crash of her monetary system nearly paralysed every branch of her industry, except agriculture and the coal business. Nine of her largest towns, from Philadelphia to Erie, inclusive, exhibit a gain, from 1830 to 1840, of 84,642, being at the rate of thirty-nine and one-third per cent. This list does not include Pottsville, or any other mining town. The increase of the whole state was but twenty-one and three-quarters per cent.

"Ohio has great natural facilities for trade, in her lake and river coasts; the former having become available only since the opening of the Erie canal, in 1826, and that to little purpose before 1830. She has also canals, which have been constructing and coming gradually into use since 1830. These now amount to about 760 miles. For the last five years, she has also constructed an extent of McAdam roads exceeding any other state.

and amounting to hundreds of miles. Her railways, which are of small extent, have not been in operation long enough to have produced much effect. From this review of the state, it will not be expected to exhibit as great an increase in town population, from 1830 to 1840, as will distinguish it hereafter. The effects of her public improvements, however, will be clearly seen in the following exhibit. Eighteen of her largest towns, and the same number of medium size and average increase, contained, in 1830, 58,310, which had augmented, in 1840, to 138,916 : showing an increase of 138 per cent. The increase of the whole state, during the same period, was sixty-two per cent. The north-west quarter of the state has no towns of any magnitude, and has but begun to be settled. This quarter had but 12,671 inhabitants in 1830, and 92,050, in 1840.

" The increase of the twenty largest towns of the United States, from New York to St. Louis, inclusive, from 1830 to 1840, was fifty-five per cent, while that of the whole country was less than thirty-four per cent. If the slave-holding states were left out, the result of the calculation would be still more favourable to the towns.

" The foregoing facts clearly show the strong tendency of modern improvements to build towns. Our country has just begun its career : but as its progress in population is in a geometrical ratio, and its improvements more rapidly progressive than its population, we are startled at the results to which we are brought, by the application of these principles, to the century into which our inquiry now leads us.

" In 1840, the United States had a population of 17,068,666. Allowing its future increase to be at the rate of thirty-three and one-third per cent, for each succeeding period of ten years, we shall number, in 1940, 303,101,641—Past experience warrants us to expect this great increase. In 1790, our number was 3,927,827. Supposing it to have increased each decade, in the ratio of thirty-three and one-third per cent, it would, in 1840, have amounted to 16,560,256; being more than 500,000 less than our actual number as shown by the census. With 300,000,000 we should have less than 150 to the square mile for our whole territory, and but 220 to the square mile for our organised states and territories. England has 300 to the square mile. It does not, then, seem probable that our progressive increase will be materially checked within the 100 years under consideration. At the end of that period, Canada will probably number at least 20,000,000. If we suppose the portion of our country, east and south of the Apalachian chain of mountains, known as the Atlantic slope, to possess at that time 40,000,000, or near five times its present number, there will be left 260,000,000 for the great central region between the Apalachian and Rocky mountains, and between the Gulf of Mexico and Canada, and for the country west of the Rocky mountains. Allowing the Oregon territory 10,000,000, there will be left 250,000,000 for that portion of the American states lying in the basins of the Mobile, Mississippi, and St. Lawrence. If, to these, we add 20,000,000 for Canada, we have 270,000,000 as the probable number that will inhabit the North American valley at the end of the one hundred years, commencing in 1840. If we suppose one third, or 90,000,000 of this number to reside in the country as cultivators and artisans, there will be 180,000,000 left for the towns—enough to people 360, each containing 500,000. This does not seem so incredible as that the valley of the Nile, scarcely twelve miles broad, should have once, as historians tell us, contained 20,000 cities.

" But, lest 100 years seem too long to be relied on, in a calculation having so many elements, let us see how matters will stand fifty years from 1840, or forty-seven years from this time. The rate of increase we have adopted cannot be objected to as extravagant for this period. In 1890, according to that ratio, our number will be 72,000,000. Of these, 22,000,000 will be a fair allowance for the Atlantic slope. Of the remaining 50,000,000, 2,000,000 may reside west of the Rocky mountains, leaving 48,000,000 for the great valley within the states. If, to these, we add 5,000,000 as the population of Canada, we have an aggregate of 53,000,000 for the North American valley. One-third, or say 18,000,000, being set down as farming labourers and rural artisans, there will remain 35,000,000 for the towns, which might be seventy in number, having each 500,000 of souls. It can scarcely be doubted that, within the forty-seven years, our agriculture will be so improved, as to require less than one-third to furnish food and raw materials for manufacture for the whole population.

CHAPTER XVII.

AMERICAN STEAM NAVIGATION—TRADE OF THE RIVER HUDSON—CANALS AND RAILWAYS.

UNDER the description of New York, will be found an account of the trade of that port. Its importance, however, depends on the trade and navigation of the Hudson, of the canals and railroads which communicate between this river and with the rivers and lakes of the north and west—the statistics of which we have condensed from various official returns, and from various *statements*.

An account of the voyages of the steamship *Utica* against the stream of the Hudson, to Albany, is given as follows, viz:—

	Miles.	Hours	Minutes
Left State Prison Dock, New York	0	2	0
Passed Tompkins	14	4	55
" Coldwell's	44	4	11
" West Point	54	4	25
" Newburgh	60	5	1
" Poughkeepsie	78	5	49
" Catskill	115	7	13
" Hudson	129	7	5
" Albany	150	9	0

Deducting detentions, as stopping for steamboats Troy and Columbia, in expectation of receiving the mayor, and other guests from Albany, and for repairing the blower-engine, seventeen minutes, her running time, from dock to dock, was but seven hours and thirty-three minutes.

In 1840, there were twenty steam-packets and fifty steam tugs, plying regularly between New York and Albany, and the intermediate places on the Hudson.

The vessels belonging to the New Jersey Steam Navigation Company are described as new and splendid ships. They ply from New York to Stonington, from which there is a railway to Boston.

LONG ISLAND SOUND is navigated by magnificent and powerful steam ships, especially the New York and Norwich line, which form a quick and pleasant intercourse between New York and Boston, by means of the steamboats to Norwich, and the railway from the latter to Boston.

Steam ships traverse the American shores from Maine to the mouth of the Mississippi.

The steamboats on the Delaware, Schuylkill, and those plying on the Chesapeake, are generally powerful vessels.

CARRYING TRADE OF THE NEW YORK CANALS.

From the opening of the Erie and Champlain canals to the present time, the interior trade has steadily increased, and it now employs an amount of inland

navigation tonnage larger than that of all the foreign and domestic shipping entering and departing from the city of New York.

The following table of the population and prosperity of the state and city of New York, for fifty years, exhibits the rapid increase of wealth which followed the opening of its inland navigation.

YEARS	Population of the State.	Population of the City.	Real and Personal Estate of the State.	Real and Personal Estate of the City.
	Number.	Number.	dollars.	dollars.
1789	110,112	24,311		
1800	200,704	60,464		
1810	300,444	100,273		
1820	500,000	150,310	281,330,000	77,306,244
1830	694,879	252,510	321,400,000	89,051,000
1840			414,011,000	101,541,000
1850			501,011,000	121,111,000
1860			700,011,000	161,111,000
1870	1,372,804	411,700	1,100,011,000	261,111,000
1880			1,400,011,000	271,111,000
1890			1,500,011,000	281,111,000
1900			1,600,011,000	291,111,000
1910			1,700,011,000	301,111,000
1920			1,800,011,000	311,111,000
1930			1,900,011,000	321,111,000
1940			2,000,011,000	331,111,000
1950			2,100,011,000	341,111,000
1960			2,200,011,000	351,111,000
1970			2,300,011,000	361,111,000
1980			2,400,011,000	371,111,000
1990			2,500,011,000	381,111,000
2000			2,600,011,000	391,111,000

From the commencement of the Erie canal, in 1817, to its completion in 1825, nine years, the increase of population in the city of New York was seventy-four per cent, but the valuation of real and personal estate was only a million more in 1824 than it was in 1816.

The increase of population in the first five years, subsequent to the completion of the Erie canal was twenty-two per cent, and of real and personal estate twenty-four per cent. The increase of population in the fifteen years immediately preceding the completion of the canal, was seventy-two per cent.

Increase of population in fifteen years after the completion of the canal, or from 1825 to 1840, eighty-eight per cent, and of property 149 per cent. The above comparisons are no less remarkable as applied to the population and property of the whole state.

The opening of the Erie canal has advanced the commerce of the upper lakes from comparative insignificance to the foremost rank. Prior to 1818, there were no steamboats on the upper lakes, and the aggregate of American tonnage was 2068 tons. The tonnage owned on the Canada side was inconsiderable.

From 1817 to 1825, there were but three steamboats launched upon the upper lakes. The aggregate tonnage in 1825, including steamboats, was about 2500 tons. In 1840, the aggregate tonnage of steamboats alone exceeded 17,000 tons; and of other craft there was about 18,000 tons. There are about sixty steamboats now employed on the upper lakes, and the number of other vessels is 225.

Business on the New York State Canals.

CLOSING of the Erie Canal, from 1821 to 1841.

In 1821, it closed December 4th.	In 1831, it closed December 12th.
" 1822 " December 5th.	" 1832 " December 12th.
" 1823 " December 13th.	" 1833 " November 25th.
" 1824 " December 18th.	" 1834 " November 26th.
" 1825 " December 28th.	" 1835 " December 29th.
" 1826 " December 12th.	" 1836 " November 29th.
" 1827 " December 17th.	" 1837 " December 16th.
" 1828 " December 1st.	" 1838 " about Dec. 1st.
" 1829 " December 21st.	" 1839 " November 28th.

According to Mr. Pitkin, the whole quantity of property received at Albany, by canals, from the interior, on which freight is charged by the ton, in 1833, amounted to 152,935 tons, of 2000 lbs. each, or 305,870,000 lbs.

The following are enumerated in the collectors' returns for 1833, viz.:—

ARTICLES	Av. Value.	Av. Value.	Av. Value.
731,131 barrels flour	dis. etc.	dis. etc.	dis. etc.
22,967 " ashes	5 50	4,017,731 50	6,571,200 49
13,190 " beef and pork	29 0	458,410 0

RECAPITULATION

Total value of property received at Albany by canal	8,413,820 70
ditto ditto ditto at West Troy, ditto	4,317,823 82
	11,737,644 52

In the above estimate, property that entered the river at Waterford is not included. This would increase the amount to at least 13,000,000 dollars.

The tonnage of the canals, whether in boats or rafts, having reference to its source, naturally falls under five general heads of classification, as follows: 1st, the products of the forest; 2nd, agriculture; 3rd, manufactures; 4th, merchandise; 5th, other articles.

We have prepared, from the reports of the commissioners of 1841, 1842, and 1843, the following table, which exhibits a comparative view of the amount of toll received on each canal, during the season of navigation, in each of those years, as follows:—

CANALS.	1841	1842	1843
	dollars. cts.	dollars. cts.	dollars. cts.
Erie	1,880 114 58	1,808,000 36	1,811,630 38
Champlain	107,398 30	95,557 34	117,544 14
Cayuga	36,093 03	31,227 11	38,544 72
Cayuga and Seneca	19,117 38	16,948 10	21,581 32
Chenango	27,766 56	27,702 05	2,786 42
Crooked Lake	1,378 18	989 49	2,017 31
Chemung	16,194 75	13,015 38	18,818 48
Genesee Falls	19,291 78	13,764 11	9,227 60
Oswego Lake	202 74	102 63	462 62
Seneca River Lower Path	766 80	149 0	814 58
Total	2,081,500 12	1,714,197 34	2,031,882 82

There is an increase in the tolls of 1843, compared with the year 1842, of 332,394 dollars. Of this increase, 209,820 dollars, or sixty-three per cent, is on descending, and 122,574 dollars or thirty-six per cent, is on ascending freight.

The total movements of property on all the canals, for the year of navigation, of 1843, showing the value at the place of shipment, the tons of, and tolls on each article, is given in the following statement:—

Tonn and Value of Articles transported on the Canals, in 1843.

ARTICLES.	Quantity.	Tonn.	Value.	Total.
BOATS.	number.	number.	dollars.	dollars.
Toll at two cents	100	100	200	131,711

Grand total	1,111,011	11,111	1,111,011	1,111

The total tonnage of all the property transported on the New York canals,

ascending and descending, its value and the amount of tolls collected for 1843, was 1,512,430 tons, 76,276,909 dollars value, 2,081,599 dollars tolls.

The whole quantity of wheat and flour, that came to the Hudson river, with the aggregate market value of the same, and the amount of tolls received on all the wheat and flour transported on the canals, for 1843, as follows:—248,780 tons, 10,283,454 dollars value, 731,816 dollars tolls.

The number of tons going upwards from tide-water, in 1843, was as follows viz:—

CLEARED AT	Merchandise	Furniture	Other Articles	TOTAL
	tons.	tons.	tons.	tons.
Albany	4,444	1,888	9,581	17,913
West Troy	6,841	1,801	16,748	25,390
Schenectady	475	251	263	989
Total	11,760	3,940	26,592	42,292

The number of tons coming to tide-water, in 1843, is as follows, viz:—

ARRIVED AT	Five Canal	Champlain Canal	TOTAL
	tons.	tons.	tons.
Albany	53,380	27,431	80,811
West Troy	26,187	14,081	40,268
Watford	—	2,38	2,38
Add the number of tons going from tide-water	832,767	25,474	858,241
Total number of tons ascending and descending	969,360		

One hundred and eighty-seven tons came over the railroad from Schenectady, which is not included in the above.

There is an increase of merchandise going up the canals, of 19,473 tons, and an increase in the quantity of other articles of 828 tons; making a total increase in the ascending quantity, comparing 1842 with 1843, of 20,301 tons.

The tons coming to tide-water have increased 170,235, comparing 1843 with 1842.

The merchandise cleared at Albany, West Troy, and Schenectady, in 1843 (113,686 tons), was left on the several canals in the following proportions, viz:—

CANALES	Tons	CANALES	Tons
Five	71,431	Brought forward	10,431
Champlain	13,112	Rocked Lake	1,446
Oswego	11,887	Chenango	2,883
Cayuga and Seneca	9,099	Genesee Valley	2,896
Chemung	1,347	Total	113,686
Carried forward	106,431		

Large quantities of the products of the western states, pass over the canals of New York, by way of Buffalo, Black Rock, Oswego, &c. The amount for 1843, coming from other states, by way of Buffalo and Black Rock, was as follows:—

YEAR	Products of the West.	Agriculture	Manufactures	Other Articles	TOTAL
	tons.	tons.	tons.	tons.	tons.
1843	31,211	172,758	29,256	2731	235,956

The tonnage of property coming from other states, by way of Oswego, in 1843, was as follows:—

Y E A R.	Products of the Forest.	Agriculture	Manufactures.	Other Articles	TOTAL
	tons.	tons.	tons.	tons.	tons.
1843.....	3864	12,297	31	178	17,870

The number of tons of wheat and flour shipped at Buffalo and Oswego, in 1843, and the total tons of wheat and flour, which arrived at the Hudson river, were as follows:—

Y E A R.	Buffalo.	Black Rock.	Oswego	TOTAL.	Total arrived at Hudson river.
	tons.	tons.	tons.	tons.	tons.
1843.....	140,126	12,881	3358	154,865	248,781

The following is a statement of the quantity of merchandise and furniture going to other states, by the way of Buffalo, in 1843, were:—merchandise, 32,798 tons; furniture, 3613 tons.

The merchandise and furniture passing to other states, by way of Buffalo, during the year 1843, was distributed as follows, viz:—

STATES, &c.	Furniture	Merchandise	STATES, &c.	Furniture	Merchandise
	tons.	tons.		tons.	tons.
Pennsylvania.....	764	79	Brought forward.....	34,364	32849

1841	643,748	351,503	127,840	144,934	213,258	1,511,664
1842	641,007	420,776	98,078	169,416	180,044	1,496,831
1843	687,184	455,597	144,777	170,709	186,377	1,513,491
Total 7 years	4,330,670	4,097,827	819,547	957,929	1,179,913	10,938,084
Yearly average for 8 years	541,334	512,228	102,443	119,741	147,489	1,302,363
Per cent of each class	49.01	43.75	7.64	8.71	11.91	100
Annual average from 1836 to 1841, 5 years	575,000	448,737	96,115	115,124	181,432	1,316,707
Annual average from 1840 to 1843, 4 years	614,111	415,650	112,877	118,142	173,776	1,424,556

The annual average of the tons of the total movement of articles on all the canals, is as follows:—

From 1836 to 1841, 5 years	1,316,707
From 1840 to 1843, 4 years	1,424,556
8 years	1,009,312

The average increase or decrease of each class of articles, which results in the above total increase, is as follows:—

CLASS OF ARTICLES	Decrease.	Increase.
Products of the forest	tons, 777,742	
Agriculture		tons, 471,913
Manufactures		tons, 16,867
Merchandise	tons, 11,008	
Other articles	tons, 242,331	
	79,478	188,760
	79,478	79,478
Increase		109,312

The tolls paid on the "total movement" of articles, and upon boats and passengers annually, from 1837 to 1843, both years inclusive, are as follows:—

YEARS	Boats and Passengers	Products of the Forest	Agriculture	Manufactures	Merchandise	Other Articles	TOTAL
	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.
1837	146,506	211,118	371,041	71,707	380,826	96,449	1,289,437

1842	48,110	21,875	16,731	31,926	118,741

The annual average of the tolls paid on the total movement of articles, and upon boats and passengers, is as follows:—

From 1837 to 1839, YEARS	dollars
1840 to 1842, " "	1,097,917
	1,000,354
Increase	97,563

The increase or decrease in the tolls on each class of articles, &c, which results in the above increase, is as follows:—

CLASS OF ARTICLES	Decrease dollars	Increase dollars
Boats and passengers	21,173	
Products of the forest		10,001
Agriculture		101,507
Manufactures		1,708
Merchandise	16,430	
Other articles		47,787
	37,603	162,003
		32,391
Increase		49,707

In all reports heretofore made by the canal commissioners, showing the tonnage arriving at tide-water in each year, the Champlain canal has never been separated from the Erie canal, so as to show the character and quantity of tonnage coming from each canal.

For the first time, the separation is now made; and the following statements show under general heads, the description and number of tons delivered at West Troy and Albany, in the last nine years, from each canal:—

STATEMENT, showing the Tons of each class of Articles delivered at Albany, from 1833 to 1843, both years inclusive, and coming from the Champlain canal.

YEARS.	Products of the Forest.	Agriculture	Manufactures.	Merchandise	Other Articles	TOTAL
	tons	tons	tons	tons	tons	tons
1833	107,371	164	107	2	1,134	108,778

Average from 1840 to 1843, 4 years	377,215	127,179	18,726	729	41,992	585,841

The annual average of the total number of tons which arrived at the Hudson river, were as follows:—

Y E A R S.	Tons. number.
From 1841 to 1843, four years	799,792
" 1844 to 1848, four years	622,450
Increase	177,342

The average increase or decrease of each class of articles, for the same period, which results in the above total increase, were as follows:—

CLASS OF ARTICLES.	Decrease.	Increase.
Products of the forest	6,000	6000
Agriculture	74,750	108,718
Manufactures	0	6,000
Merchandise	7,500	
Other articles	3,050	
Total	81,300	110,718
Increase		29,418

The per cent of each class of property which came from each canal, in the last ten years, is as follows, viz:—

CLASS OF ARTICLES.	Champlain.	Erie.	TOTAL.
Products of the forest	50 41	41 89	58 97
" Agriculture	2 83	47 91	37 83
Manufactures	1 35	2 42	1 94
Merchandise	0 17	0 11	0 08
Other articles	3 87	0 53	6 16
Total	100 00	100 00	100 00

A reference to the foregoing statements shows that the produce of the forest diminishes, on the average, on both canals; though, on the Erie canal, the tonnage of the forest delivered at tide-water, does not diminish as fast as the tonnage of agriculture from the western states increases.

The Champlain canal is sixty-six miles long, and with Lake Champlain, which is about 150 miles in length, opens an internal navigation of 216 miles. This communication is through a grazing, rather than a grain country. The forests of which, contiguous to the navigable waters, are rapidly disappearing. The agricultural surplus will not materially, if at all, increase; for the largest surplus of agriculture always comes from a comparatively new country, and decreases with the increase of population. The tonnage of the forest will not, of course, increase; for it is plain that in every locality the supply is in an inverse ratio to the demand. Population multiplies, but trees cut down do not soon renew themselves.

That portion of the Erie canal over which the largest volume of tonnage passes, and which, of course, requires the largest capacity, is between Utica and the Hudson river. It is over this portion of the canal that most of the tonnage moves which reaches tide-water.

The course of the lockages between Utica and Albany is furnished by the lockages at Alexander's lock, the first lock west of Schenectady; and which

passes more boats than any other lock on the Erie canal. The lockages in the last nine years have been as follows:—

YEARS	Lockages	YEARS	Lockages
	number		number
1833.....	23,798	1841.....	29,882
1834.....	25,316	1842.....	30,229
1835.....	27,055	1843.....	22,809
1836.....	25,572	1844.....	20,181
1837.....	24,171		

The average of the up tonnage, for the preceding nine years, is, to the down tonnage, about as 1 to 5. As the up tonnage is merchandise, mainly, and the down tonnage is principally the product of the forest and of agriculture, it is not probable that the former will ever equal the latter.

That portion of the Erie canal over which the largest number of boats pass, is also between Utica and Albany. The number of boats which arrived at and departed from Albany and West Troy, during the last eleven years, was as follows:—

YEARS	Boats	YEARS	Boats
	number		number
1833.....	31,620	1841.....	41,881
1834.....	32,448	1842.....	37,143
1835.....	36,560	1843.....	33,782
1836.....	34,180	1844.....	31,840
1837.....	33,982	1845.....	32,872
1838.....	32,120		

Owing to the internal demand of this state for bread-stuffs, consequent upon the increase of population, it is not probable that the delivery, at tide-water, of the surplus of wheat and flour, the growth of this state, will much, if any, exceed that of past years. The increased delivery at tide-water, for the last eight years, has been, and that of future years probably will be, wholly of the growth of western states. And this increased delivery, it should be borne in mind, is not to be proportioned to the capacity of those states to produce, but to the demand for consumption at tide-water, on the Hudson river. This lengthened transportation of the products of agriculture, which pay nearly half the tolls, will thus increase the revenue much beyond the relative increase of the tons arriving at tide-water.

That the increase of delivery of flour and wheat, at tide-water, is the product of western states, is evidenced by the following statement:—

Tons of Flour and Wheat.

FIRST CLEARED.

YEARS.	Product of this State.	Product of Western States.	TOTAL.	Arriving at Tide-water.
	Tons.	Tons.	Tons.	Tons.
1836.....	134,507	25,241	159,748	124,984
1837.....	124,209	31,903	156,112	115,141
1838.....	148,260	60,925	189,185	133,060
1839.....	143,580	64,116	207,696	124,681
1840.....	220,840	99,307	320,147	211,867
1841.....	178,724	129,435	308,159	207,360
1842.....	163,317	124,267	287,584	198,731
1843.....	187,169	137,453	324,622	218,750

The tolls collected at Albany and West Troy, in each of the last ten years,

on merchandise going from tide-water, and at Buffalo and Black Rock, on the products of western states going towards tidewater, is as follows:—

YEARS.	Albany.	West Troy.	TOTAL.	Buffalo.	Black Rock.	TOTAL.
	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.
1834.....	215,811	133,117	348,928	91,294	91,294
1835.....	337,602	131,316	468,918	106,513	106,513
1836.....	369,127	160,248	529,375	158,975	158,975
1837.....	276,653	124,78	401,431	128,270	128,270
1838.....	337,182	184,316	521,498	202,804	202,804
1839.....	313,687	256,580	570,267	214,183	16,778	230,961
1840.....	255,763	185,947	441,710	211,117	51,164	262,281
1841.....	314,032	255,850	569,882	218,588	52,603	271,191
1842.....	243,153	294,415	537,568	214,750	35,436	250,186
1843.....	274,140	299,248	573,388	265,314	38,889	304,203

The following table is given as the result of the canal commissioners' statement. The tolls of the Erie canal, for the last ten years, have been paid as follows:—

Tolls on Agricultural and other Products.

YEARS.	From other States.	From this State.	TOTAL.	On Merchandise.	Total tolls on Erie Canal.
	dollars.	dollars.	dollars.	dollars.	dollars.
1834.....	133,704	68,624	202,328	37,940	1,180,698
1835.....	147,513	743,112	890,625	211,248	1,372,673
1836.....	182,328	258,617	440,945	349,343	1,440,949
1837.....	118,294	387,125	505,419	498,751	1,114,170
1838.....	251,620	614,431	866,051	505,793	1,414,174
1839.....	291,088	581,356	872,444	345,586	1,417,632
1840.....	431,224	180,897	612,121	481,310	1,397,344
1841.....	486,084	294,674	780,758	629,926	1,910,031
1842.....	486,566	618,715	1,105,281	743,808	1,368,947
1843.....	604,113	709,853	1,313,966	760,143	1,880,015
Totals for 10 years.....	3,119,700	5,674,329	8,794,029	5,097,770	14,843,804
.. first 7 years.....	2,921,359	5,376,125	8,297,484	2,880,037	13,880,525
.. second 3 years.....	1,977,346	3,298,204	5,275,550	2,217,733	8,487,279

From the above, it appears that the increase in the last five years is.....	dollars.
That the increase on merchandise is.....	173,096
That the increase on products from western states is.....	1,511,967
Showing a total increase of.....	1,685,063
And that there is a decrease on the products of this state.....	77,926
	1,762,989

It will be understood that these are results of the Erie canal alone, distinct from any other canals.

The increase at Oswego is known to be mostly, if not wholly, on products from western states.

The increase at Oswego, is.....	dollars.
The increase on all the lateral canals, including Oswego, is.....	104,143
	43,621
Thus showing a decrease of.....	60,522
in the last five years in the tolls of the lateral canals, on the "products of this state."	

The results of the foregoing statements, for all the canals, is then as follows:—

	dollars.	dollars.		dollars.	dollars.
Increase on the Erie canal.....	1,730,754		Decrease on products from this state.....		
.. all other canals.....	41,621		On the Erie canal.....	77,926	
Total.....	1,772,375		On all other canals.....	60,522	
Increase on products from western states.....			Total.....	138,448	
By way of Buffalo and Black Rock.....	1,334,967		Leaving a balance of increase on agricultural products, from western states, &c.....		1,300,927
.. Oswego.....	164,113		Increase on merchandise sent from tide-water.....		273,696
Total.....	1,600,180		Total.....		1,574,623

These results show one of two things—either that the agriculture of this state

suffers from a competition with the cheap and fertile lands of the western states, which seek through the Erie canal a market for their surplus productions; or that, as a country penetrated by canals becomes more densely populated, an internal demand grows up for productions which, at an earlier period, were sent to the sea-board. Both propositions may be, and to a certain extent, probably are, true. From the facilities of transportation, the states around the lakes, with lands to be procured at from two to ten dollars per acre, must continue to compete with the lands of New York, until they shall approximate nearly to an equality in value.

Number of Canal Boats.—It has always been a matter of uncertainty how many canal boats were in existence at any one period. The register of boats kept in this department shows some 5000 boats. A conviction that this was much beyond the actual number of boats, led to procure an accurate list.

The number, character, and tonnage of the boats, as shown by the table, are as follows. A column of value has been given, as obtained from an intelligent forwarder:—

DESCRIPTION OF BOATS.	Boats.	Average Tonnage.	Total Tonnage.	Value.
	number.	tons.	tons.	dollars.
Packets.....	10	34	1,320	10,000
Line boats.....	284	34	21,082	38,000
Lake ditto.....	679	34	23,063	35,000
Bull-head ditto.....	118	62	7,310	118,000
Scow boats, decked.....	327	6	19,620	60,000
Ditto, not decked.....	871	6	40,264	60,000
Total.....	2179	90	117,633	1,500,000

Among the reasons for the falling off of the passenger business on the Erie canal, is the continuous line of railroad from Albany to Buffalo. This has changed the construction of boats from the "line-boat" form, which has accommodations for passengers, to the "scow," the "lake," and the "bull-head" form which carry only freight.

The total miles run in each year by all boats, was as follows:—

YEARS	Packets.	Freight Boats.	Total Miles
	number.	number.	number.
1837.....	10,050	5,560,000	5,570,050
1838.....	100,250	6,170,000	6,270,250
1839.....	280,000	5,785,000	5,965,000
1840.....	258,500	5,000,000	5,258,500
1841.....	322,500	7,100,000	7,422,500
1842.....	354,100	6,170,000	6,524,100

The annual average of the last three years, is..... 6,712,000

first..... 6,190,000

Increase..... 522,000

Or equal to an increase of 76.1 per cent per annum

PROPERTY and Value cleared at Albany and Troy, on the Erie and Champlain canals.

The tonnage and value of agriculture in each year was as follows:—

YEARS.	Tons.	Value.	Per cent.
1841	311,182	18,121,947	52.80
1842	243,157	15,062,880	55.70
1843	250,240	16,091,848	70.75

The valuations are those of the prices in Albany, at the time of their arrival.

CHAPTER XVIII.

COMMERCE OF THE AMERICAN LAKES.

BEFORE the conquest of Canada in 1759, the commerce of the lakes was carried on merely on account of the fur trade, and although settlements extended thinly and gradually along their banks after the American revolution, yet the supplying the fur traders with provisions and other articles, and the settlers with necessary goods and implements, and bringing down either to Montreal or New York, furs and such other produce as was collected, constituted the trade until 1830-32. This was especially the state of the trade north and west of Detroit.

In 1819, a steamboat, called *Walk-in-the-Water*, appeared on Lake Erie, made a trip as far as Mackinaw, or Machittinack, to carry up the American Fur Company's goods, and annually repeated the same voyage until she was wrecked near Buffalo, in November, 1821. Her place was then supplied by the steamboat *Superior* (now the *ship Superior*), in 1822. This boat made similar voyages to Mackinaw.

In 1826 and 1827, a steamboat made an excursion with a party of pleasure to Green bay, Lake Michigan. These pleasure excursions were annually made by two or three boats until the year 1832, when the government required the transportation of troops and supplies for the Black Hawk Indian war, and steamboats

were chartered by the government, and proceeded to Chicago, then an open roadstead, exposed to northerly storms, for the whole length of Lake Michigan.

In 1833, there were employed eleven steamboats, which carried to and from Buffalo and other ports on the lakes, during the open season, 61,485 passengers, from whom and for freight the projectors received the sum of 229,212 dollars 69 cents as an offset against the cost of about 300,000 dollars for the steamers.

Of the passengers carried, 42,956 were taken from Buffalo, bound west; the remaining 18,529 passengers were all landed at Buffalo, and distributed at the different ports along the lake.

Three trips were made to the upper lakes, two to Chicago, and one to Green bay; one of the boats left Buffalo on the 23rd of June, at 9 p. m. and returned on the 18th day of July, at 10 p. m. The other left Buffalo the 20th day of July, at 4 p. m., and returned August the 11th.

In 1834, the association was continued, and was composed of eighteen steamboats, which plied on the lake.

In 1836, the steamboat association formed in 1833, was dissolved; the number of steamboats increased, as did the business.

But from a general suspension of specie payments by the banks occurring in May, 1837, a less number, or at least no greater number, of passengers crossed the lakes in either 1837 or 1838, than in 1836; and a great decrease of goods going west, also had a tendency to diminish the business of those years.

In 1839, the owners of steamboats finding the number of boats, and the amount of capital employed in the business, so much greater than the trade could maintain, formed a new association, by which part of the boats were run, and a part laid up.

A regular line of eight boats was formed to run from Buffalo to Chicago, making a trip to Detroit every sixteen days. Emigrants, with their household furniture and farming implements, and others going west, gave these steamboats employment.

In 1840, this steamboat association employed more boats than that of 1839. This year the number of boats on Lake Erie was forty-eight, of various sizes, from 150 to 750 tons' burden, and cost in their construction about 2,200,000 dollars; a part of these boats were run, and a part laid up. The aggregate earnings of the running boats, for passengers and freight carried both ways, amounted to about the sum of 725,523 dollars 44 cents; this amount includes the earnings (estimated) of several boats that did not belong to the association, and added to the amount earned by the associated boats. Eight boats ran regularly this season from Buffalo to Chicago, making sixteen day trips, and one for a time from Mackinaw to Green bay, and occasionally to the Sault Ste. Marie; the aggregate earnings of which amounted to 302,757 dollars 93 cents. Two-thirds of this may be properly considered as business west of Detroit, and is 201,838 dollars 62 cents.

These receipts (with the exception of 12,000 or 14,000 dollars paid by government for the transport of troops) were paid by passengers and freight of merchandise to the different towns on the borders of Lake Michigan, and passengers and produce brought down.

In 1841, the same arrangement was made, and included nearly all the steamboat interest on the lakes. The boats were run in the same manner as in 1840, with this exception, that six boats of the largest class ran from Buffalo to Chicago, making fifteen day trips, and one to Green bay a part of the season, making a trip in fourteen days. These boats have made during this season 525 trips from Buffalo, of which 444 were made on Lake Erie to Toledo, Perrysburgh, River Raisin, and Detroit; and eighty-one to the upper lakes, of which seventy were made to Chicago, and the other eleven to Green bay and the Sault Ste. Marie—and to make these trips, have run between 440,000 and 450,000 miles. In addition to which, a small boat has run daily during the season, from Buffalo to Dunkirk and Barcelona, and occasionally to Erie.

From the increased quantities of agricultural products brought down from the shores of Lake Michigan in 1841, and many tons of lead and shot from the mines in that section of country, now for the first time in any considerable quantity, find a market by Lake Erie; and the great increase of travellers from New Orleans to the northern states, during the hot season of the summer months, having selected this route in consequence of its being more speedy, less expensive, more healthy than the lower route, and affording the traveller a view of the magnificent scenery of the islands and shores of the great lakes; it is estimated that three-fourths of the business done by the Chicago and Green bay boats, in 1841, was carried on by commercial enterprise west of Detroit.

So far as steamboats are concerned, owing to the entire want of safe harbours around Lake Michigan to afford them protection, their whole business is now confined to the western shore of that lake. During the late season in mid-summer, two or three boats made each a trip to St. Joseph's and Michigan city. Milwaukee, Racine, Southport, and Chicago are the places where they have regularly done business.

STATEMENT showing the Number of Ships, Brigs, and Schooners, on Lakes Erie, Michigan, and Superior, together with their Amount of Tonnage and Value, in 1843.

VESSELS.	Number.	Tons. number.	Value. dollars.	To what Port belonging.
Ships	1	560	50,000	Cleveland.

Total steamboats	61	17,324	1,741,200	

In alluding to the progress of the west, and of steam navigation, a Buffalo periodical of 1843, remarks:—

"The present month completes a quarter of a century since the first steamer was launched upon the western lakes. During that period changes of vast magnitude have been effected by the application of the mighty agent, steam. Dense forests, which frowned from the margin of great lakes, have been felled, to give place to thriving villages; and the moody aboriginal occupant, who gazed with wonderment at the approach of the ponderous vehicle, has become extinct, or is known only as a wanderer beyond the limits of the Mississippi. Changes like these have characterised the introduction of steam upon the lakes; and the independent, inquiring spirit, which so distinctly marks the habits of the people of this country, has kept pace with the progress of steam westwardly, and developed the fertility and abounding resources of the prairies, until they have become the granary of the world.

"Of those who early participated in the effort to build up this new commerce, but few remain; still, they have vivid recollections of the undertaking, attended as it was by a heavy outlay and much solicitude for its consummation. To them, if not to those now actively engaged in its prosecution, a list of steamers down to the present season must be interesting, and we have, at no inconsiderable time and trouble, been enabled to make up the table below. Should such be the case, those at the west who have records as authority will make corrections, and call attention in some suitable manner, as we are desirous to obtain such information. The list of steamboats, constructed from the first attempt to navigate Lake Erie by steam, with place and date of building, together with their tonnage, is as follows:—

N A M E.	Tons.	Where built.	When built	N A M E.	Tons.	Where built.	When built

" Besides the above list, there are a few small boats of which nothing is known other than their names. Among these are the Pantanguishane, Cynthia, Pontiac, and Phenomenon, making, with those above given, an aggregate of 27,000 tons, at a total cost of 3,510,000 dollars; 130 dollars a ton being what we deem true data for building and fitting out this description of vessels.

" In examining the progress of steam, as applied in propelling vessels on the lakes, we are struck with the very small number of disasters when compared with other sections of the country, especially in the western waters. In the whole period of twenty-five years there have been but four explosions which might be termed serious. It is true, there are other disasters to record, whose calamitous details are too freshly impressed upon the public mind. The following tabular view presents both these classes:—

EXPLOSIONS	Lives lost. number.	BURNED.	Lives lost. number.
Peacock, September, 1830.....	15	Washington, June, 1838.....	50
Adelaide, June, 1839.....	3	Erie, August, 1841.....	1250
Erie, August, 1840.....	6	Vermilion, November, 1842.....	3
Perry, twice in 1835.....	5	Caroline (withd.).....	5
Total.....	34	Total.....	316

" The incidental disasters, such as collisions, wrecks, &c., are as follows:—Walk-in-the-Water, wrecked in a gale in our offing, November 1, 1821—total loss. Washington (1st), wrecked in a gale, near Long point, in 1833, and one man drowned. She was a splendid new boat, cost 60,000 dollars, and the first season out—totally lost. Delaware, wrecked in a gale, near Chicago, in 1834—totally lost. Crockett, wrecked in a gale, near St. Joseph, in 1834—totally lost. Detroit, ashore near Southport, on Lake Michigan, in 1836—totally lost. Adelaide, ashore in a gale, on Lake Michigan, in 1840—totally lost. Taylor, wrecked, at Michigan city, in 1838—totally lost. The Taylor took fire near the mouth of Cataraugus creek, in the autumn of 1836: at the flames were subdued in time to save the boat. One hand jumped overboard; and was drowned. Don Quixotte, lost in a gale, on Lake Huron, in 1836. Thames, burned by the 'Patriots,' at Windsor, in 1838. Webster, burned to the water's edge while lying up in Buffalo, in 1835. The Great Western was burned, at anchor, in Detroit, in 1839. The Cynthia, a Canadian ferry-boat, was burned, near Malden, in October, 1838. Minnesetunk, sunk by collision with the Erie, near Detroit. She has since been raised, enlarged, and is now known as the Godrich. Little Western, burned at Detroit last season. Macomb, ashore in a gale at the mouth of Detroit river last fall. Niagara, by collision with some other boat, at Huron. Ohio, sunk, at Toledo, in 1837. Little Erie, totally lost in the ice last fall, near Detroit. The Sandusky, consumed by fire while lying up in our harbour, last February.

" Of the old boats which have gradually gone to decay, we note the following:—Chippewa, Henry Clay, Enterprise, and Pioneer, in this harbour; Peacock and Pennsylvania, at Erie; Marcy and Brady, at Detroit; Thompson, at Huron; Newberry, at Miami city; Perseverance, at Monroe; Uncle Sam, at Charlestown; with some of the smaller boats, whose whereabouts are not distinctly known. Many of the larger class of boats, seldom used of late, are laid up in ordinary at the places named:—Webster, Townsend, New York, Star, and Monroe, at this port; Jefferson, at Erie; United States, at Cleveland; Michigan, at Detroit; Milwaukee, at Milwaukee. The Porter is now known as the Toronto, in the service of the Canadian authorities; the Minos is the armed steamer, also in the same employ. The Superior was long since dismantled, and converted into a ship, and is the only vessel of that description now on the lakes; the Julia Palmer having been converted into a steamer, and the Milwaukee lost in the disastrous gale of November last, upon Lake Michigan. The Cincinnati, Jack Downing, Barcelona, and Mazeppa, have also been converted into sail craft. The latter is known as the schooner, General Scott. The St. Clair was originally known as the Saginaw, Rhode Island, &c., of only 160 tons. During the past winter, she was remodelled and enlarged at Detroit, and now rates 250 tons. The Wisconsin was originally 490 tons, but is now being lengthened sixty feet, which will add to her tonnage at least enough to meet the figure given in the table.

" The Caroline, whose destruction filled so large a portion of public notice, was originally known as the Carolina, and believed to have been built at Charleston, South Carolina, at a very early date, as she was rebuilt at Ogdensburg, as given in the table. She was very strongly built, of Norway pine, and copper fastened. After passing down the St. Lawrence, she ran a couple of seasons on the Hudson, when her guards were shipped, so as to admit her through the Erie canal to this city. The date of her destruction is at Schlosser, Niagara county, New York, December 29, 1837.

" The number of boats yet remaining of the whole once in commission on Lake Erie and the other upper lakes, is about sixty, with an aggregate of 17,000 tons. Of these, some thirty-five only are used when the Consolidation is in existence.

" Of the whole number of boats put in commission during the above period, only *ten* were built and owned in Canada.

" The first steamer known to be upon Lake Michigan was the *Henry Clay*. In August, 1827, an excursion of pleasure was made in her to Green bay, where Governor Cass was holding a treaty with the Winnebagoes. After the treaty was concluded, the governor and suite returned in the *Henry Clay*. From that period to 1832, some of the boats went to Green bay, but no farther. On the breaking out of the Black Hawk war, several of the larger boats were chartered by government to convey troops to the disaffected territory; and Chicago, for the first time, was greeted by the sight of one of those strange visitors.

" The building of the propeller *Hercules* is the commencement of a new era in lake navigation, and her owners predict for that description of vessels a large share of the carrying trade, especially upon the upper lakes. The *Hercules* is 275 tons' burden, 135 feet long, twenty-five feet beam, eight feet hold, and put together in the strongest manner. She has fourteen staterooms, six feet square, with sufficient additional space for the erection of forty-six berths more; and, from the peculiar symmetry of the vessel, she will doubtless afford ample accommodations for families emigrating. Her space below, for storage, is large, having almost the entire hull of the vessel appropriated for that purpose. The peculiar feature, however, of the *Hercules* is her engine and its auxiliaries. On examining the machinery, all are struck with the infinite compactness of the steam apparatus and its perfect simplicity, the whole weighing but fifteen tons. The engine is simple and very small, lies close upon the keelson, and fills but a space of six feet square. It is one of Ericson's patent, was made at Auburn, and is computed to be of fifty horse power. We might here remark, that the weight of an engine and boilers for one of our largest steamers is estimated at from sixty to ninety tons, the dead weight of which a propeller escapes carrying. The paddles are made of boiler iron, three-eighths of an inch thick, eighteen inches broad, by thirty inches long, and are placed on two long wrought-iron shafts, protruding from either side of the stern-post. The diameter of the paddles is six feet four inches. From the superb manner in which the *Hercules* is built and fitted out, having cost nearly 20,000 dollars, it is apparent that the Messrs. Hollisters are determined to give the experiment a full and fair trial. Another boat, of the same tonnage, for the same owners, is now being built at Perrysburg, and will be out next month. The Cleveland propeller was launched on the 22nd ult., and the fourth vessel of the kind is rapidly progressing toward completion at Chicago.

" Ten cords of wood, at a cost of seventeen dollars, will suffice the propeller per diem; while one of our largest steamers will consume two cords per hour, at a cost of eighty dollars a day. Some of the steamers even exceed this calculation by thirty-three per cent.

" The aggregate and importance of our lake trade is thus spoken of in a report made during the past season by the committee on commerce to Congress:— 'It appears, that in 1841, there were upon Lake Erie and the upper lakes more than fifty steamers, constructed at a cost of between 2,000,000 and 3,000,000 of dollars; and, among them, some (varying from 600 to 800 tons) which, for strength, sea-worthiness, beauty of model, and elegance of finish, may compare advantageously with any in America; and, notwithstanding the exceeding and continued pecuniary pressure of that year, that their aggregate earnings for freight and for passengers, during the season of navigation, and after accomplishing voyages, amounting collectively, by estimation, to near 450,000 miles, were 767,132 dollars. During the same year, the probable amount of capital invested in *sail vessels*, on the same lakes, was estimated at 1,250,000 dollars, and *their* earnings, during the same season, are estimated at 750,000 dollars. If to these earnings there are to be added 150,000 dollars for freight and toll upon United States products, passed during the same year through the Welland canal, it will be seen that the product of the navigation and commercial business upon these lakes amounts annually to the large sum of 1,700,000 dollars; while, at the same time, it has been productive of the vast advantage of furnishing employment and support to great numbers of sailors, and others connected, of necessity, with the business.

" From the reports of the Topographical Bureau, and other documents, which the committee had access to, it further appears, that during the year 1840, the number of entries and departures of vessels and steamers at Buffalo was 4061; that, during the same year, the number was equally great at Cleveland; and that, of the 2,000,000 bushels of wheat shipped, 896,550 bushels were cleared from that port for Canada or the Welland canal; and that there were, during the same period, and from the same place, 422 clearances of vessels for Canada or the Welland canal. It further appears, by those documents, that dutiable merchandise from New York or elsewhere, to the value of 10,000,000 dollars, was discharged at Cleveland, and destined for the Ohio and Mississippi valleys, passing down the Ohio canal, and for consumption and supply in the state of Ohio.

" The rapidity with which the navigation and commerce of the lakes has thus grown up, constitutes a striking feature in the general subject. With that is connected a consideration of the influence produced upon those interests by the completion of the great lines of communication between the Hudson and Buffalo, by canal and railway; and between the Ohio river, at the mouth

of the Scioto and Lake Erie, at Cleveland, through the Ohio canal. This influence is ably and sufficiently illustrated in the different expositions contained in the reports of the Topographical Bureau; and, if consequences so vast may justly be deduced from the opening of those lines of communication, who can measure the extent of that teeming commerce which will be poured into Lake Michigan, through the canal up the Illinois? and how immeasurably will that commerce be swollen and expanded by the completion, now so nearly accomplished, of the Ohio and Indiana canal, of the Miami and the Walash, which terminates in the Miami bay, and of that canal which is to unite Pittsburg with the lakes at Erie, and of all those other lines of communication by railroad which are respectively in a course of completion?

"Of the actual condition of the commerce of the lakes, some adequate conception, it is believed, can be formed. The secretary of war estimates its annual value at a sum exceeding 20,000,000 dollars."

"In size, model, speed, finish, and general arrangement, these vessels are unsurpassed. The original cost of these vessels varies from 15,000 dollars to 120,000 dollars each. A boat of the largest class requires the services of forty men to manage her, whose salaries are as follows:—

C R E W.	Per Month.	C R E W.	Per Month.
	dollars.		dollars.
Captain	100	First mate	60
Clerk	15	Second mate	30
Steward	15	Chief cook	30
Nine deck hands, each	14	Two assistants, each	20
Eight firemen	20	One female deck	14
Four wheelmen	25	Four waiters, each	12
One engineer	60	Two porters	12
Two assistants, each	30	One carpenter	20

Or, at the farthest, 100 dollars for labour.

"During this period, a steamboat will make four trips to Detroit and back to Buffalo, and consume about 1000 cords of wood at each trip, at a cost of about one dollar eighty-five cents per cord. She will also consume about thirty-three gallons of oil each trip, with an outlay of ten dollars for washing, besides other trifling contingencies.

"Attached to the lake consolidation there are thirty-seven boats, comprising the whole of the large class now afloat on Lake Erie. Between high and low pressure boats there are vast differences in the cost of outfit. The Missouri (high pressure), large class, 610 tons, cost when ready for service, 80,000 dollars. Her engine, horizontal, and one of the most perfect ever put into the hull of a vessel, was purchased at a bargain, and cost at Pittsburg, in June last, 18,000 dollars. An additional 3000 dollars more was paid for its transportation to Erie. Her upholsterer's bill amounted to 4000 dollars. The Cleveland, low pressure, large class, 570 tons, was built and fitted out three years ago, at a time when labour and materials were very high. Her hull cost 22,500 dollars, engine 45,000 dollars, with an additional 5000 dollars for shafts, &c., furnished at Buffalo previous to her going into service. This craft is allowed to have the most happy combination of arrangements of any boat on the western waters, a circumstance most assuredly which gives her such great speed. She consumes three cords of wood every hour, or 150 to Detroit and back to Buffalo, and 600 cords to Chicago. An ordinary high pressure boat will consume about eighty cords to Detroit and back, or 375 to Chicago and back. During the first twelve trips of the Constitution this season to Detroit and back, she consumed 1130 cords of wood, at a cost of one dollar seventy-five cents per cord, amounting to within a fraction of 2000 dollars for fuel.

"When running, the rate of insurance is six or seven per cent. and when lying up, during the winter, only one per cent is charged. Sometimes, however, in very boisterous weather, near the close of the navigation, two per cent a month is charged for policies. These policies are rarely taken out by heavy owners; it is done mostly by persons not engaged in the forwarding business, who own a few shares of stock, and are solicitous for its safety. The great bulk of steamboat stock is uninsured. One of the most prominent features which characterise our lake craft is the elegant style in which they are painted. This is a feature belonging exclusively to Lake Erie. Every traveller that has passed between Buffalo and points west, will acknowledge and award to the artists of Buffalo high commendation for the manner in which they have performed their labour. Four thousand dollars has been paid for the painting, glazing, and ornamenting a single steamboat.

"*Steamboats on Lake Ontario.*—The following lists of steam vessels employed in the navigation of Lake Ontario and the St. Lawrence, include all that have been so employed, from the first use of steam on those waters, and whether built on the United States or the Canadian side. We are indebted for the statement to Mr. John Disturnell. The amount of tonnage propelled by steam, on the Canada side, will be seen to be not far from four times more than the amount belonging to the American side; a difference which though in part accounted for, by the great extent of waters exclusively Canadian, is still, notwithstanding this fact, a greater difference than would, we apprehend, have been generally supposed to exist.

List of American Steamboats, built and running on Lake Ontario, June, 1876. *List of British Steamboats, built and running on Lake Ontario, June, 1876.*

- Broken up.
- Lost in 1842.
- Destroyed by the Patriots in 1848.

"In addition to the above list of British steamboats, of a large class, there are a number of smaller boats and Ericson Propellers, running from Kingston to Montreal, passing down the rapids of the St. Lawrence river, and returning through the Rideau canal. When the Beauharnois canal is completed, vessels of a large class can run direct from Montreal to the Upper Lakes.

The present trade of the inland seas of America, is about *four times* the amount of the export and import trade in 1775, of the thirteen old colonies.

	£	dollars.
In 1915 { Exports, average for six years	1,772,112	7,275,050
Imports ditto	2,732,036	12,130,295
Total	4,504,148	19,405,345

	dollars
In 1941 { Exports	3,114,581
Imports	31,483,141
Total	34,597,722

In 1836, the aggregate of the export and import trade on the lakes was only 16,416,354 dollars. Increase in 1841, 49,364,608 dollars—or nearly *fifty millions* in five years! In 1845, estimated at \$5,000,000 dollars.

In 1819, there was but one steamboat on the lakes.

In 1827, a steamboat made an excursion to Green bay.

In 1832, a boat reached Chicago with troops.

In 1833, there were eleven boats on the lakes, which cost 360,000 dollars.

and carried that year 61,480 passengers ; and with the freight the receipts were 220,212 dollars 69 cents. This season three trips were made to Chicago, and one to Green bay ; the amount of receipts was 4335 dollars 39 cents. The time of running from Buffalo and returning averaged twenty-two days.

In 1834, seven new boats came out, which made eighteen in service for the year. Total cost, 500,000 dollars. The earnings of the boats this year were 238,565 dollars 95 cents. Two trips were made to Green bay, and three to Chicago; and the amount received for them was 6273 dollars 65 cents.

In 1839, eight steamboats ran from Buffalo to Chicago.

In 1840, the number of boats on the lakes increased to forty-eight, and the cost of them was 2,200,000 dollars. The earnings 725,523 dollars 44 cents, 200,000 dollars of which were earnings west of Detroit.

In 1841, 525 trips were made from Buffalo to Detroit; eighty-one to the upper lakes, of which seventy were to Chicago, and ten to Green bay. Earnings of all the boats, 767,123 dollars 27 cents. The upper lake boats contributed 301,803 dollars 39 cents. In 1841, the number of sailing vessels was estimated at 550, varying in size from 30 to 350 tons, cost 1,250,000 dollars, earnings at 750,000 dollars. The earnings of British vessels on the lakes were estimated at 150,000 dollars. The total earnings, 1,667,132 dollars.

Lake Tonnage.—According to the secretary of the treasury's report, the enrolled and licensed tonnage in 1841, at the various districts on the lakes, was—

"The large imports of merchandise, in some former years, were concomitant with extended bank loans—a means by which the credits were unduly sustained, and sales of goods prolonged in excess of the means of payment. This took place during that season of speculation which pervaded all sections of the union, and was a necessary consequence of that all-judged multiplication of banks created to supply a supposed want, induced by the anticipated expiration of the charter of the late national bank."—*Hunt's Magazine*.

"The quantity of merchandise imported into Ohio, in 1844, was sixty per cent of the quantity imported in 1839, when the loans of the banks had been running near their highest points. At the same time, the exports of produce have largely increased. The value of the imported merchandise is officially estimated at 300 dollars per 1000 lbs.; consequently, the import of 1839, was worth 10,462,500 dollars, and that of 1844, 6,252,300 dollars; a reduction of 4,210,200 dollars. At the same time, an increase of exports took place, calculating the quantities at present prices, as follows:—

ARTICLES.	Quantity.	Value.
		dollars.
Wool.....lbs.	806,002	448,310
Pork.....barrels	12,000	420,000
Lard.....lbs.	6,016,338	449,000
Coal.....bushels	105,421	205,712
Wheat.....do.	718,000	718,000
Total increase, five articles.....		1,229,022

"This makes a difference of 6,439,856 dollars more, in the year's business of 1844, in favour of Ohio, than that of 1839.

591 barrels of beans.....	1,290	611 barrels of plaster, ground.....	1,266
Carried forward.....	775,103	Total value.....	775,103

Besides these shipments, there were 132½ tons of sundries, of which no valuation was computed. Of imports, there were, in gross, 3812 tons of merchandise taken in store, intended for the traders of Sandusky, and for a wide extent of interior country. Also, 19,337 barrels of salt, for consumption in the packing establishments in the town, and for the supply of the country; besides lumber to a large amount, the quantity not known. This statement includes only the business of the town of Sandusky.

"There are upon Sandusky bay and its tributaries, three other points of business importance, to wit: Venice, situated three miles above Sandusky, at which the manufacturing of flour is largely carried on; Portage, situated twelve miles up the bay, near extensive beds of gypsum, which is manufactured by steam power, and annually shipped to the extent of several thousand barrels; and Lower Sandusky, situated at the head of navigation on the Sandusky river, thirty-six miles from the mouth of the bay. The latter town is the seat of justice of Sandusky county, enjoying a considerable hydraulic power, and trading with an extensive and growing portion of the country."—*Hunt's Magazine*.

IMPORTS AND EXPORTS OF SANDUSKY, HURON, AND MILAN.

A writer in *Hunt's Magazine* (1844), says:—

"I can predict, with safety, a very large increase of produce shipped from this port, after the completion of another railroad, now rapidly progressing (fifty-six miles long), terminating in the heart of the richest wheat-growing country in the state (Richland). This road cut off Milan from the best trade she is now enjoying. It will be completed in eighteen months."

STATEMENT of Exports from the Port of Sandusky, for the year 1843.

SHIPPING OWNED IN THE STATE OF MICHIGAN.

In 1819 the shipping owned in the territory was about 600 tons.

From 1830 to the present time, we find the following aggregate tonnage registered as belonging to the Detroit district:—

YEARS.	Tons.	YEARS.	Tons.
1830.....	995	1836.....	5,604
1831.....	1105	1837.....	6,504
1832.....	2740	1838.....	
1833.....	2575	1839.....	
1834.....	4009	1840.....	11,202

In 1817, there were imported into Detroit—

5501 barrels of flour.	888 barrels of pork.
1948 " whiskey.	693 firkins of butter.
255 " fish.	1042 head of beef cattle.
5062 bushels of corn.	1435 fat hogs.
2843 barrels of salt.	

There were exported the same year, to military stations on Lakes Huron and Michigan—

2024 barrels of flour.	1282 barrels of salt.
753 " cider.	103 " pork.
394 " beef.	457 " whiskey.
151 firkins of butter	1286 bushels of corn.

1840.....	109,890 barrels.
1841.....	314,680 "
1842.....	294,515 bushels wheat.

Pork.—In 1836, Michigan imported from Ohio, 34,000 barrels of pork, at an average price of twenty dollars per barrel. Total cost 680,000 dollars. In 1837, the census was taken, and the number of hogs, then in the state, was 109,096. The census of 1840 gave 342,920, being an increase in two years of 232,534, or about 100,000 a year. It is a fair estimate, that at the commencement of slaughtering in 1842, there were 700,000 *grunters* in the state.

EXPORTS from the Port of Detroit, in 1842.

LAKE SUPERIOR COPPER COMPANY.

The region bordering on Lake Superior abounds in various kinds of mineral wealth; but it is only recently that any systematic efforts have been made to develop its hidden treasures. "A large tract of country," it is stated in the *Detroit Advertiser*, embracing the mineral district, was purchased by the government from the Indians, in 1842; and the government at once adopted the policy of granting leases to practical miners, of such portions as they should select for their mining operations. That tract, thus selected, is termed a location, and embraces three miles square, or nine square miles of land; and the proprietor of the lease enjoys the exclusive possession of it for nine years, upon paying to the government six per cent of the mineral, by way of rent. The company above named was formed last winter, and the stock is owned by gentlemen in Boston, Washington, St. Louis, and Detroit. They have obtained leases for fifteen such locations, said to be well selected, and rich in copper ore, and are now actively engaged in prosecuting their business. Their head-quarters are at Eagle harbour, on Point Keweenaw. About twenty Cornish miners, under the superintendence of C. A. Gratiot, of Mineral point, are now digging the ore; but the company do not intend commencing the smelting process until next spring. Mr. C. C. Douglas, late assistant to Dr. Houghton, has been engaged by the company as their geologist.—(See *Fisheries of America, for Fisheries of the Lakes.*)

A statement of the tons and different classes of property coming from other states, and shipped at Buffalo, Black Rock, and Oswego, during last nine years, is as follows:—

The commerce of the north-west, great as it is, and rapidly increasing, absorbs comparatively a small portion of the agricultural production of the entire west. The numerous states bordering the Mississippi, and which possess free channels of navigation to that river, pour a great proportion of their products down through that channel to New Orleans, whence they are shipped to the various parts of the world.—(See *New Orleans*.)

IMPORTS at the Port of Buffalo to the 1st of July, each Year.

Commerce of Oswego, 1840.—The registered tonnage of vessels owned at Oswego, in 1840, is 8346 tons, and the number of entrances and clearances of American vessels, being generally schooners of large class, is 1822. There were received at Oswego, during the past year, 764,657

bushels of wheat; of which, 672,790 bushels have been manufactured at the Oswego mills, and the residue been exported to the north, or gone east by canal. There were manufactured there, in 1840, 145,000 barrels of flour, 35,000 of which were exported to Canada, and the residue sent down the canal, or consumed at home. Of salt, 205,000 barrels were received at that port by the Oswego canal, from the Onondaga works; of which, 153,538 barrels were shipped to the upper lakes; 42,000 barrels were exported to Canadian ports, on Lake Ontario and the river St. Lawrence; and 14,544 barrels went to a domestic market, excepting a small quantity that remains on hand. A large quantity of agricultural and domestic products have been received there from the north; among which, 7315 barrels of ashes, and nearly 4,000,000 lbs. of butter and cheese, have cleared for an eastern market by the canal. The tolls collected at the Oswego office for 1840 are 51,899 dollars twenty-three cents, to which the Oswego mills have contributed, in tolls on flour and ship stuffs, 21,943 dollars eleven cents, notwithstanding the large northern export of 35,477 barrels that went to market by the St. Lawrence. From the 1st of September to the close of the season, 100,000 barrels of flour were turned out at the Oswego mills, showing that they have ample power to manufacture 1,000,000 barrels during a season, if the market and profits would justify so large a business. 'On the whole,' says the *Herald*, 'our commercial men have done an active, and, we believe, profitable business, with tolerably good prospects ahead for an active trade in the spring. The country is full of produce, and contracts are making by purchasers and forwarders. A large number of first-class vessels, and several steamboats, are being built for the business of the ensuing season. Two fine vessels and a steamboat are building at Oswego, which will be ready for the spring trade. The American produce that went to the Montreal and Quebec markets, during the past season, amounts to two millions of dollars, and the 1400 sail of square-rigged vessels that cleared from those ports during the same period, furnish some evidence of the growing Canadian trade. Stimulated and encouraged by the success that has hitherto rewarded their enterprise, our neighbours across the lake are on the alert, preparing, with ample means and increased capital, to compete for the products of the western states, and to divert the current of trade down the St. Lawrence.' This occurred before the passing of the Canada Corn Bill."

TRADE BETWEEN THE COUNTRIES OF THE UNITED STATES, BORDERING THE LAKES AND THE CANADAS.

The increased trade of Canada is, to a great extent, owing to the intercourse either by legal or by contraband trade, with the United States. The resources and population of the Canadas alone are, however, sufficient for a very important amount of navigation and commerce.

The population of Lower Canada, by the census of 1844, amounted to 678,590. In 1831, the number was 511,919; increase, 166,671. The population of Upper Canada may be estimated, at the end of 1845, at 575,000, and of Lower Canada at 695,000:—total, 1,270,000 inhabitants.

In nine years, the tolls on the Welland canal rose from 4300*l.* to 23,946*l.*; and in three years the sums collected for tolls on the macadamised roads rose from 1638*l.* to 6829*l.* Great as is the commerce of the United States with England, the tonnage required to carry it on is less than that engaged in the lake commerce with Canada.

STATEMENT of the Quantity of Flour, Wheat, Peas, Pork, Lard, and Butter, Exported from Canada in each Year, from 1835 to 1844:—

The value of imports into Lower Canada, in 1840, amounted to 1,903,043*l*. ; the value of exports to 1,625,685*l*., of which the value of timber was 952,826*l*.

In 1842, the duty on British American timber was reduced from 10*s*. to 1*s*. per load; on foreign timber, from 55*s*. to 30*s*. ; and in 1843, to 25*s*. per load. This change was predicted by the timber merchants in the North American trade to ruin Canada.

The exports of timber, in 1840, consisted of pine timber 382,287 tons ; oak, 36,790 tons ; elm, 44,696 tons ; ash, beech, &c., 5404 tons ; staves, number, 71,594,477 ; masts and yards, 5347 ; oars, 31,030 ; deals, planks, &c., 2,480,626.

In 1842, 1843, and 1844, the ships which arrived at Quebec from the sea, chiefly for timber, down to the 11th of November, were as follows :

	QUEBEC.	Vessels.	Tonnage.

A circular issued by one of these houses at Quebec, on the 5th of December, 1844.

" In the early part of the season, the high price of white pine in Liverpool, was generally supposed to result from the barrenness of the market there, but every branch of trade in England being prosperous, caused a great demand for this great staple, and each succeeding steamer brought more flattering accounts; freights advancing from 30s. to 35s., and subsequently to 38s. and 39s., and vessels scarce and not to be procured. By our advices to the 4th ultimo, we are informed that the unparalleled number of 110 arrivals of timber ships in the port of Liverpool, in the month of October, had little effect on the market, which was wonderfully supported, notwithstanding the addition, in such a short period, of upwards of 61,000 tons of timber. The number of mills erecting in the manufacturing districts and the rage for railroads, which are projected in every part of the United Kingdom, with the immense improvements in Birkenhead for the increased dock accommodation in the port of Liverpool, are all sensible causes of the great consumption of our timber.

" Whether these will continue, or whether the ensuing season will be equally beneficial to our friends on the St. Lawrence and the Ottawa, it is difficult to conjecture; and acting on the rule we have laid down for ourselves in the issue of our prices current, of merely advising what has taken place in the market, and carefully abstaining from hazarding any opinion of prospective prices, we will content ourselves by simply stating the impression generally prevalent is, that a large and active demand will be experienced next year, and an unusually large stock will be got out to meet it.

" So much, however, depends on our weather in winter and spring, that much uncertainty of the quantity manufacturing getting to market must always exist.

" By the supervisor's return, the quantity of timber received during the year 1844, is as follows:—

DESCRIPTION.	Feet.	DESCRIPTION.	Feet.
	number.		number.
White pine.....	12,150,564	Balt. mat.....	3,740
Red pine.....	4,161,317	Basswood.....	7,919
Oak.....	709,510	Tamarack.....	19,725
Elm.....	660,264	Russ. maple.....	255
Ash.....	128,458	Yew.....	1,601
Birch.....	73,142	Poplar.....	45
Maple.....	831	Walnut.....	3,289

" Taking into consideration a small quantity of timber wintering over last year without being measured, and which of course is not included in the above return, our exports of square timber, and that used in our ship-yards, will not vary much from the following:—

DESCRIPTION.	Feet.	DESCRIPTION.	Feet.
	number.		number.
White pine.....	11,550,134	Elm.....	1,700,284
Red pine.....	1,659,119	Ash.....	172,316
Oak.....	1,213,110	Birch.....	61,491

It may be observed, that scarcely any timber shipped from Canada, is the produce of the United States, and that a great quantity of timber and lumber is exported from Canada to the latter.

American Wheat Shipments by the Welland canal to Canada.—The canal is thirty-eight miles long, ten feet deep, and has a large number, some forty locks, to overcome a rise of 360 feet, existing between Port Dalhousie, on Lake Ontario, and Port Colborne, on Lake Erie.

Tolls received upon the Welland canal for—

	1835	1836	1837	1838	1841
	£	£	£	£	£
Tolls.....	3407	3754	3516	6740	20,210

In 1840, of the total amount of wheat shipped from Lake Erie, *via* the Welland canal, 707,000 bushels were received at Oswego, together with 8461 barrels of flour. Among the items shipped from Oswego that year, through that canal, were 153,538 barrels of salt.

Progress of Toronto.—The population of this rapidly improving city, has doubled itself within the last ten years. The number of inhabitants in June, 1843, according to the census, was 17,805; at present the number exceeds 20,000. The revenue of the port of Toronto, for the year ending the 5th of January, 1844, is upwards of 18,000*l.*, of which fully two-thirds arise on goods imported from the United States. The total exports during the same period, amount to 105,000*l.*, of which not more than 2506*l.* were sent to the United States. The amount of specie exported to Buffalo, is about 2500*l.* per week.

NUMBER of Emigrants arrived at Toronto, from the 16th of May to the 16th of November, 1844.

Commerce of Hamilton, Lake Ontario.—In 1842, the receipt of customs at the port of Hamilton amounted to 7604*l.*, which was considered to be a large sum when compared with Toronto, which for the same period produced only 8300*l.* During the last year it will be seen that the customs amounted to 12,190*l.*, being an excess over the previous year of 4586*l.* The canal tolls have also increased to 1986*l.*, which, added to the customs, makes the very large sum of 14,176*l.* To this sum may be added duty on articles in bond, 2750*l.* so that the whole amount of customs and tolls for the year, is 16,926*l.* This great increase is owing to the very advantageous natural position of Hamilton. Placed at the head of Lake Ontario, having excellent roads diverging from it in all directions, an extensive and fertile country, hardy and industrious farmers, and skilful artisans, enlightened and enterprising merchants—the town of Hamilton must in a few years become one of the largest in Western Canada, and also one of the most prosperous. “Among not the least causes to accomplish this end, will be the enlargement of Burlington canal, which is now in progress. When this is completed, aided by the improvements in the navigation of the St. Lawrence, the appearance of sea-going vessels in our harbour will be no novelty.”—*Express.*

"PORT HOPE.—NEWCASTLE DISTRICT.—*Produce of Wheat.*—During the past winter there has been more wheat purchased in this town than in any former season. There are more than 100,000 bushels stored here now, and it is confidently believed there is a third of what was raised in the back townships to come in, which, when the roads get a little better, will be brought forward. In Windsor, we understand there are about 60,000; in Oshawa, 80,000; Bowmanville, Newcastle, and Bond Head, respectively, as much more, which will make at the least 500,000 bushels. This is independent of what has been purchased in Peterborough, in the back stores in Cavan and Monaghan, the greater part of which will pass through our harbour to market; and that purchased in Cobourg; in all we may safely say between 700,000 and 800,000 bushels, at the average price of 4s. to 4s. 3d., making the round sum paid for this article in this neighbourhood, at least 150,000l. This trade will continue to increase, and we have no doubt that in a very few years 1,000,000 of bushels will be purchased annually at these places."—*Port Hope Gazette.*

STATEMENT of the Population of Upper Canada, with the Assessed Value of Taxable Property, Number of Acres of Uncultivated Land liable to Tax, and Cultivated Land in the Years 1825, 1835, 1839, 1840, and 1841.

CHAPTER XIX.

COMMERCE OF THE MISSISSIPPI AND ITS TRIBUTARIES.

THE settlement, cultivation, trade, and navigation of the regions drained by the Mississippi, Missouri, the Ohio, and the numerous tributaries of those rivers, are subjects unparalleled in their rise, progress, and magnitude.

Within the duration of not more than the ordinary long life of a human being, the empire of the west has risen to its present magnitude. A few straggling hunters were *trapping* amidst the forests of Kentucky, when they heard the intelligence of the fight at Lexington. To the spot where they had erected their camp they gave the name of their battlefield. Such was the origin of the first settlement, and the first city in the great western valley.

Before this period there was no craft, we believe, of greater capacity than the canoe of the red men, navigating the western waters at least not farther north than Louisiana. After the beech bark canoe, and the canoe formed of a single tree, scooped out by tools or by burning, the pirogue appeared, also formed by scooping out one or more trees, and joining them together in the form of a vessel. The *barge*, the *flat boat*, and the *keel-boat*, afterwards appeared on the great rivers of America. The barge was the largest of the three.

One of the earliest attempts to navigate the Ohio, down to the Mississippi, and to New Orleans, was in 1776, when Messrs. Gibson and Linn, the grandfather of Dr. Linn, afterwards a senator in Congress from Missouri, descended by water from Pittsburg to New Orleans, to procure military stores for the troops stationed at the former place. They succeeded, and in the spring of 1777 brought back a cargo of 136 kegs of gunpowder.

Judge Hall, in his notes, observes:—

“A month was usually consumed in the passage from Pittsburg to New Orleans, while the return voyage was not effected in less than four months, nor without a degree of toil and exposure to which nothing but the hardiest frames, and the most indomitable spirits, would have been equal. The heavily laden boats were propelled against the strong current by poles, or, where the stream was too deep to admit the use of those, drawn by ropes. The former process required the exertion of great strength and activity, but the latter was even more difficult and discouraging—as the laborer, obliged by the heat of the climate to throw aside his clothing, and exposed to the burning rays of the sun, was forced to travel on the heated sand to wade through mire, to climb precipitous banks, to push his way through brush, and often to tread along the undermined shore, which giving way under his feet precipitated him into the eddying torrent of the Mississippi. After a day spent in toils which strained every muscle to its utmost power of exertion, he threw himself down to sleep, perhaps in the open air, exposed to the cold damps and noxious exhalations of the lower Mississippi, and the ferocious attacks of millions of mosquitoes, and reposed as unconscious of danger, or inconvenience, as the native alligator which bellowed in the surrounding swamps.

“The flat boat was introduced a little later than the others. It is a rough strong boat, with a perfectly flat bottom, and perpendicular sides; and covered throughout its whole length. Being constructed to float only with the current, it never returns after descending the river. These boats were formerly much used by emigrating families, to transport themselves down the Ohio, and are still built in great numbers on the various tributary streams, and floated out in high water, with produce for New Orleans.”

Such were the vessels by which the navigation and trade of the western rivers was carried on, previous to the year 1811. A few bad roads crossed the mountains, and some waggons were dragged over them with such difficulty that a large portion of the merchandise was carried on the backs of horses. A few years afterwards, a delegate from Kentucky was considered a visionary for requesting of Congress the establishment of a mail to Pittsburg, to be carried on horseback once in two weeks. “He was told,” says Judge Hall, “that such a

mail was not needed, that it probably would never be required, and that the obstacles of the road were insuperable. That venerable patriot has lived to see the establishment of *two* daily mails on the same route; while the canals, the railways, and the turnpikes that lead to the west, have rendered it accessible, with ease and safety to every species of vehicle."

"The first steamboat built on the western waters," says a writer in the *Western Monthly Magazine*, "was the *Orleans*, built at Pittsburg in 1811; there is no account of more than seven or eight built previously to 1817; from that period they have been rapidly increasing in number."

The *Orleans*, 400 tons, the first boat built at Pittsburg, was owned and constructed by Mr. Fulton, and sailed from Pittsburg in December, 1812, and arrived at New Orleans about the 24th of the same month.

Before the introduction of steam navigation, about 1817, the trade of the upper Mississippi and Missouri scarcely existed, and the whole upward commerce of New Orleans was conveyed in about twenty barges, carrying each about 100 tons, and making but one trip a year: a longer period than required to make an East India or a China voyage. On the upper Ohio, about 150 keel-boats were employed, each of the burden of about thirty tons, and making the trip to and from Pittsburg and Louisville, about three times a year. The whole tonnage of the boats navigating the Ohio and lower Mississippi was then about 6500 tons.

According to a statement in the *Merchants' Magazine*, in 1842 the navigation of the Mississippi was as follows:—

"There were 450 steamers, averaging each 200 tons, and making an aggregate tonnage of 90,000, so that it has a good deal more than doubled in eight years. Valued at eighty dollars the ton, they cost above 7,000,000 dollars, and are navigated by nearly 16,000 persons, at thirty-five to each. Besides these steamers, there are about 4000 flat-boats, which cost each 105 dollars, are managed by five hands a-piece (or 20,000 persons), and make an annual expense of 1,380,000 dollars. The estimated annual expense of the steam navigation, including fifteen per cent for insurance, and twenty per cent for wear and tear, is 13,618,000 dollars. If, in 1834, they employed an aggregate of 90,000 persons, they must now occupy at least 180,000. The boats, ever in motion when the state of the waters in which they ply permits, probably average each some twenty trips in the year. Those running from New Orleans to the more distant points of the river, make from eight to fifteen trips in the year; while those carrying the great trade from Pittsburg, Cincinnati, and Louisville, to St. Louis, perform some thirty annual trips. Others run between still nearer ports, and make more frequent voyages. But at twenty each, and carrying burdens far beyond their mere admeasurement of tonnage, their collective annual freight would be 1800 tons; to which, if that of 4000 flat-boats (each seventy-five tons) be added, we have a total freight, for the entire annual navigation of the Mississippi, of about 2,000,000 tons. The commerce which they convey (omitting the great number of passengers whom they waft in some 9000 trips) is of two sorts: that of the export trade to New Orleans, and that of supply and interchange between the different regions lying on the Mississippi and its tributaries. The latter is well ascertained to be considerably greater, as naturally happens in the internal trade of all wide and commercial countries, whose dealings with foreign lands never fail to fall far short of their exchanges with each other. The statistics collected at the two main points where the best means of information can be commanded (St. Louis and Cincinnati), estimate this internal traffic of the productions of the country itself at not less than 70,000,000 dollars annually; while those commodities shipped to New Orleans for exportation, are found to be 50,000,000 dollars more. The downward trade may thus be stated at 120,000,000 dollars; the upward, or return trade of foreign goods, or of those brought up the river from other parts of the Union, is reckoned at about 100,000,000 dollars. Thus, the entire amount of commodities conveyed upon the waters of the Mississippi does not, upon the best estimates, fall short of 220,000,000 dollars annually, which is but 30,000,000 dollars less than the entire value of the foreign trade of the United States exports and imports in 1841."

Total from Pittsburg to St. Anthony Falls, 2037 miles.
Total to St. Anthony Falls 800 miles.

The charge or fare for passage on the Mississippi and Ohio rivers is about three dollars per 100 miles for long distances, and four to five cents per mile for short distances. Deck passengers, one dollar per 100 miles. The usual speed of the boats is six miles an hour up stream, and from ten to twelve down.

An important point of internal trade on the Ohio river, is the Portland and Louisville canal, through which the navigation of that great river passes.

STATEMENT of the Number of Boats that have passed through the Portland and Louisville Canal and Amount of Tolls received, during the undermentioned Years.

The trade of New Orleans with the upper countries of the Mississippi, Ohio, and Missouri, and especially the produce and merchandise brought, during several years, downwards to that city, will be found detailed in our account of New Orleans.

The principal places situated on the banks of the Mississippi and its tribu-

ties. between New Orleans and the mouths of the Ohio and Missouri, we have described in the account we have given of the respective states.

The great entrepôts of the internal trade of the upper counties are St. Louis and Cincinnati.

St. Louis, as late as the year 1836, was little more than a trading village; now (1845) contains a population of probably 40,000. (*See description of the state of Missouri and its towns.*) A great portion of the trade of the states of Illinois and Missouri, and the territories of Iowa and Wisconsin, centre at this town. Bricks in great quantity; and deals, boards, &c., produced by numerous steam saw-mills, and by several mills for planing; the produce of white-lead factories, grist-mills, oil-mills, and other fabrics also create an active trade. The amount of marine insurances effected at St. Louis, including boat-hulls and cargoes, and comprising only property floating on the rivers, is stated, in 1842, to have been 58,021,986 dollars.

The leading articles of export from St. Louis and of the adjacent country, of which it is the emporium, are lead, tobacco, furs, and peltries, hemp, flour, wheat, and other agricultural products; also horses, mules, hogs, and live cattle of various sorts, which are shipped to the south in flat or keel-boats.

The lead-mines of Washington, and other southern counties, are below St. Louis; although the lead is chiefly shipped from that port, by boats, to New Orleans. The quantities of this article received at St. Louis, from the Galena mines, for three years, ending in 1841, were as follow:—

1839.	pigs 375,000
1840	390,000
1841.	425,000

The quantity of lead received at New Orleans, for the same period, was as follows:—

1839.	pigs 300,000
1840	352,000
1841.	423,000

STATEMENT of the Shipments of Lead from Galena and Dubuqué, and all other Points on the Upper Mississippi, for 1841, 1842, and 1843.

Pigs Wisconsin copper, 1100 equal to 98,900 lbs.

"The above statement of the shipments of lead made from this section of the country this season, compared with that of 1841 and 1842, together with the number of steamboat departures, and number of keels and barges towed: shows 561,321 pigs against 447,859

pigs in 1842, and in small bar lead, 2410 pigs against 840 pigs; showing an actual increase in the shipments of lead . . . 115,032 pigs

To which should be added that stopped by ice in 1842,
none of which reached St. Louis prior to the 10th of
April, 1843 . . . 25,142 „

Making an actual increase in the supply of . . . 140,174 „

“That made into shot, say 5000 pigs, has gone to supply the lake borders, as well as the lead shipped that way. The steamboat arrivals show an increase of 49 over 1842, being 244 against 195.

“The article of Wisconsin copper is attracting notice, and will become a valuable article in the trade of this country. Our shipments this year amount in value to, say 11,000 dollars, and will, I think, in 1844, double that amount. In the Boston market it commands the same price as Peruvian copper, and with one house has the preference over it.

	dls.	cts.
“The value of the lead exported from here this year may be set down at 563,731 pigs of 70 lbs.=39,461,171 lbs.; at two dollars twenty-seven cents and one-third . . .	937,202	00
And copper . . .	11,000	00

Total . . . 948,202 00

Galena, Dec. 15, 1843.”

Of the tobacco crop of Missouri, it is stated, by a house engaged in the trade, that the shipments, during the year 1841, were about 9000 hogshheads, of which 8500 passed through St. Louis, and of the subjoined quality and value:—

The crop for 1843, was estimated at above 12,000 hogshheads. The trade of the American Fur Company, and that of independent fur traders, including the fur trade of nearly all the northern and north-western Indians within the jurisdiction of the United States, concentrates at St. Louis. The value, to that city, of the trade in cloths, blankets, and other fabrics used in the fur trade traffic, exclusive of annuities, the pay of hands, and the outfits for expeditions, boats, &c., has been estimated, by individuals familiar with the trade, as exceeding 225,000 dollars. It has been computed that the exportation of furs, buffalo-robcs, and peltries, the proceeds of that trade, which go to the Atlantic cities, independently of the home consumption, and the quantity sent to the Ohio and other parts of the west, during the year 1841, was between 350,000 dollars and 400,000 dollars; and that the entire fur trade for that year could not fall short of 500,000 dollars. This trade includes the furs and skins that were collected by the various Indian tribes from the Mississippi to the Pacific, and from the Columbia to the California.

Hemp is becoming one of the most valuable products of the Missouri section of the country. There are, at St. Louis, two large manufactories of bagging and

bale rope, and several rope-walks. One thousand four hundred and sixty tons of hemp were exported in 1840, of which 1600 tons, grown in the state, were shipped to Kentucky, 380 tons to New Orleans. It is estimated that the crop of 1841 was double that of the preceding year; and, that, including the state of Illinois, the farmers of which are beginning to direct their attention to the manufacture of hemp, the total crop during the year 1842, was about 10,000 tons, valued at about 200,000 dollars.

St. Louis, Alton, Peoria, and most of the villages upon the upper part of the Mississippi and the Illinois river, export many thousand tons of pork in various states of preparation, as bulk and barrelled pork, bacon and lard. The value of the trade of Illinois, in that article, was estimated, in 1841, at 1,500,000 dollars.

The larger portion of the pork produced on the upper Mississippi has been consumed at the lead mines, by the Indians, and at the various military posts. A part of that which is produced on the Missouri is consumed by the Indians, the fur companies, and by the troops of the United States, stationed upon the frontier. In 1841, 174,000 barrels of flour, and 237,000 bushels of wheat were shipped from St. Louis, besides a great number of horses, mules, horned cattle, and hogs, which are sent southward by the flat or keel-boats.

Merchandise, of various sorts, required by the inland population is imported into St. Louis, as a depôt; from the east, the south, and the Ohio, and estimated at the value of 25,000,000 dollars. Some of those articles imported into St. Louis, such as hardware, queen's, and China ware, German and French goods, linens, wines, and liquors, to the amount of several thousands of dollars, were imported in transit directly from Europe. An extensive trade is carried on between St. Louis and Santa Fé, and the States of New Mexico.—(*See Trade of the Prairies and Santa Fé hereafter.*)

On the Mississippi and its tributaries, 437 boats regularly plied during the year 1841, of which 150 were employed in the St. Louis trade, and eighty-three steamboats were, in part, owned by citizens of that place; some of which plied from the Ohio to Peoria, upon the Illinois, and to Galena, upon the Mississippi; others were employed in the direct trade from New Orleans to various points upon the Missouri, making St. Louis the rallying point. The steamboats, keel-boats, and flatboats, either carried direct from St. Louis to New Orleans, or sold along the river coast, flax-seed, tobacco, wheat, whiskey, shot, hides, hemp, castor oil, corn, meal, buffalo robes, bees'-wax, rope, butter, bagging, beans, furs and peltries, green fruit, dried tallow, bacon, beef, dried corn, flour, lard, lead, oats, potatoes, pork, onions, and live cattle.

Vicksburg, Natchez, and other minor places, are important points of shipment for the produce of the interior to New Orleans, the grand entrepôt of the Mississippian regions for foreign commerce, and the natural point of export to foreign countries.

CHAPTER XX.

THE AMERICAN FUR TRADE.

THE trade for the purchase of the skins of wild animals commenced nearly with the first voyages to the coasts of America. We find that the early voyagers traded for furs within the Gulf of St. Lawrence, and along the shores and rivers of Acadia (now Nova Scotia and New Brunswick), and various parts of the country now forming the state of Maine, and the New England states, and of Cape Breton, St. John's Island, and Newfoundland. The skins of bears, foxes, martens, and some other wild animals, have continued from that period down to the present day, to form articles of commerce, to a moderate extent, in all those countries.

The great fur trade of North America commenced first at, and was carried on from, Canada, and it was, afterwards shared by adventurers who resorted to Hudson Bay.

The French colonists, who established themselves upon the St. Lawrence and the bordering lakes and streams, not discovering gems nor gold, directed their views to the mighty wilderness, and to the vast lakes and magnificent streams west of Quebec; and to the hunting of wild animals, whose furs were of great value in the foreign markets. Cardinal Richelieu organised, in 1627, the Company of New France, a chartered body comprised of 100 members, and granted to this company two ships of war. From that time the French colonists extended their posts along the great lakes and rivers of the west. These posts were the points of rendezvous of the fur traders—where European wares were exchanged for the skins of wild beasts.

The French fur trade was created as much by the character of the people as the spirit and policy of the government. The French colonists were scattered at different commanding points from the St. Lawrence to the banks of the Missouri. They consisted of three classes: the *seigneurs*, who were deemed the patricians of the country, and who held its advantages by royal charters; the ecclesiastics, who erected their crosses amid the near and distant Indian nations, and who were important agents of the French government in gaining the friendship of the aborigines; and the vagrant adventurers who were subjects of the feudal system under the *Coutume de Paris*, or the French colonial law.

The French American colonies were military and mercantile, far more than agricultural colonies. The feudal possessors of the country strove, by the course they pursued, rather to secure the greatest amount of temporary advantage than to perpetuate either their own hold on the soil, or the dominion of France over

the Canadas. Under noble leaders, and the Jesuits and priests, feudal, semi-military, and trading, as well as converting, or religious, expeditions, were despatched, from time to time, from the head-quarters of the government at Quebec and Montreal, with implements to erect posts, or factories upon the borders of the lakes, as places of deposit for European merchandise, and for the peltries collected, and as outposts for the protection of French power. Within the first fifty years after the foundation of Quebec, by Samuel de Champlain, we find factories extending to the shores of Lake Superior, at Detroit, Mackinaw, Duquesne, Chicago, Green Bay, St. Joseph, St. Marie, and St. Vincent. They consisted of rude houses, erected in the woods, thatched with bark, and in the midst of those buildings the Jesuit missionary erected a chapel, surmounted by a cross. A rude fort constructed with palisades contained a small garrison of soldiers.

The seigneurs, who, with the governor-general of Canada, were invested with the sovereign power, under the King of France, were generally partners in the fur trading company.

The active agents of the French fur trade were the *Coueurs des Bois*, or rangers of the woods. As a class, they were reckless and improvident. Inured to the hardships of the forest and the wilderness, they soon became attached to a wandering life amidst the woods. The dress of the *Coueurs des Bois* consisted of leggings, mocassins, a capote, or blanket coat, and a red sash twined around them as a girdle, in which was stuck a steel scalping-knife. In this respect they differed little from the native Indians. They departed for the west periodically, by the north-western lakes; and thence, by the forest and streams, to those posts where the Indians were in the habit of resorting, and where were collected the cargoes of furs and peltry, with which they returned to Quebec and Montreal, from which the furs were shipped for France. The goods sent upwards, and the furs brought down made up in packs, were transported in canoes made of birch bark, sufficiently large to convey six men and the goods transported into the interior for barter, and the furs received in exchange. The articles of trade were imported from France, in packages of convenient size. They consisted of cotton cloths, blankets, calicoes, guns, hatchets, and other kinds of hardware, cheap ornaments, and other articles suited to the taste or wants of the Indians. Thus the fur traders, when they reached the Indian territory, either hunted or trapped themselves, or exchanged their goods with the Indians for the furs, which were deposited with the "Farmers of the Beaver Skins," for the purpose of being sent to the markets.

In order to prevent the desertion of the traders from the posts, it was ordained that no person should be permitted to trade with the Indians without passports from the French king, and all persons who had not those licences, were prohibited going from Quebec, or Montreal, to the Indian country under

the penalty of death. The ordinary price of these licences, according to La Hontan, was 600 crowns, and they were purchased from the governor-general of Canada by the merchants, and by them sold to the *Coueurs des Bois*, at an advance of about fifteen per cent more than they could command in ready money at Quebec and Montreal. The privileges granted in those licences allowed each possessor to proceed to the ports with two large canoes laden with cargoes of manufactured goods, valued at about 1000 crowns. Each canoe had a crew of six men. On their voyages made through the lakes annually, the ordinary profit was 100 per cent, from which the merchant took 1000 crowns for the prime cost of his exported goods, 600 crowns for his licence, and forty per cent for *bottomry*, so that there remained, from the two cargoes, only 680 crowns, which were divided among the twelve *Coueurs des Bois*. During each year the traders came down the lakes and streams, from the remotest banks of Lake Superior, and then to the Ottawas river, or across the portage of Niagara, with full freights, which were disposed of at Quebec and Montreal.

The evil effects of this exclusive policy soon became manifest, and nearly every person was permitted to embark in the fur trade, and the system of granting licences was abolished. Great improvidence soon pervaded the management of the Canadian fur trade. French manufactures, used in the trade, were of much higher cost than those of the English, and in consequence the profits became so small that many of the French traders absconded to the English posts, which were first established in the country now forming the state of New York.

The Baron La Hontan, who was a resident at Montreal about the year 1685, and who was for some time the French commandant of a fur trading post on the River St. Clair, between Lakes Huron and Erie. in his account of the fur trade, says,—

“Much about the same day, there arrived at Montreal, twenty-five or thirty canoes belonging to the *Coueurs des Bois*, laden with beaver skins. The cargo of each canoe amounted to forty packs, and will fetch fifty crowns at the farmers' office. These canoes were followed by fifty more, of the Ottawas and Hurons, who came down every year to the colony, in order to make a better market than they can do in their own country of Michilimackinac, which lies on the banks of the Lake of Hurons (Lake Huron); at the mouth of the Lake of the Illinese (Lake Michigan). Their way of trading is as follows:—Upon their arrival, they encamp at the distance of 500 or 600 paces from the town. The next day is spent in ranging their canoes, unloading their goods, and pitching their tents, which are made of birch bark. The next day they demand an audience of the governor-general, which is granted them that same day in a public place. Upon this occasion each nation makes a ring for itself. The savages sit upon the ground, with their pipes in their mouths, and the governor is seated in an arm-chair; after which, there starts up an orator, or speaker, from one of these nations, who makes an harangue, purporting that his brethren are come to visit the governor-general, and to renew with him their wonted friendship; that their chief view is to promote the interest of the French, some of whom being unacquainted with the way of traffic, and being too weak for the transporting of goods from the lakes, would be unable to deal in beaver skins, if his brethren did not come in person to deal with them in their own colonies; that they know very well how acceptable their arrival is to

the inhabitants of Montreal, from the advantage they reap by it; that, inasmuch as beaver skins are much valued in France, and the French goods given in exchange are of an inconsiderable value, they mean to give the French sufficient proof of their readiness to furnish them with what they desire so earnestly. That by way of preparation for another year's cargo, they are come to take in exchange fusils, powder, and ball, in order to hunt great numbers of beavers, or to gall the Iroquois, in case they offer to disturb the French settlements. And in fine, that in confirmation of their words, they throw a porcelain collar with some beaver skins to the governor-general, whose protection they lay claim to, in case of any robbery or abuse committed upon them in the town. The spokesman, having made an end of his speech, returns to his place, and takes up his pipe, and the interpreter explains the substance of the harangue to the governor, who commonly gives a very civil answer, especially if the presents be valuable: in consideration of which he likewise makes them a present of some trifling things. This done, the savages rise up and return to their huts, to make suitable preparations for the ensuing trucking.

"The next day the savages make their slaves carry the skins to the houses of the merchants, who bargain with them for such clothes as they want. All the inhabitants of Montreal are allowed to traffic with them, in any commodity but rum and brandy; these two being excepted, upon the account that when the savages have got what they wanted, and have any skins left, they drink to excess, and then kill their slaves, for when they are in drink, they quarrel and fight, and if they were not held by those who are sober, would certainly make havoc one of another. However, you must observe that none of them will touch either gold or silver.

"As soon as the savages have made an end of their trucking, they take leave of the governor, and so return home by the river Ottawas. To conclude, they did a great deal of good both to the poor and rich, for you will readily apprehend that every body turns merchant upon such occasions."

At this early period, a jealousy arose on the part of the French towards the advances of the English fur traders: who, as early as 1686, had penetrated the wildernesses as far as Michilimackinac. In 1720, Charlevoix says, "As for what has been said, that by making a settlement at the Detroit, we should bring the fur trade too much within reach (of the English), there is not a man in Canada who does not agree that we can never succeed in preventing the Indians from carrying them their commodities, let them be settled where they will, and with all the precautions we can possibly take, except by causing them to find the same advantage in trading with us as in the province of New York."

While the French traders were trading among the forests bordering on the great lakes and the Mississippi, and supplying furs to the markets of France, a rival power appeared in Hudson's Bay; which great inlet was first entered by the expedition sent from England, to discover a northern passage between the Atlantic and Pacific. Charles II. granted to a society of London merchants, denominated *The Hudson's Bay Company*, a charter in 1669, upon the implied condition that they would strive to discover a north-west passage. This association confined its trade within the regions of the north, until as a competitor with the French, for nearly a century, the Hudson's Bay Company afterwards extended its trade throughout the greater portion of the north-western territory.

The English fur trade continued to advance through the great chain of the lakes and the region of Hudson's Bay, mingling barbarism and civilisation, until

the power of France was driven from Canada. From the time of the surrender of the French posts in 1760, down to the year 1766, the fur trade from Montreal was in a great measure suspended. The furs which were collected by the Indians from the borders of the lakes, were sold to the traders of Hudson's Bay, who now extended their posts towards the territory which had formerly been occupied by France. In 1766, a few Scotch merchants from Upper Canada, finding the field unoccupied, established a post and factory at Michilimackinac, the central post of the former French fur trade. From this point, their operations soon extended far beyond Lake Superior and the upper waters of the Mississippi, north to Lake Winnipeg, and the Saskatchewan and Lake Athabasca. These traders, on coming in collision with the traders of Hudson's Bay, were for some time harassed, but not expelled by the latter.

Jonathan Carver, an adventurous native of Connecticut, left Boston in 1766, and passing through the Straits of Mackinaw and the upper lakes, passed the two succeeding years in exploring the country west of the Mississippi. His intention was to ascertain the character and acquire the languages of the various Indian tribes which were scattered over those regions, as well as to gain a knowledge of the quality and productions of the soil beyond the Mississippi, and also to discover the breadth of the continent of those regions in its broadest part, from the Atlantic to the Pacific Ocean, between the forty-third and the forty-sixth degree of northern latitude. His ultimate object was to propose to the government the establishment of a post in that region, near the "Strait of Anian," which he considered would facilitate the discovery of a passage between Hudson's Bay and the Pacific. These objects, however, he was not destined to complete; as he was obliged to give up the project just as he had advanced to the river St. Peter's. The journal of his travels was published in London, and widely circulated. It contained interesting information relating to the topography of a country which had then been but partially explored, as well as facts relating to the Indian tribes. It soon led to further adventures.

In 1784, preparations were made by several European nations for the prosecution of the fur trade; especially between the north-western coast of America and China. At this period, the Russians procured the greater part of their furs from the northern parts of their empire, and transported them to China by land; while the markets of Great Britain were supplied by the factories of Canada and Hudson's Bay. China had been long a valuable mart for furs, which were highly prized in the northern parts of the *Celestial Empire*, as a defence against the cold, and throughout its whole extent, as a badge of rank and wealth.

In 1785, James Hanna, an Englishman, sailed from Canton in April, for the prosecution of the fur trade, and, in August, he arrived in Nootka Sound in the first ship that had ever explored the north-west coast of America. Here he exchanged coarse manufactures, and old iron, for a valuable cargo of furs, with

which he returned to the port of Canton. About the same period, an association of merchants termed the "King George's Sound Company," was formed in London for the prosecution of the fur trade on the western coast of America. The scheme of this company was to collect furs on that part of the continent, and to transport them direct to Canton, receiving their return cargo in tea: a special permission having been granted by the East India Company, to carry those teas to London. For this purpose two ships were despatched to the Northern Pacific. In the course of the two following years, two vessels were sent out from Calcutta and Bombay, by the East India Company; from Macao and Canton by the English and Portuguese; and from Ostend under the flag of the Austrian East India Company. The French also, in 1790, despatched expeditions to the north-west coast for the purpose of obtaining information respecting the fur trade. An agent was sent out by Spain to California for the purpose of collecting furs for the market of Canton, in which adventure he appears to have partially succeeded. But the few furs which he had collected were of inferior quality. Meantime the Russians gradually extended their trade on the north-western coast. The American ships *Columbia*, of 220 tons, and the *Lady Washington*, of 90 tons, under the command of Kendrick and Gray, were fitted out by an association of merchants in Boston, and furnished with sea letters from the general government. They sailed together on the 30th of September, 1787, for the prosecution of the fur trade on the same coast.

During the year 1787, the North-west Company of Montreal was established. This association was formed, for the purpose of preventing the fatal collisions which had occurred between individual Canadian traders and those of the Hudson's Bay Company, as well as to re-organise the fur trade on a larger and more secure system. Its members were comprised of the principal merchants of Montreal, who had before been engaged in the fur trade around the lakes. This company did not obtain a charter, but constituted themselves a commercial partnership. It consisted of shares unequally divided among individual stockholders, some of whom were engaged in the importation of goods necessary to carry on the trade, in the supply of capital, and in the exportation of the proceeds; and others who were employed in actual trade at the interior posts and among the Indians. The shares of this company were gradually increased. The agents of the company went annually to Detroit, Mackinaw, St. Mary, and the grand portage, where they received the furs, and forwarded them to Montreal. The articles for the trade consisted of woollen and cotton goods, hardware, cutlery, fire-arms, ammunition, some spirits, and those ornaments and tinsels which were prized by the Indians, as well as in the market of Montreal. These goods were annually shipped from London about the first of May, and in the winter they were bartered for furs and peltry, which during the next autumn were shipped from Canada to London. The food which they used was of a

coarse kind. The partners of the company, the interpreters, clerks, guides, and all in office, were allowed better provisions; but the canoe-men, or *voyageurs*, had generally nothing better than fat melted, or boiled, with Indian corn meal.

The Hudson's Bay Company, which had exercised supreme dominion over the cold regions of the north, soon found a new company advancing over their territory, and the rivalry of the two companies soon gave rise to violent outbreaks, though they confined themselves within different chartered limits. The North-west Company extended its operations over the north-western lakes: their *employés* aided by French Canadians, half-breeds, and Indians, with their commanders or agents, occupied the posts which had formerly belonged to the French along the great lakes and the Mississippi; and in two years after the first establishment of the North-west Company, its advanced posts extended as far as Athabasca lake, 800 miles beyond Lake Superior.

The following table, exhibiting the number of skins, which were collected by this company during one year, is given in the introduction to the *Voyages* of Sir Alexander Mackenzie, a partner in that association:—

Product of the North-west Company, for one Year previous to 1794.

106,000 beaver skins.	600 wolverine skins.
2,100 bear skins.	1,650 fisher skins.
1,500 fox skins.	100 racoon skins.
4,000 kit fox skins.	3,800 wolf skins.
4,600 otter skins.	700 elk skins.
16,000 musksquash skins.	750 deer skins.
32,000 marten skins.	1,200 dressed deer skins.
1,800 mink skins.	500 buffalo robes.
6,000 lynx skins.	

Fort William, near the grand portage on the north-western shore of Lake Superior, was the port of annual rendezvous, where the partners from the interior met the leading directors from Montreal, to discuss the interests of the trade. The latter ascended the rivers and lakes of the west in large canoes, manned by Canadian voyagers, and provided with articles of traffic as well as of luxury, not excepting the choicest wines. The place of assemblage was the grand council-house, a large wooden building. The antlers of the elk, the bow, and the war club; Indian ornaments of various kinds; richly sculptured pipes wrought from the red stone of that region, or cut from the horns of the deer, and ornamented with the plumes of birds; buffalo robes, and various trophies of Indian hunting and warfare, adorned the walls of the hall. Bear and buffalo skins formed the carpets. At this season a grand dinner was usually provided: consisting of the flesh of deer, buffalo, hares; of various wild fowl; of fish caught in the lakes or streams; and of the luxuries carried from Montreal. The partner of the company; the French *voyageur*, decorated with tinsel, and with a red feather waving in his hat; the half-breed, the highlander, and the

Indian, were all mingled together. On these occasions the forests and rocks echoed the song and the wild music of revelry; and the Indians and traders shared equally in the pleasures, or intemperance, of this annual orgy.

The Russian government was, at the same period, extending its establishments along the western coasts of America. An association was formed by the merchants of Eastern Siberia as early as 1785, for the purpose of carrying on the fur trade upon the northern coasts of the Pacific, under the protection of the Empress Catherine. The government seemed disposed to suppress that company, on account of the cruelty of its agents towards the natives. But the Czar, on the 8th of July, 1799, granted to the association a charter, under the name of the "Russian American Fur Company," giving its shareholders an exclusive right to trade, for twenty years, along a large portion of the coast. This privilege was confirmed by the Emperor Alexander. The directors of this company had their residence in Siberia, at their grand depository for the China trade. This chief office was afterwards changed to St. Petersburg, and was placed under the general control of the imperial department of commerce. The Russian fur trade, although more absolute and military than was that of the French, or than that of the English, was governed by nearly the same general system. At this early period, numerous collisions occurred between the Russian and the United States' fur traders, arising from mercantile rivalry; and, among other charges made, it was complained that fire-arms were furnished to the natives by the Americans. During the year 1791, seven vessels from the United States arrived in the North Pacific, in search of furs; and Captain Ingraham, who sailed from Boston, in 1790, discovered the group which he called the Washington islands.

That celebrated intrepid traveller, Sir Alexander Mackenzie, traversed the continent of America, to the Pacific, in 1793, but England did not then seize upon the advantages which his experience enabled him to describe. The American vessels which traded to the north-west coast for furs, sailed from the United States or from Europe, to the North Pacific, with cargoes of spirits, wine, sugar, tobacco, fire-arms, gunpowder, iron, and coarse manufactures of various kinds, which were exchanged along the sea-coasts with the natives, or Russians, for furs; or return cargoes were obtained by hiring from the Russian agent, hunters and fishermen to procure furs and fish. These cargoes were then shipped to Canton, and bartered for teas, porcelain, nankeen, and silks, which were shipped to the markets of Europe or the United States; or if the American ships were not able to collect a full cargo of furs, they, in its broadest extent, were laden with sandal-wood, pearl-shells, and tortoise-shells, at the Sandwich Islands, for which articles a market and fair prices were found at Canton.

In consequence of the success of the North-west Company of Canada, an

American fur trading company was afterwards formed, called, from its principal depôt on the island of Mackinaw, the Mackinaw Company. The North-west and Hudson's Bay Companies traded amidst the regions of the north, and at the head waters of the Missouri; and the Mackinaw Company traded chiefly in canoes to the regions of Iowa and Wisconsin.

By a clause in Mr. Jay's treaty, concluded in 1794, British traders were permitted to enter the American territory, to carry on the fur trade. By the purchase of Louisiana, in 1803, the Americans acquired the splendid advantages of navigating the Mississippi, and all its tributaries, from their sources to the sea. Mr. Jefferson, then president, projected an expedition, to be undertaken by the federal government, for the exploration of the country watered by the Missouri, and westward to the Pacific, which led to the expedition of Lewis and Clarke. Those adventurous travellers proceeded up the Missouri towards the Rocky mountains, partly by land and partly by water, exploring the main stream to its source. Here they prepared to cross the Rocky mountains, in August, 1805, and having accomplished their object, they reached the mouth of the Columbia on the 7th of November, of the same year.

Soon after the return of Lewis and Clarke, the North-west Company of Montreal resolved to extend their fur trade west of the Rocky mountains; and during the spring of 1806, Mr. Silas Frazer, a partner, established a British trading post on Frazer's lake, near the fifty-fourth parallel, at a place since called New Caledonia.

At St. Louis, on the Mississippi, an association was formed, in 1808, called the Missouri Company, which was projected by Manuel Lisa, an enterprising Spaniard. Two years afterwards, a number of trading posts were established upon the Upper Missouri, and one beyond the Rocky mountains, on the Lewis river, by Mr. Henry, and one also on the southern branch of the Columbia. But the enmity of the natives, and the difficulty of obtaining regular supplies of food, obliged Mr. Henry to abandon it in 1810.

The operations of the North-west Company, in confederating the numerous tribes at the west, especially those in the forests around the heads of the Mississippi and the great lakes, induced the American government to send out individual traders, to supply the wants of the Indians, and, if possible, to attract their trade towards the United States. These efforts produced, at the time, but little effect.

Meanwhile, the Russians were extending their establishments upon the North Pacific coasts, as far as Norfolk Sound, and, as early as 1806, they had made preparations to occupy the mouth of the Columbia river. The territory occupied by the Russian Fur Company was divided into districts, and each district was placed under a commandant, aided by a number of Russians, who kept the

natives under entire subjection, and compelled them to labour for them. These petty commandants were under the general direction of superior commanders: one of whom resided in each group of settlements; and all were subject to the will of a chief director, or governor-general, who exercised absolute power over them, subject to certain written regulations which were drawn up at St. Petersburg. The labourers in the Russian fur trade were employed principally as mechanics, hunters, fishermen, or soldiers, and consisted chiefly of vagabond Russians. The furs collected by them were shipped to Petro-Pawłowsk and Ochotsk, to which places the goods also required for the trade were brought partly from Russia, and partly by American vessels. The Russian government afterwards nearly excluded the American vessels from the coast, in order that the Russian company might monopolise not only the fur trade, but prevent the Americans from furnishing the Indians with arms and ammunition.

In 1800, the stock of the Russian Fur Company rose to an enormous price, or value, under Alexander Baranoff, whom the Americans describe as a bold, shrewd, energetic, and heartless man: who, in weighing the interests of the fur and fishing trade, considered the profits as of far greater consequence than right and humanity.

Mr. John Jacob Astor, a German, who had emigrated from his native country in 1783, engaged individually in the American fur trade, and realised a splendid fortune. He obtained, in 1809, a charter from the legislature of New York, for organising a Pacific Fur Company: *all the capital of which belonged to himself*. His plan was to establish posts on the coast of the Pacific, on the Columbia, and on its branches, as well as on the head waters of the Missouri. These posts were to be supplied with all necessary articles for trade, either by way of the Missouri, or from the principal factory at the mouth of the Columbia: which post was to be supplied by ships, that were to sail annually from the port of New York. This principal depôt was to be the magazine for all the furs and peltries collected at the other posts, and the ships, after discharging their outward cargoes, were to be laden with furs, to be exported to Canton, and to receive there in return, teas, silks, and other Chinese productions, which were to be carried to New York. It was also proposed to supply by the American ships, the Russians on the north-west coast, with any goods they might require, for which furs were to be received in exchange; and for that object a special agent was sent to St. Petersburg, who succeeded in effecting a negotiation for carrying the project into effect. Mr. Astor received strong assurances, from the cabinet of Mr. Jefferson, of support to the enterprise.

For the prosecution of this grand project two expeditions were fitted out: one by sea and one by land. The former was directed to proceed by sea from New York to the mouth of the Columbia, with the proper stores, arms, and

ammunition, for the establishment of a fortified post at the mouth of the Columbia; and the other to advance by land, up the Missouri, and across the Rocky mountains to the same point, marking on their way the most suitable places for the establishment of the interior posts.

For the execution of his plan Mr. Astor engaged, as partners, a number of Scotchmen who had been employed in the North-west Company, together with Americans and Canadians, acquainted with the fur trade. Those partners were empowered to conduct the trade in the north-west: receiving for their services one-half of the profits, while Mr. Astor, who was to remain in New York and superintend its general operations, and furnish the capital, was to retain the other half. In 1809, the ship *Enterprise* was despatched to the North Pacific, to obtain information at the Russian settlements, and to prepare the way for future operations.

In September, 1810, the ship *Tonquin* left New York, laden with the supplies for the establishment of the post at the mouth of the Columbia, and arrived there in the March of 1811. A site was selected on that river about eight miles from the ocean, and named *Astoria*. The goods of the *Tonquin* were landed, and she sailed to the North Pacific in search of furs. During the following summer, the necessary buildings were erected; a garden was commenced; a small vessel was built; and trade was begun with the natives.

In July following, a detachment from the North-west Company arrived at Astoria, under the direction of Mr. Thompson, who left Montreal during the preceding year for the purpose of taking possession of the mouth of the Columbia. On their way to that point they erected huts and raised flags, under the conviction that it was the territory of their sovereign; but found the most important point occupied by the settlement of Astoria. The expedition was, however, treated with hospitality by McDougall, Mackay, and Stuart, the agents of the Pacific Fur Company.

The American land party under Mr. Hunt ascended the Missouri, crossed the Rocky mountains and arrived at Astoria in the spring of 1812. They suffered extraordinary hardships on their route; and had scarcely reached Astoria when news arrived of the destruction of the *Tonquin* and her whole crew, with the exception of the Indian interpreter. It appears that near Nootka Sound the crew was overpowered by the natives, with the exception of the clerk, and a few others, who took refuge in the hold, and by whom the ship was blown up. This catastrophe arrested the trade of the settlement, which was temporally revived in May, 1812, by the arrival of the *Beaver*, with supplies from New York.

In January, 1813, information of the war between the United States and Great Britain reached Astoria, and in the June following, Mr. McTavish, a

partner in the North-west Company, arrived, and communicated to McDougall and Ross Cox, the managers, that a British naval force was approaching to take possession of the mouth of the Columbia. McDougall, and Ross Cox, immediately quitted the service of the American company; entered into that of the rival association; and the traders unanimously agreed, that if succour did not soon arrive, they would relinquish the post. About the same time, a body of men in the service of the North-west Company, brought information that a large armed ship, called the *Isaac Todd*, had been fitted out at London by the North-west Company, and was approaching the Columbia under the convoy of a frigate, with directions to destroy every thing that was American. McTavish and Stewart, who led the North-west detachment, purchased the whole of the stock of the Pacific company within the territory of Columbia, and engaged in their service all the traders employed by the Americans. A transfer of all the property was accordingly made to the North-west Company for 40,000 dollars, paid in bills on Montreal. While the transfer was in progress, a British ship of war hove in sight, anticipating a valuable booty from the capture of Astoria, which was still surmounted by the American flag. The place was surrendered by McDougall, the chief agent; but the property was then safely on its way up the Columbia, in the barges of the North-west Company. The American flag was replaced by that of England, and the name of the post changed to Fort George. On the 28th of February, 1814, Mr. Hunt arrived at the Columbia in the brig *Pedlar*, which had been chartered for the purpose of transporting the property of the American company to Canton; but he found the post in possession of McDougall, acting as a partner of the North-west Company, and having the chief direction of Fort George, as a British post. Mr. Hunt received the bills which were given for the company's effects at Astoria, and its establishments, and sailed to the United States by way of Canton.

By the treaty of Ghent between Great Britain and the United States, it was provided that all posts taken during the war should be restored, and in accordance with this clause, the Americans, in 1814, demanded the restitution of Astoria, as one of those posts. On the 4th of October, 1817, the sloop of war, *Ontario*, under the command of Captain Biddle, sailed from New York for the Pacific, in order to take possession of the post, which was given up to the commissioner, Mr. Prevost, in October, 1818. During the following year, the charter of the Russian Fur Company, which had been granted by the Emperor Paul, was renewed for twenty years by the Emperor Alexander; and on the 4th of September, 1821, an imperial *ukase* or edict was issued, in which pretensions were advanced claiming a great extent of the north-western coast of America, by right of Discovery and possession: which claim, however, was not admitted by either England or America.

The rivalry of the North-west and Hudson's Bay companies, which had long involved their factors and traders in skirmishing hostility, assumed, in 1814, the character of actual war. A colony of Scotch Highlanders, established on the banks of the Red river, by Lord Selkirk, in virtue of a grant by the Hudson's Bay Company, was surprised by the North-west Company, who denied the validity of that grant; and whose posts had been supplied from the Red river lands. Numerous acts of violence ensued, and in 1814, the Scotchmen were driven away, their houses demolished, and the colony destroyed. The settlement was re-established during the following year, when hostilities were renewed, and the posts retaken and burned. On the 19th of June, 1816, a battle was fought between the rival traders, Lord Selkirk's Highland settlers were routed, and their governor, Mr. Temple, and several others, were killed. In consequence of these fatalities, and of arrangements made in 1819 and 1820, the two companies were united by the name of "*The Hudson's Bay Company*," under a charter granting to them the privilege of trading in the Indian territory claimed or belonging to Great Britain, for the period of twenty-one years. The duration of this charter was, in 1838, renewed to 1859.

Expeditions to the country west of the Rocky mountains were afterwards made, from the United States by Ashley, Bonneville, Wyeth, Parker, and others. In 1826, Messrs. Smith, Jackson, and Sublette, of St. Louis, formed a company, called the Rocky Mountain Fur Company, and purchased the establishment and interests belonging to General Ashley, of Missouri, who had previously made an expedition beyond the mountains, aided by sixty men, with a cannon drawn by mules. In 1832, Captain Bonneville, of the American army, led a band of more than a hundred men, with mules and pack-horses, transporting goods from Missouri, and collecting furs, chiefly in the country drained by the Lewis river and its branches. About the same time, Mr. Nathaniel Wyeth projected an enterprise for the prosecution of the fur trade between the ports of the United States and the Columbia; and, although he was obliged to relinquish his expedition on account of the indirect opposition of the Hudson's Bay Company, his explorations were of great service, by furnishing information respecting the country. The recent journal of Parker, contains much information respecting the Oregon region.

HUDSON'S BAY COMPANY.—The affairs of this company are managed by a governor, a deputy-governor, and a committee of directors, established in London, and by whom its operations are planned, and to whom the reports of its affairs are transmitted. The trade of the company in America, is directed by a resident governor, agents, factors, and clerks, some of whom have a share of the profits of the trade; and also by a more active class of agents, the hunters, voyagers, and trappers, consisting of Scotch Highlanders, French Canadians, half-breeds,

and Indians, who are paid a small salary, with promises of future advancement according as they shall render themselves of value to the trade. The furs which are collected are procured mainly from the Indians, in exchange for manufactured goods, which are imported into the country; the servants of the company are also engaged, at particular seasons, in hunting and trapping. The territory ranged by this company is divided into districts, each of which is under the charge of an agent, who receives the goods imported from England, and distributes them to the traders, receiving in return the furs which are collected by them. These furs are sent to three chief depôts—Montreal, in Canada; York factory, on Hudson's Bay; and Fort Vancouver, upon the Columbia river. Each of these chief posts is the centre of a number of inferior posts. The goods from Montreal generally pass through Fort William, on the north-west shore of Lake Superior. Several vessels, and also a steamboat, are employed by the company upon the north-west coast. Goods for the trade are imported to Fort Vancouver direct from London, and the furs collected at that post are annually shipped to the British metropolis. The rivers and inlets of the regions under the company's charter west of the Rocky mountains swarm with salmon, and other varieties of fish. The Hudson's Bay Company has a trading post at the Sandwich Islands, and has also rented some of the posts belong to the Russian company.

The value of furs collected in 1828, according to returns made, was about 200,000*l*. The shares of the corporation had increased from forty per cent below par, to 140 per cent above par. The annual value of the peltries exported from America by the Hudson's Bay Company between 1827 and 1833, exceeded 200,000*l*. Mr. Wyeth estimated the value of furs collected in the territories west of the Rocky mountains, by the company, at 138,000 dollars, for which were only paid about 20,000 dollars' worth of goods at the prime cost, the services of 350 men, and two years' interest on the investment.

EXPORTS in 1831.

The North American Fur Company have but few posts on the west side of

the Rocky mountains. Its agents procure nearly all their furs themselves, by trapping; and trade but little with the Indians. Three or four hundred hunters and trappers remain in that country, who repair during each summer to the places of rendezvous, carrying their furs on their backs, or on pack-horses, where they meet the caravans from the United States. The principal places of rendezvous for the American traders are on Green river, a branch of the Colorado, at the foot of the Rocky mountains, and at Pierre's Hole. A portion of the American fur traders are also stationed round the great lakes, at the posts formerly occupied by the old French and English companies; and a large quantity of fish is taken by them annually in the waters of Lake Superior, which are shipped, together with the furs collected, to New York. The quantity of furs collected annually by the American Fur Company, we are not able to state; but it must be great, from the quantity exported, exclusive of the home consumption.

The success of the Rocky Mountain Fur Company, which had advanced into the west, soon excited the emulation of the American Fur Company; Mr. Astor, its founder, having retired in consequence of his age, the concerns of the company were left under the direction of Mr. Ramsay Crooks. A competition soon sprang up between the two companies, for the trade with the mountain tribes, upon the head waters of the Columbia, and other tributaries of the Pacific.

The character of the men engaged as hunters and trappers in the fur trade throughout the extreme north-west, is peculiar. The trade is not carried on now, as in former times, by batteaux and canoes, under the old French and English system. The fur animals have disappeared before the advance of settlers along the shores of the lakes and rivers; and the great bulk of the fur trade has been transferred to the mountain regions. The traders transport their goods, or furs, upon pack-horses, or carry them on their own backs. They move from place to place on horseback, sometimes conveying their traps upon their shoulders through deep ravines, or up steep precipices. The life of the trapper is therefore a course of toil, deprivation, and excitement.

Fort Vancouver, belonging to the Hudson's Bay Company, is situated on the Columbia, about 100 miles from its mouth. It is comprised in a group of buildings enclosed by pickets, which includes a space of about 450 feet. Here there are thirty-four houses, and also workshops for mechanics, and a fort. Near the fort are cabins for labourers, and the connecting buildings, a saw-mill, magazine hospital, and a large boat-house near the shore. At this point is also a farm containing 3000 acres of land, cultivated by Canadians and half-breed Iroquois. Four ships ply from the coast, bringing supplies, and returning with furs to London. A steamboat called the *Beaver*, of 150 tons, and with two engines of

thirty horse power, built in London, is employed in navigating the straits from Juan de Fuca to Stickern.

The fur trade has long extended adventure, employment, and excitement to vast numbers; but it appears fated to decline, with the destruction of wild animals, east as well as west of the Rocky mountains. The indiscriminate destruction of those animals, has been obviated in some measure by the Hudson's Bay Company, who have preserved particular tracts. The Russians and the Hudson's Bay Company exclude American vessels from the north-west Pacific coast. The American fur trade, which now ranges west of Lake Superior and the Missouri, towards the Rocky mountains, has changed its principal depôt from Detroit to St. Louis. A writer in the *New York Merchant's Magazine* observes:—

“ An interesting feature of the commerce of St. Louis, is the circumstance that the trade of the American Fur Company, and that of other independent traders, including the fur trade of nearly all the northern and north-western Indians within the jurisdiction of the United States, concentrates at that point. The value, to that city, of the trade in cloths, blankets, and other fabrics used in the traffic, exclusive of annuities, the pay of hands, and the outfit for expeditions, boats, &c., has been estimated, by individuals familiar with the trade, as exceeding 225,000 dollars. It has been computed that the exportation of furs, buffalo-robcs, and peltries, the proceeds of that trade, which go to the Atlantic cities, independently of the home consumption, and the amount sent to the Ohio and other parts of the west, during the year 1841, was between 350,000 dollars and 400,000 dollars; and that the entire fur trade for that year could not fall short of 500,000 dollars. This trade includes the furs and skins that were collected by the various Indian tribes from the Mississippi to the Pacific, and from the Columbia to the California. The American Fur Company, it is well known, was originally incorporated with a capital of 1,000,000 dollars; and into this, as well as the Messrs. Brent's company upon the Arkansas, have been merged several smaller companies. They employ a number of steam and other boats, and several thousands of men. These boats, at least once a year, ascend the Missouri to the mouth of the Yellowstone, freighted exclusively with supplies for trade in furs with the several Indian tribes between the state line and that river, and also with the tribes extending thence to the Rocky mountains and the Pacific. The furs and peltries thus collected through that extensive tract of territory, as well as those purchased by the Mexicans, traverse a considerable portion of the Mississippi and the interior rivers; but the trade has, as is well known, become diverted to other channels, and has suffered substantial drawbacks in consequence of a want of certainty in the plans upon which it has been prosecuted.”

The trade in the skins of wild animals being carried on in every market in Europe, Asia, Africa, and America, and as those animals, whose furs are considered the most valuable, as objects more of luxury than of necessity, are in all countries decreasing in numbers,—the fashion, or taste, for furs must either diminish in proportion, or the price must advance in the same ratio, as the furs most sought for become rarer.

The foll wing tables are compressed from official returns:—

SKINS of the Hudson's Bay Company exposed for Sale in London.

CHAPTER XXI.

AMERICAN TRADE OVER THE PRAIRIES, AND WITH S. A. F. F.

THE account given by Mr. Gregg, recently published, of this adventurous branch of commerce is remarkably interesting. He observes,

"A tour on the prairies is certainly a dangerous experiment for him who would live a quiet contented life among his friends and relations at home; not so dangerous to life or health, as prejudicial to his domestic habits. Those who live pent up in our large cities, know but little of the broad, unembarrassed freedom of the great western prairies. Viewing them from a snug fireside, they seem crowded with dangers, labours, and sufferings; but once upon them, and these appear to vanish and are soon forgotten."

His pages are enthusiastic on prairie life, and abound with predilections for the mustang and the buffalo, the little prairie dogs, wild colts, and still wilder, Indians. He has repeated his journeys to New Mexico eight times; and observes,

"The overland trade between the United States and the northern provinces of Mexico, seems to have had no very definite origin; having been rather the result of accident than of any organised plan of commercial establishment. For a number of years its importance attracted no attention whatever. From Captain Pike's narrative, we learn, that one James Purseley, after much wandering over the wild and then unexplored regions west of the Mississippi, finally fell in with some Indians on the Platte river, near its source in the Rocky

mountains; and obtaining information from them respecting the settlements of New Mexico, he set out in company with a party of these savages, and descended, in 1805, to Santa Fe, where he remained for several years—perhaps till his death. It does not appear, however, that he took with him any considerable amount of merchandise.

"Although Captain Pike speaks of Pursley as the first American that ever crossed the desert plains into the Spanish provinces, it is nevertheless related by the same writer, that, in consequence of information obtained by the trappers, through the Indians, relative to this isolated province, a merchant of Kaskaskia, named Morrison, had already despatched, as early as 1804, a French Creole, by the name of La Lande, up Platte river, with directions to push his way into Santa Fe, if the passage was at all practicable. This emissary was perfectly successful in his enterprise: but the kind and generous treatment of the natives overcame at once his patriotism and his probity. He neither returned to his employer, nor accounted for the proceeds of his adventure. His expansive intellect readily conceived the advantages of setting up in business for himself upon this 'borrowed' capital; which he accordingly did, and remained there, not only unmolested, but honoured and esteemed till his death, which occurred some fifteen or twenty years afterward—leaving a large family, and sufficient property to entitle him to the fame of *rico* among his neighbours."

Mr. Gregg should have added, and of *rogue*, amongst honest men.

The Santa Fé trade appears to have attracted very little notice until the return of Captain Pike. In 1812, an expedition was fitted out under the auspices of Mac Knight, Beard, Chambers, and several others, who followed the directions of Captain Pike across the western wilds to Santa Fé. They considered that the declaration of independence by Hidalgo, in 1810, had completely removed the injurious restrictions upon all foreign intercourse, except by special permission from the Spanish government. Hidalgo had some time before been arrested and executed, the royalists had regained the ascendancy, and all foreigners, particularly Americans, were now viewed with suspicion. Mac Knight and his associates were, immediately on their arrival, seized as spies, their goods confiscated, and the leaders were shut up in the *calabozos* of Chihuahua, where most of them were imprisoned for nine years, when Iturbide set them at liberty. Two of the party are said to have, in 1821, returned to the United States over the mountains and prairies, and, by a canoe down the Canadian branch of the Arkansas. The reports which they promulgated induced a merchant of Ohio, named Glenn, who, at the time, had an Indian trading-house near the mouth of the Verdigris river, to embark in the Santa Fé trade. He proceeded up the Arkansas towards the mountains, and encountered great labour and privation, but reached Santa Fé in safety, with his caravan, at the end of 1821.

During the same year, Captain Becknell, of Missouri, with four companions, went out to Santa Fé by the western prairie route. They started from the vicinity of Franklin, for the purpose of trading with the Comanche Indians; but having met accidentally a party of Mexican rangers, near the mountains, the former were prevailed upon to accompany the latter to Santa Fé, where they realised for their small stock of goods, a large profit. Up to this date New Mexico had received all her supplies from the internal provinces by the way of Vera Cruz;

but at such exorbitant rates, that common calicoes, and even bleached and brown domestic goods, sold as high as two to three dollars per *vara* (or Spanish yard of thirty-three inches).

The favourable reports brought by Becknell, stimulated others; and early in May following, Colonel Cooper, from the same neighbourhood, accompanied by several others, set out with 4000 to 5000 dollars' worth of goods, which they transported upon pack-horses. They proceeded to Taos, where they arrived safely with their goods.

It is from this period (1822) that the established commencement of the Santa Fé trade may be dated. In 1824, a company of traders, about eighty in number, among whom were several men of intelligence from Missouri, employed pack-mules, and twenty-five wheeled vehicles, of which two were stout road-waggon, two carts, and the rest Dearborn carriages; the whole conveying from 25,000 to 30,000 dollars' worth of merchandise. The caravan reached Santa Fé with much less difficulty than was anticipated from a first experiment with wheeled vehicles.

The early traders seldom experienced any molestation from the Indians, and generally crossed the plains in detached bands, each individual rarely carrying more than 200 or 300 dollars' worth of stock. This peaceful trade did not last long; and the traders are said not to have been innocent of having instigated the hostilities of the natives.

Since the commencement of the Santa Fé trade, returning parties have performed the homeward journey across the plains with the proceeds of their enterprise, partly in specie, and partly in furs, buffalo rugs, and animals.

The established post, or *entrepôt*, for depositing the goods brought on the voyage upwards by the Missouri, for the Santa Fé trade, is the town of Independence, situate about twelve miles from the Indian border, and two or three south of the Missouri river. The caravans generally start in the month of May. The ordinary supplies for each person are usually as follows: about fifty pounds of flour, as many of bacon, ten of coffee, and twenty of sugar, with a little salt, biscuits, beans, &c.; the plentiful herds of buffalo to be met with throughout the journey, affording an ample supply of fresh meat. The waggon are drawn by eight mules, or oxen, the former being now generally preferred, on many accounts, to horses, except when occasionally used for hunting in the chase. Oxen have been found to retain their strength far longer than the mules in these expeditions, especially when they had to pass through muddy or sandy places, yet they fail when the grass becomes drier and shorter, and, on this account, mules have been more generally employed.

"It is usual for the traders at first to move off in detached parties, till they reach Council Grove, about ten days' journey, the rendezvous where they become organised into a general body or *caravan*, for their mutual defence and security during the remainder of their journey. Travellers suffer more loss and annoyance from the straying of cattle during the

first 100 miles, from the neglect in properly looking after them, than at any subsequent period; the frequent surprisals of the Indians rendering greater vigilance, in this respect, afterwards indispensably necessary. After leaving Council Grove, not a single human habitation—not even an Indian wigwam, it seems, greets the vision of the prairie adventurer."

The name given to this spot is stated by Mr. Gregg to have resulted from the stipulated payment of some 800 dollars, in merchandise, having been paid to some bands of the Osages, in 1825, by the United States commissioners, Reeves, Sibley, and Mathas, for insuring the suspension of hostile invasion of these wild "sons of the soil" upon the traders in Santa Fé.

"Having entered the name of every member of the company, with the number of waggons, &c., and elected a captain for the command, with a lieutenant to its several divisions—a precaution essentially requisite, as these expeditions frequently number 100 waggons, and a corresponding complement of men with their rifles, including some small mounted cannons, they proceed upon their travels."

Mr. Gregg prepared the following table of the value of merchandise invested in the Santa Fé trade, from 1822 to 1843 inclusive; and the portion of the same transferred to the southern markets (chiefly Chihuahua) during the same period; together with the approximate number of waggons, men, and proprietors engaged each year. The table is not given as perfectly accurate, yet he believed it to be about as nearly so as any that could be made out at the present day. The column marked "Proprietors" presents the whole number engaged each year. He observes that,—

"At first, almost every individual of each caravan was a proprietor, while of late the capital has been held by comparatively few hands. In 1843, the greater portion of the traders were New Mexicans, several of whom, during the three years previous, had embarked in this trade, of which they bid fair to secure a monopoly. The amount of merchandise transported to Santa Fé each year, is set down at its probable cost in the eastern cities of the United States. Besides freights and insurance to Independence, there has been an annual investment, averaging nearly twenty-five per cent upon the cost of the stocks, in waggons, teams, provisions, hire of hands, &c., for transportation across the prairies. A large portion of this remaining unconsumed, however, the ultimate loss on the profit has not been more than half of the above amount. Instead of purchasing outfit, some traders prefer employing freighters, a number of whom are usually to be found on the frontier of the Missouri, ready to transport goods to Santa Fé, at ten to twelve cents per pound. From thence to Chihuahua the price of freights is six to eight cents, upon mules, or in waggons. The average gross returns of the traders has rarely exceeded fifty per cent upon the cost of their merchandize, leaving a net profit of between twenty and forty per cent; though their profits have not unfrequently been under ten per cent; in fact, as has before been mentioned, their adventures have sometimes been losing speculations.

"From 1831 to the present date, prices have scarcely averaged, for medium calicoes, thirty-seven cents, and for plain domestic cottons, thirty-one cents per yard. Taking assortments round, 100 per cent upon United States costs were generally considered excellent sales: many stocks have been sold at a still lower rate. The average prices of Chihuahua are equally low, yet a brisker demand has rendered this the most agreeable and profitable branch of the trade.

"The first attempt to introduce American goods into the more southern markets of Mexico from Santa Fe, was made in the year 1824. The amounts were very small, however, till towards the year 1831. For a few of the first years, the traders were in the habit of conveying small lots to Sonora and California; but this branch of the trade has, I believe, latterly ceased altogether. Yet the amounts transferred to Chihuahua have generally increased; so that for the last few years, that trade has consumed very nearly half of the entire imports by the Missouri caravans.

"The entire consumption of foreign goods in the department of Chihuahua, has been estimated, by intelligent Mexican merchants, at from two to three millions annually; the first cost of which might be set down at nearly one half. Of this amount the Santa Fe trade, as will be seen from the accompanying table, has not furnished a tenth part; the balance being introduced through other ports, viz.: Matamoros, whence Chihuahua has received nearly half its supplies—Vera Cruz, via the city of Mexico, whence considerable amounts have been brought to this department—Tampico, on the Gulf of Mexico, and Mazatlan, on the Pacific, via Durango, whence the imports have been of some importance—while nearly all the west of the department, and especially the heavy consumption of the mining town of Jesus-Maria, receives most of its supplies from the port of Guaymas on the Gulf of California; whence, indeed, several stocks of goods have been introduced as far as the city of Chihuahua itself. In 1840, a large amount of merchandise was transported directly from the Red river frontier of Arkansas to Chihuahua; but no other expedition has ever been made in that direction.

"By far the greatest portion of the importations through the seaports, has been made by British merchants. It is chiefly the preference given to American manufactures, which has enabled the merchandise of the Santa Fe adventurers to compete in the southern markets, with goods introduced through the seaports, which have had the benefit of the drawback. In this last respect our traders have laboured under a very unjust burden.

"In point of revenue, Santa Fe has been of but little importance to the government of Mexico. Though the amount of duties collected annually at this port has usually been 50,000 to 80,000 dollars, yet nearly one-half has been embezzled by the officers of the customs, leaving an average net revenue of perhaps less than 40,000 dollars per annum.

"It is not an unimportant fact to be known, that, since the year 1831, few or none of the difficulties and dangers which once environed the Santa Fe adventurer have been

encountered. No traders have been killed by the savages on the regular route, and but few animals stolen from the caravans. On the whole, the rates of insurance upon adventures in this trade should hardly be as high as upon marine adventures between New York and Liverpool."

The valley of the Río del Norte, extending about 100 miles north, and 150 miles south of Santa Fé, seems remarkable for its beauty, richness of produce, and diversity of soil.

"Whatever is thrown into its bosom," says Mr. Gregg, "if the early autumn frosts permit it to ripen, grows to a wonderful degree of perfection—crops have often yielded over a hundredfold. This exuberance of soil is not, however, common to New Mexico generally, but rather proper to its valleys. The temperature is uniformly genial and moderate—a sultry day at Santa Fé, is of rare occurrence. The atmosphere is of extraordinary dryness, owing most probably to the great elevation of the plains about the Rocky mountains.

"Cotton is but little cultivated here, although it has been considered indigenous to the country, the early manufactures of the aborigines proving the fact, especially in this province. Tobacco is also a native plant; but, owing to the monopolising influence of the government, its culture is not deemed worthy of much notice by the inhabitants. Flax is likewise entirely neglected, as also the potato, another indigenous plant.

"The New Mexicans are celebrated for the manufacture of coarse blankets, which is an article of considerable traffic between them and the southern provinces, as also with the neighbouring Indians; and, on some occasions, with the United States. The finer articles are curiously woven in handsome figures of various colours. These are of different qualities, the most ordinary being valued at about two dollars apiece, while those of the finest texture, especially their imitations of the *Sarape Navajo*, will sell for twenty dollars, or more. There have been also made in New Mexico a few imitations of the *Sarape Saltillo*, the blanket of Saltillo, a city of the south, celebrated for the manufacture of the most splendid fancy blankets, singularly figured with all the colours of the rainbow. These are often sold for more than fifty dollars each. What renders the weaving of the fancy blankets extremely tedious is, that the variegation of colours is all effected with the shuttle; the texture, in other respects, being perfectly plain, without even a twill. An additional value is set upon the fine *sarape*, on account of its being a fashionable substitute for a cloak. Indeed, the inferior *sarape* is the only over-dress used by the peasantry in the winter.

"Besides blankets, the New Mexicans manufacture a kind of coarse twilled woollen stuff, called *gerga*, which is checkered with black and white, and is used for carpets, and also by the peasantry for clothing; which, in fact, with some other similar domestic stuffs, together with buckskin, constituted almost the only article of wear they were possessed of, till the trade from Missouri furnished them with foreign fabrics at more reasonable prices than they had been in the habit of paying to the traders of the southern provinces. Their domestic textures are nearly all of wool, there being no flax or hemp, and but little cotton spun. The manufacture even of these articles is greatly embarrassed, for want of good spinning and weaving machinery. Much of the spinning is done with the *huso* or *malacate* (the whirlingig spindle), which is kept whirling in a bowl with the fingers, while the thread is drawn. The dexterity with which the females spin with this simple apparatus is truly astonishing.

"I have heard of some still more curious contracts in these measurement sales, particularly in Santa Fé, during the early periods of the American trade. Every thing was sometimes rated by the vara—not only all textures, but even hats, cutlery, trinkets, and so on! In such cases, very singular disputes would frequently arise as to the mode of measuring some particular articles: for instance, whether pieces of ribbon should be measured in bulk, or unrolled, and yard by yard; looking-glasses, cross or lengthwise; pocket-knives, shut or open; writing-paper, in the ream, in the quire, or by the single sheet; and then, whether the longer or shorter way of the paper; and many others."

The editor of the *Independence Journal*, who says he has been at some pains to collect information in regard to the Santa Fé trade,

"Estimates the exports at 400,000 dollars in specie, and buffalo robes, furs, &c., to the amount of 50,000 dollars more. Several of the companies, which came in last spring, have not returned, in consequence of the unfavourable state of the weather. For this reason the exports are much less this year than usual. Four companies went out this year, (1844), taking with them merchandise to the value, at eastern cost, of 200,000 dollars—the insurance, freight to that point, outfits, &c., cost another 100,000 dollars; making the whole sum invested in this trade 300,000 dollars, which would have been increased to 500,000, but for the bad weather. In the four companies there were 160 men, and the outfit for them is stated as follows:—

	Dollars
780 mules, worth each 25 dollars	27,300
60 oxen, " 30 "	1800
5000 lbs. bacon, at 3½ cents	182
30 barrels flour, at 5 dollars	120
90 bushels meal, 30 cents	27
Merchandise, outfit for hands	3500
Harness for teams	2500
Blacksmiths' work	500

Making, altogether, the sum 35,959

exclusive of waggons, waggon sheets, and many other articles purchased at that place. The number of waggons was 92, each costing 180 dollars, many of which were made there; and the total number of waggon sheets was 1300, including blankets to put between them.

"The trade with Santa Fé is thus made to amount to 750,000 dollars; but even this sum is said to be considerably short of what it is in ordinary seasons. The *Independence* editor insists that the trade should no longer be neglected by the government. 'Give us a port of entry; give us the right of drawbacks, and our traders will supply the whole of the provinces of Santa Fé, Chihuahua, Sonora, California, and others, instead of being supplied with British goods through Metamoras, Vera Cruz, and other ports. Instead of the trade being worth half a million of dollars, it will reach to four or five millions.' The east is said to be deeply interested in this trade, as furnishing an outlet for their calicoes and domestics—Missouri is interested; and the editor hopes that Congress will act upon this matter next winter, and give to our traders all the benefits which those of other nations enjoy.

"The waggon-makers of Independence have orders to build seventy-five waggons for the Santa Fé trade, by next spring—only fifty were made the past spring. Several new mercantile establishments have just been located there, and all are doing well. A turnpike-road from Independence to Wayne city, on the river, will be completed as rapidly as possible. All that is wanted to make Independence one of the most important towns in Missouri, is to make it a port of entry, and for the legislature to establish a branch of the bank at that place, to accommodate the traders, and the commerce of the western part of the state."

Some of the gold mines of New Mexico are said to be very productive and valuable, although latterly, Mr. Gregg seems to think, they have been neglected.

CHAPTER XXII.

COASTING AND FOREIGN NAVIGATION AND TRADE OF THE UNITED STATES.

THE COASTING TRADE of the United States of America, includes not only the carrying trade of the products or manufactures of one state to another, as the cotton of the south to the north, and the manufactures of the north and the products of the fisheries to the south; but it comprises also the carrying of foreign

produce and manufactures from the great depôts of New York, Boston, Philadelphia, Charleston, and New Orleans (see trade of those ports), to minor ports of distribution. The whole coasting trade of the United States we know to be of great value from the tonnage which it employs, but we are ignorant of its actual value, as there are no customs' accounts kept between one state and another. Of the value of the coasting trade of England we are in like manner ignorant, from the absence of official accounts being kept of it.

THE FOREIGN NAVIGATION AND TRADE of the United States extends to every maritime country in the world, and the trading enterprise of the citizens of the great republic may be said to exceed even that of the inhabitants of the British empire.—(See *Trade and Navigation between the United Kingdom and the United States.*)

NAVAL ARCHITECTURE.—The early English colonists found it necessary to begin, soon after their first settling in the New England States and in Virginia, the building of boats and coasting vessels; and the Dutch followed the example on the Hudson.

The construction of shipping, whether sailing ships, steam-vessels, or small craft and boats, constitutes one of the most important employments in the country. The vessels of the United States have long been remarkable for their beauty, and for their admirable sailing qualities, and the epithet of *fir built ships* with bits of *striped bunting*, used in a derisive sense, corresponds not with the character of those splendid ships built of the durable tough oak of Virginia and other states;* and which sail proudly over all the oceans of the world.

The details of the tonnage of the United States will be found hereafter in an account of the navigation and trade of the United States.

In 1772, the number of vessels built in the British colonies was 172, tonnage 26,546; viz.:—built in the New England colonies 149, tonnage 18,149. In New York, 15; New Jersey, 1; Pennsylvania, 8; Maryland, 8; Virginia, 7; North Carolina, 3; South Carolina, 2; Georgia, 5.

After the revolution, and when the constitutional government of the United States was established, the ships of the whole union were placed under one general flag.—(See *Commercial Legislation of the United States.*)

By the Colonial Custom House books, kept at Boston by the Inspector-general of the Imports and Exports of North America, and Register of Shipping, it appears, that the amount of tonnage which entered into the provinces, now the United States, from January 5, 1770, to January 5, 1771, was 331,644; and the amount cleared during the same period, was 351,686.—*Lord Sheffield on American Commerce.*

It is well known, that the tonnage at that time, given in to the register, was

* The red and brown cedar which abound in the United States are remarkably durable woods. The red pine is one of the most valuable woods for the decks and ceiling of ships.

about one-third less than the actual tonnage, in order to evade the duties, light money, and expenses. But this was far more than counterbalanced, by the tonnage of the same vessel, being, in many instances, repeated, in consequence of different voyages in the same year. The actual amount of tonnage, employed at that time in the colonial trade, may, therefore, be estimated at about 300,000

This tonnage was owned, first, by persons residing in the European British dominions; secondly, by British merchants, occasionally residing in the colonies; and, thirdly, by native colonial merchants; and, according to an estimate of British statesmen, in the following proportions, in the several colonies:—

COLONIES.	Proportion belonging to British Merchants.		Proportion belonging to Native Colonial Inhabitants.
	Resident in Europe.	Occasionally resident in the Colonies.	
New England	1-8th	1-8th	6-8ths
New York	3-8ths	3-8ths	3-8ths
Pennsylvania	2-8ths	3-8ths	3-8ths
Maryland and Virginia	6-8ths	1-8th	1-8th
North Carolina	5-8ths	2-8ths	1-8th
South Carolina and Georgia	5-8ths	2-8ths	1-8th

The Amount Entered and Cleared in the several Colonies, during the Year above mentioned, was as follows:—

COLONIES.	Entered.	Cleared.	COLONIES.	Entered.	Cleared.
	tons.	tons.		tons.	tons.
New Hampshire	15363	20357	Virginia	41,003	45,179
Massachusetts	62,721	75,784	North Carolina	20,503	21,490
Rhode Island	18,067	20,671	South Carolina	25,504	22,631
Connecticut	16,213	20,763	Georgia	9214	10,604
New York	25,318	26,651			
Pennsylvania	26,901	40,654	Total	130,624	150,145
Maryland	30,177	31,174			

Several of the the colonial ships cleared were sold in Great Britain.

The whole number of vessels belonging to the United States, on the 31st of December, 1830, was 12,256; and of this number, 913 were ships, 1371 brigs, the residue were sloops and schooners. Among this number, 343 were employed in steam navigation, and 1393 of those licensed were under twenty tons, leaving 10,863 over twenty tons' burden.

In 1831, the number of ships built were:—

1. *Registered vessels* employed in foreign trade, viz., sixty-six ships, seventy-two brigs, forty-five schooners, seven sloops, four steam-boats; 45,720 tons. There were sold to foreigners nine ships, twenty-one brigs; thirty-one schooners, and seven sloops; 9750 tons. Lost at sea, nine ships, fifty-three brigs, forty-eight schooners, and three sloops; 17,416 tons. Condemned as being unseaworthy, seven ships, twenty-three brigs, five schooners, and two sloops; 7288 tons: which leaves an increase to be added to the tonnage of 11,236 tons, out of 45,720 registered on foreign service tonnage.

NUMBER of Vessels, and the Seamen Employed in navigating the Same, which belonged to each State and Territory of the United States, on the 31st of December, 1830.

Ship-building in Maine.—"We understand that ship-building has never been carried on so extensively in Maine as during the present season. Many large and valuable ships have been recently launched, and many others are now on the stocks in most of the seaport towns. And these ships are generally built of the best seasoned white oak from the middle states, of fine models, thoroughly fastened, and finished in beautiful style.

"Among the ships now in the stocks, are two at Newcastle, one of 750 tons, and another of 800 tons; these are both elegant specimens of merchant ships. At Bath, the ship *Hannibal*, of 650 tons, is almost ready for launching. The ship *South Carolina*, of 769 tons, was launched some days since, and the ship *Rapahannock* is almost ready for launching. This is the largest merchantman ever built in the United States. Her length on deck is 180 feet, her beam thirty-seven feet, and her depth twenty-three feet four inches, and she measures about 1140 tons! This ship is thoroughly built of Virginia white oak and Georgia pine."—*Boston Mercantile Journal*, 1841.

Ship-building.—"A correspondent of the *Evening Post* communicates the following facts, which he collected at the Novelty Works on Wednesday :—

" There are now building, and in progress of building, at the Ship Yard, on the East River, in this city, and the Navy Yard, Brooklyn, the following vessels :—

[illegible]

Carried forward

565

	Tons.
Brought forward	5665
At Westervelt's yard one ship (contracted for and in progress of building)	950
At Lawrence and Sneedden's yard, by King and Denyke, one brig	800
At Berg's yard, one ship	300
At the Railway, one steamer lengthening and rebuilding	960
Navy Yard, Brooklyn.	300
One steamer for government, about	1,400
Three sloops of war repairing (average about 800 tons each)	2,400
Total	12,715

"There are also building in the city of Brooklyn over 200 dwelling houses, of wood and brick, and brick and stone.

	Tons.
Ships and vessels building	8,615
Repairing	4,100
Total	12,715

Public Sale of Ships at Philadelphia.—"The three following Philadelphia built ships were sold at the Exchange, by Mr. C. J. Wollbert :—

"Ship *Lehigh*, built in 1833, coppered last fall, 585 10-95 tons, stows 7000 barrels of flour, 1100 tons of Canton goods, or 1685 bales of New Orleans cotton, sold for 24,500 dollars, on a credit of four months.

"Ship *Osage*, built in 1835, stows 5500 barrels of flour; 467 39-100 tons, sold for 14,500 dollars, on a credit of four months.

"Ship *Commerce*, built in 1832, measures 439 82-90 tons, stows 6000 barrels of flour, or 1500 bales of New Orleans cotton, was sold for a whaler, and brought 13,300 dollars, four months' credit."—*U. S. Gaz.*, July 15, 1841.

A large Ship.—"We notice in the *St. John New Brunswick Courier*, the launch of the splendid ship *Greenock*, and we believe the largest merchantman ever built in North America. Her dimensions are: length of keel 182 feet, breadth of beam thirty-six feet, depth of hold twenty-three feet and a half, and from figure head to taffrail 225 feet; her measurement will be nearly 1400 feet; and it is supposed she will carry 2400 tons, or 2500 tons of timber and broken storage. Her model and fastenings are on an improved principle, with a beautiful bow and a light stern."

An old Ship.—"The *St. John New Brunswick Herald*. of the 27th of May, 1841, says, 'the curious in naval architecture, may have an opportunity of gratifying their curiosity, by a sight of a vessel now in our harbour; the *Volunteer*, of Hull. This antique specimen of British oak, is 110 years old, and was employed as a transport prior to the taking of Quebec. She is the identical ship in which the immortal Wolfe came to this continent. Should she come in contact now with one of our province built vessels, she would be found a hard nut to crack.'"

DUTIES on the following Materials used in Ship building, in the British and American Tariffs.

BRITISH TARIFF.		AMERICAN TARIFF.
Iron	free	25 dollars per ton, or about 23 per cent.
Copper	10s. per cwt	25 to 30 per cent.
Cordage	6s. per cwt	14 cents per lb., about 10 per cent.
Timber, used in (except oak and fir)	free.	
Oak and fir, foreign	11. 5s. per ton.	All sorts, hewn or sawn, 20 to 30 per cent.
Do, from American colonies	1s. per ton.	
Chains and anchors	15 per cent	About 33 per cent.
Sailcloth	do	7 cents per square yard, or about 20 per cent.
Naval stores	free.	20 per cent ad valorem.

The increase of American tonnage and the decrease of foreign tonnage are more marked in the clearances than in the entries. The foreign tonnage has declined 50,000 tons since 1837, while the American has increased steadily near 400,000 tons, or 331 per cent.

This exhibits a regular increase in the American tonnage, and a falling off in the foreign tonnage. The aggregate of tonnage entered in 1840 was much larger than in any former year.

AMOUNT of American and Foreign Tonnage cleared from the United States for Foreign Countries for five Years

YEARS.	AMERICAN.		FOREIGN.		TOTAL.
	number of vessels.	tons.	number of vessels.	tons.	
1830.....	7383	1,647,680	4083	706,186	2,353,866

About one half of the aggregate amount of tonnage engaged in the export trade is foreign, a large portion of which is British. The American tonnage cleared from the United States in 1835, was greater than in 1843, and the foreign tonnage cleared in 1837 was greater than any year before or since.

STATEMENT of the Tonnage of American Vessels employed in the Trade with Foreign Countries, which entered Inwards and Cleared Outwards, at the Ports of the United States, distinguishing the Trade with each Country in each Year, from 1821 to 1831, and from 1835 to 1841.

CHAPTER XXIII.

FOREIGN TRADE OF THE UNITED STATES OF AMERICA.

During the colonial government of the English settlements in the countries now forming the United States, although the absurd and miscellaneous commercial policy of the rulers and legislators of the British empire limited the navigation, industry, and trading enterprise of the colonists, yet the persevering Anglo-Saxon spirit of the colonists urged them over the seas to every port in the world, except those to which the navigation laws prohibited them to trade.

The following brief chronological sketch will exhibit the progress of the navigation and trade of the old British colonies, and of the United States, until the year 1800.

1607. The first permanent settlement, after various disastrous attempts, established in Virginia.

1609. Henry Hudson, an Englishman in the service of the Dutch, sailed from the Texel in the beginning of this year, with the design of sailing to the East Indies by a north-west course. He entered into the river Manhattan, and departed in October for England. Dutch ships were sent the next year to open a trade with the natives.

1616. Tobacco about this time first cultivated by the English in Virginia.

Four ships sailed from London, and four from Plymouth to New England, from whence they carried cargoes of fish and oil, which were sold with profit in Spain and the Canary islands.

1618. The only commodities exported from Virginia, at this time, were tobacco and sassafras. The use of the plough introduced in Virginia.

1619. Tobacco.—King James prohibited the sale of tobacco, in gross or retail, either in England or Ireland, until the custom should be paid and the royal seal affixed. Twenty thousand pounds of tobacco exported this year from Virginia to England, nearly the whole crop of the preceding year.

1621. *Parliamentary Acts respecting Tobacco.*—The English parliament resolved, "that all foreign tobacco shall be *barred*, but that of Virginia, or any of the king's dominions, shall not be held foreign." A bill, for the restraint of the inordinate use of tobacco passed in May. *No tobacco was to be imported after the 1st of October, 1621, but from Virginia and the Somers isles, and, after that day, none was to be planted in England.* There was to be paid to the king, for custom, *sixpence a pound*, in consideration of the loss he might sustain in his revenue. None was to be sold by the merchant for more than *eight shillings* the pound, but they who should sell tobacco by the pipe, might make the most they could. *This is the first instance of the policy of promoting the importation of the produce of the colonies in preference to the produce of foreign States.*

1622. *Tobacco.*—The tobacco exported from Virginia to England, on an average, for seven years previous to 1622, amounted to 142,085 pounds a year.

Fishery.—Thirty-five ships which sailed this year from the west of England, and two from London, to fish on the New England coasts, made successful voyages.

Limit on the Trade to New England.—The Plymouth company complained to King James of the encroachments and injuries of interlopers on their American commerce and possessions, and applied to him for relief. The king issued a proclamation, commanding that none should frequent the coasts of New England but the adventurers and planters, or traffic with the Indians, otherwise than by the licence of the council of Plymouth. Chalmers says, "This remarkable edict, far from proving beneficial to the company, really brought on its dissolution."

1624. *Fishing.*—About fifty English ships sailed in the spring of this year, to fish on the coasts of New England.

1626. *Newfoundland Fishery.*—The coast of Newfoundland, for several years frequented by about 250 sail of English vessels, estimated at 15,000 tons, employing 5000 persons, and an annual profit of about 135,000*l.* sterling.

1627. *Trade of the Colony of Plymouth.*—The governor and others hired the trade of the colony for six years; and for this privilege, together with the *shallop* and the *pinnow* built at Mowmet, undertook to pay 1800*l.* and all other debts of the planters; to bring over to them 50*l.* a year in hoes, shoes, and sell them for corn at six a bushel; and, at the end of the term, to return the *monopoly* to the company.

1628. *Dutch Trade with Plymouth.*—A Dutch bark, from Manhattan, arrived at Plymouth, New England. After this commencement of trade, the Dutch often sent goods to the same place, and a traffic was continued for several years. The Plymouth colonists exchanged tobacco for liens, stuffs, and other articles.

1631. *Corn made a Legal Tender.*—In Massachusetts, the court of assistants ordered, that corn should pass for payment of all debts at the usual rate for which it was sold, unless money were expressly named.

1633. *Trade in Connecticut.*—Several trading vessels sailed up the Connecticut river in the course of the year.

1639. *Act to Encourage the Fishery.*—The legislature of Massachusetts passed an act, to free from all duties and public taxes, all property employed in catching, curing, or transporting fish.

1641. *Trading Post at Narraganset.*—Richard Smith purchased of the *Sachems*, a tract of land in the Narraganset country, distant from the English settlements; erected a house of trade, and entertained all passing travellers.

1642. *Trading Post at the Delaware.*—The colonists of New Haven sent agents, who purchased of the natives several tracts of land on both sides of Delaware bay and river, and then erected a trading post. Kieft, the Dutch governor of New Netherland, without any previous notice, sent forth his soldiers, who burned the trading post, and seized the goods at the Delaware.

Iroquois Trade with the Dutch.—The Iroquois carried a considerable trade with the Dutch at Albany, who gave the Iroquois in return fire-arms, ammunition, &c.

1645. *Impost on Wines, &c.*—The general court of Massachusetts levied an impost on wines and strong liquors, for the pay of government, the maintenance of fortifications, and the protection of the harbours.

Iron Works at Lynn.—The general court of Massachusetts this year granted liberty to make iron. An iron work was begun in Lynn.

Virginia Currency.—The legislature of Virginia prohibited dealing by barter, and established the Spanish piece of eight, at six shillings, as the standard currency for that colony.

1646. *Impost on Exports from Connecticut.*—In a contract made in 1644, between George Fenwick and the agents of the colony of Connecticut, it was stipulated, that a certain duty on corn, biscuit, beaver, and cattle, exported from the river's mouth, should be paid to Fenwick for the space of ten years. This agreement was confirmed the succeeding year by the legislature, which, at the same time, passed an act, imposing a duty of twopence per bushel on all grain, sixpence on every hundred weight of biscuit, and a small duty on all beaver skins exported from the mouth of the river during the same period.

1646-7. *Origin of the Navigation Act.*—By an ordinance of the lords and commons of England, all merchandise, goods, and necessities, for the American plantations, were exempted from duty for three years, on condition that no ship or vessel, in any of the colonial ports, be suffered to land any goods of the growth of the plantations, and carry them to foreign ports, excepting in English bottoms.

1647. *Trade with the West Indies.*—A trade opened this year between New England and Barbadoes, and other islands in the West Indies, profitable to the colonists, and enabling them to make payments in England.

1651. *Navigation Act.*—The parliament of England passed the famous navigation act. It enacted, "That no merchandise, either of Asia, Africa, or America, including also the English plantations there, should be imported into England, in any but English built ships, and belonging either to England, or English plantation subjects, navigated also by an English commander, and three-fourths of the sailors to be Englishmen, excepting such merchandise as should be imported directly from the original place of their growth or manufacture, in Europe solely; and that no fish should, thenceforward, be imported into England or Ireland, nor exported thence to foreign ports, nor even from one of their own home ports, but what should be caught by their own fisheries only." This act was evaded at first by New England, which still traded in all ports, and enjoyed the peculiar privilege of importing their goods into England free of customs.

1652. *Mint in Massachusetts.*—A mint was erected this year in New England for coining money. The money coined was shillings, sixpences, and threepences. The law enacted, that 'Massachusetts' and a tree in the centre, be on one side, and 'New England' and the year of our Lord, and the figures XII, VI, III, according to the value of each piece, be on the other side. The several coins had N. E. on one side, and the number with the year 1652 on the other. This date was never altered, though more coin was stamped annually for thirty years.

1655. *Change in the Virginia Currency.*—The Virginia legislature changed the Spanish piece of eight from six shillings to five shillings sterling, as the standard of its currency.

1660. *Navigation Act altered and confirmed.*—The navigation act of 1651, continued, with additions. It enacted, that no sugar, tobacco, ginger, indigo, cotton, fustic, dying-woods, of the growth of the English territories in America, Asia, or Africa, shall be transported thence to any other country, than those belonging to the crown of England, under the penalty of forfeiture; and all vessels sailing to the plantations were to give bonds to bring said commodities to England. The most submissive colonists considered the act as grievous, and contrived various methods to evade it.

1662. *Mint in Maryland.*—The assembly of Maryland besought the proprietary to make order for setting up a mint, and a law was passed for that purpose. "The great hindrance to the colony in trade for the want of money, is assigned as the reason for the measure. It was enacted, that the money coined shall be of as good silver as English sterling; that every shilling, and so in proportion for other pieces, shall weigh above ninepence in such silver; and that the proprietary shall accept of it in payment of his rents and other debts. This coin being afterwards circulated, the present law

was confirmed among the perpetual laws of Maryland, in 1676. This law and that of Massachusetts are the only laws for coining money which occur in colonial history previous to the American revolution.

1663. *Monopoly of the Colonial Trade*.—An act of parliament was passed this year to monopolise the colonial trade for England. It prohibited the importation, into any of the English colonies, in Asia, Africa, or America, of any commodities of the growth, production, or manufacture of Europe, except they were laden or shipped in England, Wales, or the Town of Berwick-upon-Tweed, and in English built shipping, and to be carried directly to the said colonies, with an exception of salt for the fisheries, wines from Madeira and Azores, and all sorts of victuals from Scotland and Ireland. Under this act, the colonists could obtain no European goods, but through the ports of England. A draw-back of the duties, however, was generally allowed on the exportation of those goods to the colonies.

1665. *Massachusetts Shipping*.—The number of ships and vessels belonging to the colony was about eighty, from twenty to forty tons; about forty, from forty to 100 tons; and about twelve ships, above 100 tons.

1669. *Hudson's Bay Company*.—Charles II. gave to Prince Rupert, and several lords, knights, and merchants, associated with him, a charter, under the title of "The Governor and Company of Adventurers of England, trading into Hudson's Bay." The entire sum which constituted the original funds of the company, amounted only to 10,500*l*.

1671. *Board of Trade and Plantations*.—A board of commissioners of trade, &c., was established this year. The first act of this board was the drawing up of a circular letter to the governors of all his majesty's plantations and territories, in the West Indies and islands belonging to them. Evelyn, a member of the board, says, "What we most insisted on, was to know the condition of New England, which appearing to be very independent as to their regard to England or his majesty, rich and strong as they now were, there were great debates in what style to write them, for the condition of that colony was such, that they were able to contest with all other plantations about them, and there was a fear of their breaking from all dependence on this nation."

1672. *Duties laid by Parliament on the Colonies*.—The parliament, considering the colonies as proper objects of taxation, enacted, that if any vessel, which by law may trade in the plantations, shall take on board any commodities, and a bond with sufficient security shall not have been given to unlade them in England, there shall be rendered to his majesty, for sugars, tobacco, ginger, cocoa-nut, indigo, logwood, fustic, cotton, wool, the several duties mentioned in the act. The duties of tonnage and poundage had been imposed and extended to every dominion of the crown, at the restoration, but this was the first act which imposed customs on the colonies, to be regularly collected by colonial revenue officers.

1676. *Custom of Tobacco*.—The whole custom of tobacco from Virginia, collected in England this year, was 135,000*l*. Maryland tobacco was probably included.

1678. *New York Exports and Imports*.—The annual exports, besides peas, beef, pork, tobacco, and peltry, were about 60,000 bushels of wheat. The annual imports were to the value of about 50,000*l*.

1681. *Commerce and Customs of Portsmouth*.—During the year ending with April, 1681, there were entered as Portsmouth, New Hampshire, forty-nine vessels, from ten to 150 tons' burden. The amount of the provincial customs, levied at that port during the same year, on wines and liquors, and one penny a pound of the value on the first cost of goods imported, was 61*l*. 3*s*. 1*d*. This was money of the province, which was of less value than sterling, thirty-three and one-third per cent.

1682. *Trade of Pennsylvania*.—A publication appeared this year, entitled, "The Articles of the Free Society of Traders in Pennsylvania, agreed upon by divers Merchants for the better Improvement and Government of Trade in that Province."

1683. *Carolina*.—To remedy the distress felt, by want of a common measure of commerce, the parliament of Carolina 'raised the value of foreign coins,' and suspended all prosecutions for foreign debts. The currency of Carolina became, in consequence, much depreciated. The second measure, though at first confirmed by the proprietaries, was

afterwards dissented from, "because it was contrary to the king's honour, since it was in effect to stop the course of justice; because the parliament had no power to enact a law so contrary to those of England."

1686. *New York*.—The city incorporated by a charter. The shipping belonging to the city of New York had increased to nine or ten three-masted vessels, of about eighty or ninety tons; 200 ketches or barks of about forty tons; and about twenty sloops of twenty-five tons.

1690. *First Paper Money in the Colonies*.—The government of Massachusetts issued bills of credit as a substitute for money.

1694. *Annapolis made a Port Town*.—The town of Severn, Ann county, in Maryland, was made a port town, and the residence of a collector and naval officer, and received the name of Annapolis.

1695. *Rice in Carolina*.—The planting of rice was introduced about this time into Carolina.

1696. *Shipping of New York*.—The shipping of New York at this time, consisted of forty ships, sixty-two sloops, and sixty boats.

Board of Trade and Plantations.—King William erected a new and standing council for commerce and plantations, styled, the lords commissioners for trade and plantations. With this board, the governors of the American colonies were obliged to hold a constant correspondence; and to this board, they transmitted the journals of their councils and assemblies, the accounts of the collectors of customs, naval officers, &c.

1699. *Wool Manufactures of America*.—Complaints being made in England, that the wool and woollen manufactures of North American plantations began to be exported to foreign markets, formerly supplied by England, a law was passed, by which no person might export in ships, or carry by horses, into any other place or colony out of the king's dominions, any wool or woollen manufactures of the English plantations in America, under forfeiture of ships and cargoes, and also of 500*l.* penalty. This is the first notice in the English statute laws of woollen manufactures in the colonies.

1700. *Population of Boston*.—Boston, at this time, contained about 1000 houses and above 7000 souls.

1701. *Duty imposed by Carolina*.—The assembly of Carolina, imposed a duty of three-farthings a skin, exported by residents, but double if sent out in English vessels.

Newfoundland Fishery employed this year 121 vessels, collectively, amounting to nearly 8000 tons' burden.

1702. *First Paper Currency of Carolina*.—A bill was passed by the provincial assembly, for stamping bills of credit which were to be taken up in three years by a duty laid upon liquors, skins, and furs. This was the first paper currency issued in Carolina. For five or six years after its emission, it passed in the country at the same value and rate with the sterling money of England.

1703. *Culture of Silk in Carolina*.—Sir Nathaniel Johnson about this time introduced the culture of silk into Carolina, but the planters considered rice their staple commodity.

1704. *Rhode Island Tonnage Duty*.—The legislature of Rhode Island imposed a tonnage duty on all vessels not wholly owned by the inhabitants of that colony.

Regulation of Coins.—The colonies, experienced great inconveniences from the difference in the value of the same coin. Queen Anne published a proclamation "for settling and ascertaining the current rates of foreign coin, in her majesty's plantations in America.

1712. *Bank Bills issued*.—South Carolina established a public bank, and issued 48,000*l.* in bills of credit, called bank bills, to be lent out at interest on landed or personal security, and to be taken in gradually at the rate of 4000*l.* a year. Hewatt says, "Soon after the emission of these bills, the rate of exchange and the price of produce rose, and in the first year advanced 150, in the second 200 per cent."

1713. *Connecticut*.—This colony had scarcely any foreign commerce at this time. Its principal trade was with Boston, New York, and the West Indies.

1714. *The First Schooner* is said to have been built about this time, at Cape Ann, by Captain Andrew Robinson.

1715. *Boston Lighthouse*.—The legislature of Massachusetts passed an act for erecting a lighthouse on Beacon Island, at the entrance of Boston harbour.

Pig and Bar Iron began about this time to be made in Virginia.

1716. *Exports from the Mississippi*.—Two ships went to France, richly laden, from the river Mississippi; and these were the first which carried over any merchandise from the Louisiana colony since its settlement.

Fish from Newfoundland.—From the Newfoundland fishery, there were exported this year, to Spain, Portugal, and Italy, 106,952 quintals of fish.

1717. *New Orleans Founded*.—In expectation of great advantages from the trade and commerce of Louisiana, the French this year founded New Orleans.

The Trade of Massachusetts employed 3493 sailors and 492 ships, of 25,406 tons.

1718. *Import Bill of Massachusetts*.—An import bill was passed by the legislature of Massachusetts, which laid a duty, on West India goods and wines, and on English manufactures, and a duty of tonnage on English ships. The duty on English goods was one per cent. Before the session in May, next year, the governor received instructions from the king to give all encouragement to the manufactures of Great Britain, and afterward received a reprimand from the lords justices, the king being absent, for consenting to the duty on English goods, &c. The court, on receiving official notice of this reprimand, "readily acknowledged the exceptions taken to that clause in the bill, were just and reasonable."

1719. *Lotteries Suppressed*.—Massachusetts passed an act for suppressing lotteries.

1720. *Trade with the French Prohibited*.—An act was passed for prohibiting the sale of Indian goods to the French.

Tea began to be used in New England about this time.

North-west Passage Attempted.—The Hudson-Bay Company sent out Captains Dwight and Barlow, with a ship and a sloop, for the purpose of making discoveries and finding a passage to China, by the north-west parts of America; but they were never heard of afterwards.

1722. *Trading-House Erected at Oswego*.—Governor Burnett, of New York, in order to command Lake Ontario, for the benefit of the fur trade and the friendship of the Six Nations, and to frustrate the commerce of the French, erected a trading-house at Oswego, in the country of the Senecas.

1723. *Pennsylvania Paper Currency*.—This province issued in March 15,000*l*. It made no loans but on land security, or plate, deposited in the loan-office; obliged the borrower to pay five per cent; made its bills a tender in all payments, on pain of confiscating the debt, or forfeiting the commodity; imposed penalties on all persons who presumed to make any bargain or sale on cheaper terms, in case of being paid in gold or silver; and provided for the gradual reduction of the bills, by enacting that one-eighth of the principal, as well as the whole interest, should be annually paid. The advantage of this first issue, induced the government, in the latter end of the year, to issue a further sum of 30,000*l*. on the same terms.

1724. *Trade of Carolina*.—There were this year imported into South Carolina, 493 slaves; also British goods and manufactures, to the value of between 50,000*l*. and 60,000*l*. sterling.

From the different harbours of Newfoundland there were exported this year, in fifty-nine vessels, 111,000 quintals of fish.

1727. *Act Respecting Salt*.—The parliament of England passed an act for the importing of salt into Pennsylvania, by British ships, regulated by the acts of navigation, for curing fish, in like manner as was allowed to New England and Newfoundland.

1728. *Exports from Carolina*.—The province was divided this year into two distinct governments, North and South Carolina. The exports of rice from South Carolina, during ten years, were 26,488 barrels, about 44,081 tons.

All the acts of Governor Burnett, for the prohibition of the trade between Albany and Montreal, repealed by the king.

1730. *Whale Fishery, &c*.—The whale fishery on the North American shores must, about this time, have been very important; for there arrived in England, from these coasts, in the month of July, 9200 tons of train and whale oil, and 154 tons of whalebone. During

the first fifteen days of July, there arrived at London, from the American sugar colonies, upwards of 10,000 hogsheads of sugar, and 15,000 gallons of rum, and half as much more was computed to have been carried to Bristol, Liverpool, and Glasgow.

Exports from the Colonies.—Iron and copper ore, bees'-wax, hemp, and raw silk, the products of Virginia, were first exported from that colony to Great Britain; 50,000 weight of hemp, raised in New England and Carolina, were exported to England; seventy-two bags of wool, the product of Jamaica, St. Christopher's, and other West India islands, were exported thither, and great quantities of peltry, by the Hudson's Bay Company "All these articles," says Anderson, in his *Annals*, "excepting the last, were entirely new, and mostly unexpected productions, in those colonies."

1731. *Commercial State of Massachusetts.*—The colony of Massachusetts contained, this year, 120,000 English inhabitants. Its trade employed about 600 sail of ships and sloops, of at least 38,000 tons, one-half of which traded to Europe. Its fisheries employed from 5000 to 6000 men. There were, at the same time, in New England, eight furnaces for hollow-ware, and nineteen forges.

1732. *Corn and Tobacco a Legal Tender.*—The legislature of Maryland, this year, made tobacco a legal tender, at one penny per pound, and Indian corn at twenty-pence per bushel.

1733. *Exports from Carolina.*—There were exported this year from South Carolina, 36,584 barrels of rice, 2802 barrels of pitch, 848 barrels of turpentine, sixty tons of lignum vitæ, twenty tons of brazilletto wood, twenty-seven tons of sassafras, and eight chests of skins.

1735. *The Population of Massachusetts* was, 138,427.

1736. *Trade of the Colonies.*—Maryland employed 130 sail of ships in its trade. The net product of tobacco, exported from that colony and Virginia, amounted, in value, to 210,000*l.*, and the annual profit to the mother country, from that trade, was estimated at 500,000*l.* The arrivals at the port of Philadelphia, this year, were 211, and the clearances 215. The arrivals at the port of New York were 211, and the clearances 222.

1739. *Scheme for Taxing the Colonies.*—During the British war with Spain, a scheme for taxing the British colonies was submitted to Sir Robert Walpole. "I will leave that," said the minister, "for some of my successors, who may have more courage than I have, and be less a friend of commerce than I am. It has been a maxim with me, during my administration, to encourage the trade of the American colonies in the utmost latitude. Nay, it has been necessary to pass over some irregularities in their trade with Europe; for, by encouraging them to an extensive growing commerce, if they gain 500,000*l.* I am convinced that, in two years afterwards, full 250,000*l.* of their gains will be in his majesty's exchequer, by the labour and product of this kingdom. As immense quantities of every kind go thither, and as they increase in their foreign American trade, more of our produce will be wanted. This is taxing them more agreeably to their own constitution and ours." The British parliament, however, passed an act, this year, for more effectually securing the trade of the British to America.

1741. *Massachusetts.*—There were now on the stocks in this state about forty top-sail vessels, of about 7000 tons. In Marblehead there were about 160 fishing schooners, of about fifty tons each.

1742. *The Entries at Philadelphia*, this year, were 230, and the clearances 281.

1743. *The Shipping of New England*, about this time, is said to have consisted of at least 1000 sail, exclusive of fishing barks. Ship-building, one of the principal branches of the trade of Boston, declined about this period.

Indigo.—The culture of indigo was introduced into South Carolina, by Miss Lucas. The cultivation of this valuable plant, being considered of importance, some indigo-seed was soon after imported from the West Indies, where it had been already cultivated with success and profit. At first the seed was planted as an experiment; and it was so successful, that several planters turned their immediate attention to the culture of indigo.

1744. *Trade of New Orleans.*—At the port of New Orleans, in Louisiana, several vessels came from Florida, and Havanna, and the Bay of Campeachy, to trade for boards, lumber, pitch, drygoods, and live-stock, to the value of 150,000 dollars.

Trade of South Carolina.—At the port of Charleston, 230 vessels were loaded, this year, and 1500 seamen were employed in the trade of the province.

1745. *Benjamin Franklin* published an account of his new invented fireplaces.

1747. *Tobacco.* On a medium of three years, there were exported to England, from the American colonies, 40,000,000 of pounds' weight of tobacco.

1748. *Bounty on Indigo.*—The parliament passed an act, for allowing a bounty of sixpence per pound on all indigo raised in the American plantations, and imported directly into Great Britain from the place of its growth.

Trade of Boston, Portsmouth, and Newport.—This year, 500 vessels cleared out from the port of Boston, for the foreign trade; and 430 entered inwards, exclusive of coasting and fishing vessels. The clearances from Portsmouth, New Hampshire, were 121, and the entries seventy-three, besides about 200 coasting sloops and schooners. The clearances from Newport, Rhode Island, were 118, and the entries fifty-six.

1749. *Entries and Clearances* at Boston, Philadelphia, and New London, this year, were as follows :—Boston, 489 entries, and 504 clearances; Newport, thirty-seven entries, and sixty-two clearances; Philadelphia, 303 entrances, and 291 clearances.

1750. *The Entries at New York,* were 232, and the clearances 283. Eight vessels cleared from Georgia, and the exports with which they were freighted, were valued at 2004*l.* sterling.

1751. *Commerce of Perth Amboy.*—The entries at this port, the capital of New Jersey, at that time, were forty-one, and the clearances thirty-eight. There were exported 6424 barrels of flour, 168,000 pounds of bread, and 17,941 bushels of grain, besides other commodities.

Flax-seed.—Six waggons, loaded with this article, came from the upland parts of Maryland into Baltimore.

Ginseng was found at Stockbridge, Massachusetts. It grew in abundance in that township, and in the adjacent wilderness.

1753. *Exports from North Carolina,* this year, amounted to 60,000 barrels of tar, twelve barrels of pitch, 10,000 barrels of turpentine, and about 30,000 deerskins, besides lumber and other articles.

1754. *Exports from South Carolina,* were, this year, 104,682 barrels of rice, and 215 pounds of indigo, which, together with naval stores, provisions, skins, lumber, and other products, amounted to the value of 240,000*l.* sterling. Cotton is also mentioned as an article of export.

The Massachusetts Marine Society was incorporated by an act of the legislature.

1755. *Population of the Colonies.*—Maryland contained 180,000 inhabitants, Rhode Island, 35,939, and New England, 436,936.

1764. *Parliament* passed an act for granting certain duties in the British colonies and plantations in America. This was the first act of the British parliament that ever was passed, in which the object of raising a revenue was directly expressed. It was intitled the sugar and molasses act.

1765. *Sugar Act.*—The sugar act, passed in 1764, restricted the intercourse which the American colonies had enjoyed with the West Indies, and caused general discontent.

The Stamp Act.—Parliament this year passed an act for raising revenue by a general stamp duty in all the American colonies. About 250 members in the house of commons voted for it, and fifty only against it. In the house of lords it passed unanimously, without debate, and obtained the royal assent. It caused the greatest discontent in the colonies. The stamp officers resigned; vessels sailed from ports as before; and the courts of justice, though suspended a while, in most of the colonies, at length proceeded to business without stamps.

1766. *The Stamp Act* repealed, by a majority of 275 to 167.

Salem Marine Society instituted for the assistance of distressed mariners and their families, promoting navigation, preserving and communicating all discoveries and occurrences in the voyages of its members, and receiving plans to facilitate the navigation of the port of Salem.

1767. *Duties.*—Parliament passed an act, imposing a duty to be paid by the colonists,

on paper, glass, painters' colours, and teas, imported into the colonies. Also an act, establishing a custom-house and a board of commissioners in America.

1768. *Non-Importation Agreement of Merchants.*—In August, the merchants and traders of Boston, generally, subscribed a paper, in which they engaged not to import, nor purchase any kind of goods or merchandise, imported from Great Britain, from January, 1769, to January, 1770, excepting a few enumerated articles; nor to import, nor purchase of any, who shall import from any other colony in America, within that time, any tea, paper, glass, or other goods, commonly imported from Great Britain. The Connecticut, Salem, and New York merchants, entered into similar agreements.

1769. *The Legislature of Virginia*, after being dissolved by the governor, met and adopted resolutions against importing British goods. This example was followed in other colonies, and the non-importation agreement became general.

Colonial Trade.—The trade of Great Britain with her colonies, on the continent of America, on an average of three years ending 1769, employed 1078 ships and 28,910 seamen. The value of goods exported from Great Britain during the average of the same years, was 3,370,000*l.*; and of goods exported from the colonies to Great Britain and elsewhere, 3,924,606*l.*

Grape Cultivated—The vine successfully cultivated at this time in Virginia.

1770. *Act to Repeal Duties, except on Tea, &c.*—The British merchants who traded to America sustained immense losses by the non-importation of their goods; and presented petitions to parliament, stating their losses, and praying for its intervention. On the 5th of March, Lord North proposed a bill for the repeal of part of the act of 1767, which laid a duty on glass, paper, and painters' colours, but continuing that part of the law which exacted a duty from tea. He said he brought forward that bill to prevent the continuance of the dangerous combinations which the imposts had produced in America, and the losses and dissatisfactions which they had caused among the merchants at home. He contended that the act was just as a claim, but unproductive of revenue. "The articles taxed," he said, "being chiefly British manufactures, ought to have been encouraged, instead of being burdened with assessments. The duty on tea was continued, for maintaining the parliamentary right of taxation. An impost of threepence in the pound could never be opposed by the colonists, unless they were determined to rebel against Great Britain. Besides, a duty on that article, payable in England, and amounting to nearly one shilling in the pound, was taken off on its exportation to America, so that the inhabitants of the colonies saved ninepence in the pound." He understood not the principles and feelings of the American colonists. They opposed the right of parliament to tax them far more than the tax itself. The members in opposition urged the injustice and inexpediency of taxing America, and the evils which had arisen from the attempt; but Lord North carried his bill by a large majority.

1772. *The Exports from Georgia*, in 217 vessels, amounted to 121,677*l.* sterling.

1773. *Duty on Tea resisted.*—The British government, determined to carry into execution the duty on tea. The warehouses of the East India Company contained about 17,000,000 lbs. of tea, for which there was no market. The East India Company were authorised by law to export their tea, free of duties, to all places whatever; by which regulation, tea would sell cheaper in America than before it had been made a subject of revenue. The new ministerial plan was considered as a direct attack on the liberties of the colonists, which it was the duty of all to oppose; and it was very generally declared that, whoever should, directly or indirectly, countenance this dangerous invasion of their rights, would be considered an enemy to his country. The East India Company freighted several ships to the colonies with tea, and appointed agents for its sale. Some cargoes were sent to New York; some to Philadelphia; some to Charleston, South Carolina; and three to Boston. The citizens of New York and Philadelphia sent the ships back to London. The inhabitants of Charleston unloaded the tea and placed it in cellars, prohibited its use, and left it to be thoroughly damaged. None of it was ever used.

Tea destroyed at Boston.—The citizens of Boston resolved to send back the tea ships. The captains of the ships had consented, if permitted, to return with their cargoes to England; but the consignees would not discharge them from their charter parties; the custom-house refused to give them a clearance; and the governor would not grant them a

passport for clearing the fort. It was known that the tea would be gradually landed from the ships lying so near the town; and that, if landed, it would be disposed of. To prevent this, a number of armed men, disguised like Indians, boarded the ships and threw their whole cargoes of tea into the dock.

The entries at the port of Boston, this year, were 587; the clearances, 411.

1774. *Boston Port Bill*.—Intelligence of the destruction of the tea at Boston was communicated on the 7th of March, in a message from the throne to both houses of parliament. The conduct of the colonists was represented, as not merely obstructing the commerce of Great Britain, but as subversive of the British constitution. Without a hearing on the part of the colonists, a bill was passed, by which the port of Boston was legally precluded from the privilege of landing and discharging, or of lading and shipping goods, wares, and merchandise; and every vessel within the points of Alderton and Nahant, was required to depart within six hours, unless laden with food or fuel. This act, which shut up the harbour of Boston, was speedily followed by another, entitled "An Act for the better regulating the government of Massachusetts." The object of this act was to alter the charter of the province, so as essentially to abridge the liberties of the people. In the apprehension that, in the execution of these acts, riots would take place, and that trials for murders, committed in suppressing them, would be partially decided by the colonists, it was provided by law, that if any person were indicted for murder, or for any capital offence committed in aiding magistracy, the governor might send the person, so indicted, to another colony or to Great Britain, to be tried. These three acts were passed in immediate succession. "By the first," said the colonists, "the property of unoffending thousands is arbitrarily taken away, for the act of a few individuals; by the second, our chartered liberties are annihilated; and by the third, our lives may be destroyed with impunity."

On arriving, copies of the port bill were quickly multiplied and circulated over every colony, and excited simultaneous indignation. At Philadelphia, a subscription was set on foot for such poor inhabitants of Boston as should be deprived of the means of subsistence by the operation of the act. The Virginia House of Burgesses resolved, "that the 1st day of June, the day on which the operation of the port bill was to commence, should be set apart by the members as a day of fasting, humiliation, and prayer, devoutly to implore the Divine interposition, for averting the heavy calamity which threatened destruction to their civil rights and the evils of a civil war; to give them one heart and one mind, firmly to oppose, by all just and proper means, every injury to the American rights." On the publication of this resolution, the royal governor, the Earl of Dunmore, dissolved them; but, previously to their separation, eighty-nine of the members signed an agreement in which they declared, "that an attack, made on one of our sister colonies, to compel submission to arbitrary taxes, is an attack made on all British America, and threatens ruin to the rights of all, unless the united wisdom of the whole be applied." They also recommended to the committee of correspondence to communicate with the several committees of the other colonies, on the expediency of appointing deputies to meet annually in general congress, to deliberate on those measures which the united interest of America might from time to time require.

On the day designated by the port act business was finished at Boston at twelve o'clock at noon, and the harbour shut up against all vessels. The day was devoutly kept at Williamsburg, in Virginia, as a day of fasting and humiliation. In Philadelphia, it was solemnised with every manifestation of public grief; the inhabitants shut up their houses, and, after divine service, "a stillness reigned over the city, which exhibited the appearance of a general mourning, or of the most solemn Sabbath." In most other places it was observed as a day of mourning.

1775. *Bill for restraining the Commerce of New England*.—Lord North moved for leave to bring in a bill to restrain the trade and commerce of the provinces of New Hampshire, Massachusetts, Rhode Island, and Connecticut, to Great Britain, Ireland, and the British islands in the West Indies; and to prohibit those provinces from carrying on any fishery on the banks of Newfoundland, and other places to be mentioned in the bill, under certain conditions, and for a limited time. After much opposition in both houses, the bill was carried by a large majority.

Bill for restraining the Trade of the Middle and Southern Colonies.—Soon after

parliament had passed the bill for restraining the trade of New England, intelligence was received, that the inhabitants of the middle and southern colonies were supporting their northern brethren in every measure of opposition, a bill was in consequence brought in and passed for imposing similar restrictions on the colonies of East and West Jersey, Pennsylvania, Maryland, Virginia, South Carolina, and the counties on the Delaware. The omission of New York, Delaware, and North Carolina, in this bill, was considered in America as calculated to promote disunion; but the three exempted colonies scorned to accept the favour, and voluntarily subjected themselves to the same restraints as were imposed on the other colonies.

1777. *Bibles to be imported.*—It having been found, upon inquiry, that the proper types for printing the Bible were not to be had in America, and that the paper could not be procured but with great difficulties and risk, Congress directed the committee of commerce to import 20,000 copies of the Bible.

1781. *Bank of North America established.*—A national bank was instituted this year, projected by Robert Morris, one of the delegates of Pennsylvania, whom Congress had appointed treasurer. The capital of 400,000 dollars, he divided in shares of 400 dollars each, in money of gold or silver, to be procured by subscriptions. Twelve directors were to manage the bank, which was denominated by Congress, "The President, Directors, and Company of the Bank of North America." To the financial skill of Mr. Morris the country was greatly indebted. Under his able management public credit revived; the army was paid; and public operations maintained in the field and the cabinet.

1784. *Trade of New Haven.*—The foreign trade of New Haven, which had been destroyed by the late war, revived. The number of vessels belonging to the port, engaged in the West India and foreign trade, amounted to thirty-three; of which number one was a ship of 300 tons, four were square rigged vessels, or brigs; the others, sloops of sixty to 110 tons.

First United States Voyage to China.—The *Empress of China*, a ship of 360 tons, commanded by John Green of Boston, sailed from New York in February for Canton, and returned the following year. This was the first voyage from the United States to China.

1785. *Treaty with Prussia.*—A treaty of amity and commerce was concluded between the King of Prussia and the United States.

1786. *Act for a Mint.*—An act was passed by the legislature of Massachusetts, for establishing a mint for the coinage of gold, silver, and copper.

1788. *Card Manufactory.*—A card manufactory was set up in Boston, with a newly invented machine, essentially lessening the necessity of manual labour.

Cotton planted in Georgia and Carolina.—Richard Leake, Esq., made an extensive and very successful experiment for the planting of cotton in Georgia. Several planters in Georgia and Carolina followed the example with success. The black cotton seed was brought about this time into Georgia from the Bahamas.

1789. *Barrell's Sound.*—Barrell's Sound, on the north-west coast of America, visited by Captain Gray in the *Washington*.

1791. *Bank of the United States.*—The United States Bank, with a capital of 10,000,000 dollars, was established at Philadelphia, by the style of "The President, Directors, and Company of the Bank of the United States." The revenue of the United States was 4,771,200 dollars; and the expenditure, 3,798,436 dollars.

Exports from New York.—The exports from New York to foreign parts amounted 2,505,465 dollars.

Commerce of Providence.—The number of sail of vessels belonging to the county of Providence, in Rhode Island, was 129; the tonnage was 11,942.*

First Export of Cotton from the United States.—The first bale of cotton, of American growth, was exported this year from the United States to England.

Cotton Spinning.—A factory for spinning cotton by water power was put in operation by Samuel Slater, at Pawtucket, in Rhode Island.

1792. *United States Mint.*—Congress passed an act for establishing a mint, and regulating the coins of the United States.

* In 1764, there belonged to the same county fifty-four sail of vessels, of 4320 tons.

Banks.—The South Carolina Bank, the Bank of Pennsylvania, and the Bank of New Hampshire established. The Union Bank in Boston incorporated.

Exports of Charleston.—The exports from Charleston, South Carolina, this year, were estimated at 2,917,979 dollars.

Culture of Silk.—The rearing of mulberry-trees and silk-worms, and the culture of silk, so far succeeded in Connecticut, that a minister in Branford had a silk gown made for him this year at his own house. This was the first clergyman's gown made in America.*

Revenues of the United States.—The revenues of the United States estimated at 3,700,000 dollars. The tonnage of vessels which paid duty in the ports of the United States, between the 1st of October, 1791, and the 30th of September, 1792, including the coasting and fishing vessels, was upwards of 800,000 tons.

1793. *Navigation of New York.*—There entered the port of New York 683 vessels from foreign ports, and 1381 coasting vessels.

Exports of the United States.—The exports of the United States were estimated at upwards of 26,000,000 dollars.

1795. *Exports.*—The value of exports of the United States amounted to upwards of 47,000,000 dollars. The net value of imports and tonnage was nearly 8,000,000 dollars.

Charleston and Baltimore.—The first vessel from Carolina for the East Indies, sailed this year from Charleston. The value of imports to Baltimore was upwards of 5,000,800 dollars. There arrived at Baltimore, this year, 109 ships, 162 brigs and snows, and 5464 bay craft.

1797. *Exports and Post office.*—The value of exports from the United States amounted to 57,000,000 dollars. The mails of the United States were carried over 14,385 miles of territory; in which space there were upwards of 480 post-offices. The revenue of the post-office, this year, was 46,000 dollars.

1798. *Protection of Commerce.*—An act was passed more effectually to protect the commerce and coasts of the United States. This act was passed in May. In June, Congress passed an act to authorise the defence of the merchant vessels of the United States against French depredations.

1800. *Bankruptcy.*—Congress enacted a law for establishing a uniform system of bankruptcy.

Census, Shipping, and Post-office.—By the second census, the number of inhabitants was 5,305,482. The shipping of the United States amounted to 939,000 tons. The revenue of the post-office was 80,000 dollars.

Canal.—Santee canal, extending twenty-two miles between Santee and Cooper rivers, began to be passed through by boats. It cost the proprietors above 600,000 dollars; a sum exceeding seven times the amount of what the province sold for seventy-two years before."

1800 to 1845. Since the commencement of the present century, the progress of American navigation and trade will be found illustrated in the preceding and following tables. (*See also Commercial and Financial Legislation of England and America.*) The United States, for the first fifteen years, experienced some of the evils of European warfare, and, in common with England and the British possessions, the calamity attendant upon a war, which with more wisdom on the part of the respective governments, never would have occurred.

In advocating commercial freedom between nations, we have always done so, believing that the greater the international trade and consequent interests, the stronger were the bonds for a lasting peace. During the last thirty years, peace has happily subsisted between the mother land and America.

* Stiles, Lit. Diary. The Rev. Jason Atwater, minister of Branford, showed the gown to Dr. Stiles, who writes: "He raised and manufactured the silk from his own trees and worms." On the 20th of January, 1791, Dr. Stiles "saw a pair of silk stockings, woven at Norwich, in a loom made there—weighed four ounces—white. Also, a handkerchief made at Northford, two ounces and a half; both made of silk raised in New Haven and Northford."

IMPORTS and Exports of the United States for Fifty-five Years, Payments into the Treasury, and Cost of collecting Revenue.—For Details of the several States, see each State.

Carried forward	1170.7 "	219.7 "			

Aggregate of American tonnage, entering and clearing, as per table, No. I..... 25.0 millions tons.
Ditto Foreign..... 11.4 " "
2013.1 millions dollars, Foreign cargoes to 25 millions American tonnage; 80.5 to 1 dollars.
378.7 millions dollars, Foreign cargoes to 11.4 millions Foreign tonnage; 33.4 to 1 dollars.

NOTE.—The amounts of this table slightly vary from the statement of tables No. I. and II., because the fractions are not fully given. The ratio of cargo to tonnage is also calculated without reference to fractions.

RATIO of Tonnage, American and Foreign, to Value of Cargoes in three different years, selected out of each term of ten years, computed without accurate reference to fractions.

FIRST TERM.

Y E A R S.	A M E R I C A N.			F O R E I G N.		
	Dollars.	Tons.	Ratio.	Dollars.	Tons.	Ratio.
1821.....	113 millions of cargo.....	to 1.5 millions	75 to 1	14.2 millions of cargo.....	to 0.16 millions	90 to 1
1825.....	195 do.	to 1.8 do.	108 to 1	15.1 do.	to 0.18 do.	84 to 1
1830.....	144 do.	to 1.9 do.	75 to 1	14.7 do.	to 0.26 do.	57 to 1

SECOND TERM.

Y E A R S.	A M E R I C A N.			F O R E I G N.		
	Dollars.	Tons.	Ratio.	Dollars.	Tons.	Ratio.
1831.....	159.3 millions of cargo.....	to 1.9 millions	84 to 1	25 millions of cargo.....	to 0.55 millions	45.5 to 1
1835.....	229.3 do.	to 2.7 do.	85 to 1	42 do.	to 1.30 do.	32.3 to 1
1840.....	198.3 do.	to 3.2 do.	62 to 1	40.6 do.	to 1.46 do.	29 to 1

NOTE.—This table exhibits a very remarkable increase of the ratio of Foreign tonnage to the value of the cargo; showing how much the carriage of the bulky commodities of export has increased in Foreign vessels. In 1821, the Foreign tonnage carried 90,000,000 dollars' worth of cargo in 1,000,000 of tons; in 1840, it carried 29,000,000 dollars' worth of cargo in 1,000,000 tons—showing that the Foreign tonnage is rapidly getting possession of that branch of our carrying trade which requires the greatest amount of shipping, and which is, therefore, the most valuable to navigation.

STATEMENT of the Commerce of each State and Territory, commencing on the 1st day of October, 1820, and ending on the 30th day of September, 1821.

SUMMARY Value of Imports.

I M P O R T S.	1841	1842	1843*	1844
dollars.	dollars.	dollars.	dollars.	dollars.
Value of imports	127,946,177	100,162,087	64,763,799	108,435,036
Deduct specie	4,986,633	4,087,016	22,319,335	5,830,429
Value of merchandise imported.	122,957,544	96,075,071	42,434,464	102,604,606

* Nine months.

There has been a great decrease in the importation of certain manufactures, the demand for which has been chiefly supplied by home manufactures.

IMPORTATION of Manufactured Goods into the United States during the Years 1840, 1841, 1842, and 1844, leaving out 1843, as the returns were for only nine months, and cannot be correctly compared with the other years :—

				Total.....	92,900,996	77,793,783	99,715,179

* Nine months only, which excludes comparison for 1843.

Of the aggregate value of the exports, 69,706,375 dollars were shipped in American vessels; and 30,008,804 dollars in foreign vessels. More than one-half the value of exports from the United States in 1844, consisted of the single article of cotton. Tobacco comes next, and then flour.

TABLE exhibiting the Value of Imports from, and Exports to, each foreign Country, during the Year ending September 30, 1842, and nine Months ending June 30, 1843.

* This column is erroneously footed 8,397,255 dollars in the printed document, being 27 dollars too little.

† This column correctly foots 5,080,827 dollars—the difference of 27 dollars arises from the discrepancy in the tobacco column.

"The above table embraces a period of the complete operation of four general tariffs, viz.: the tariff of 1824, the high protective tariff of 1828, that of 1832, and the compromise act of 1833. From 1821 to 1830 the banking movement in the United States was remarkably steady. The loans of the United States Bank, which was the governing power, varied in all that time scarcely 3,000,000 dollars. The consequence was that every increase of the duties checked imports in a marked degree. In 1828 the imports were large previous to the operation of the tariff. In the two succeeding years they fell off immensely. In 1831, they began to feel the impulse of the bank movement. From 1830 to 1833, the national bank extended its loans from 40,000,000 dollars to 66,000,000 dollars, or sixty-five per cent in two years. This movement of the 'regulator' was followed by that of all the banks in the union, and by a combination of circumstances the inflation, with some drawbacks, continued to the great explosion of 1836-7; from which time the general movement of banks has been that of curtailment. From 1821 to 1825, the whole imports into New York rose 34,000,000 dollars, of which 26,000,000 dollars was in the port of New York. Under the tariff which came into operation in that year, the imports fell off 17,000,000 dollars in 1827; of which 9,000,000 dollars was in the port of New York. Under the tariff of 1828, a further fall of 9,000,000 dollars in 1830 took place; of which 6,000,000 dollars was in the port of New York. From that year up to 1836, under the bank expansion, a total increase in imports of 119,000,000 dollars took place; 83,000,000 dollars, or nearly eighty per cent of the amount, was in New York. Down to 1841, under decreasing duties, but a contracting currency, a decrease of 82,000,000 dollars took place; 68,000,000 dollars, or eighty-three per cent of this was in New York—an immense falling off in business. These facts show, concisely, that the two causes operate powerfully upon the welfare of New York, more than upon the rest of the union, viz.: a high tariff and a dear currency. Under the contracting currency with decreasing duties, the trade of New York fell off from 1839 to 1840, seventy-seven per cent. She has now to encounter a still further reduction of the currency, added to duties meant to be protective. Under such circumstances it is fair to conclude that the imports will be carried back to the grade, at least, of 1830, viz.: 70,000,000 dollars, or about 36,000,000 dollars in New York; and this at a time when the connexion of Boston with the western country, by railroad, has revolutionised the trade in domestic goods, and has withdrawn from New York a large commission business."—*Hunt's Magazine*.

CHAPTER XXIV.

NAVIGATION AND TRADE BETWEEN THE UNITED STATES AND THE UNITED KINGDOM.

THE commercial intercourse between the United Kingdom and the United States of America, is confined to the vessels of the respective countries, including the colonial possessions. This is much upon the same principle as before the independence of the Anglo-American colonies: excepting that the British crown subjected the colonial carrying trade with foreign countries to restrictions that were palpably unwise and unjust, though strictly in the narrow spirit of the Navigation act. Since the revolution, the ships of the United States trade to all the countries in the world.—(See *Commercial Legislation of England and the United States hereafter.*)

The early details of the trade between Great Britain and her colonial possessions were by no means attended to. Some accounts of entrances and clearances, and notices of the imports, were kept by the customs department, and from these the following tables have been compiled.

The accounts of the tonnage employed are mixed up with that engaged in the North American fisheries, and in the circuitous trade with the West Indies. It comprised a great share of the whole British navigation beyond the seas.

From the date of first passing the navigation law in 1660, in which act the exclusive restrictions to be observed in the trade and navigation of the plantations in America is declared, we have but scanty information respecting the commerce of the North American colonies until 1670, when we find they supplied the sugar plantations with cattle, hogs, flour, timber, slaves, and other lumber; and that "in time of dearth," the plantations of New York, New Jersey, and Pennsylvania, supplied even Britain and Ireland with corn.

In 1703, a law was passed to encourage the growth and importation of naval stores from the North American colonies—and an active trade appears to have been carried on between England and these plantations, and between the latter and the West Indies. A very profitable trade from the North American plantations was carried on with the foreign West Indies, which was most unwisely attempted to be stopped, by British West Indian interests obtaining a British act of parliament, framed in 1733, imposing nearly prohibitive restrictions on that trade, although the proceeds and profits of which were nearly all remitted to England in payment for manufactures. The value of exports from Great Britain to North America, on an average of the three first years of King William's reign, is stated by Chalmers, at 395,619*l*. The imports at 339,138*l*.; the population in 1715, that is 130 years ago, at 375,750 whites; 58,850 negroes. Total 434,600.

That trade was paralysed for some time, but not suppressed. It was beyond the power of mere acts of parliament to annihilate so profitable a commerce: especially that carried on by British merchants, from England, through the North American colonies, to the French and other foreign West Indies, until 1665, when Mr. Grenville, a man of great integrity, but of contracted mind, and a most blundering commercial legislator, converted the gallant commanders of his majesty's ships of war, on the American and West India, as well as on the British coasts, into sworn revenue officers for the enforcement of restrictive navigation.

The profitable trade from the North American plantations in supplying the French, Spanish, and Danish West Indies, with British manufactures and colonial provisions and stores, was consequently, during the following year, almost annihilated by the wicked interference of Mr. Grenville. Grievous, indeed, was the consequent infliction upon British trade and navigation—and unfortunate the effects finally caused by the just, but unredressed, complaints of the North American colonists.* Their grievances were only attended to by an attempt to

* Macgregor's British America.

increase their burdens—by extending to them the Stamp act—which they effectually resisted under the title of “*The folly of England and the ruin of America.*”

In a letter from one of the New England colonists to the Board of Trade and Plantations, printed in the year 1715, concerning the trade, it is asserted, “That one fleet only from New England brought home 6000 barrels of pitch, tar, and turpentine to London. Ships of late we build very well, both for beauty and strength. Even so early as this time, we find our sugar colonies complaining of New England’s great trade to the Dutch colony of Surinam, which they now supply with vast numbers of small horses, and with provisions, fish, &c., and in return took their molasses, which they made into rum.”

In the year 1740, it appears from the information given to the Board of Trade by persons concerned in the two British colonies of Virginia and Maryland, that about 200 British ships were annually and constantly employed in that trade, viz., “about eighty or ninety sail to Virginia, and about 110 to 120 to Maryland; that the ships trading thither from the outports of Great Britain were generally of a lesser burden than were those from the port of London: and that of about 30,000 hogsheads of tobacco, annually imported from those two colonies into Great Britain, 18,000 were brought home in the London ships. Also that this computation was exclusive of the vessels employed by those two colonies in their trade with the other British continental and island colonies of America.”

* The official values at average prices computed at average prices in the year 1694 are absurdly erroneous: and have been merely returned by the customs, under the supposition that they form the best index as to the relative quantities exported from the United Kingdom. We have arranged the above table as an approximate view of the relative quantities exported to the United States of America.

STATEMENT made to Congress, by the American Government, of the Trade between the United States of America and the United Kingdom.

Value of foreign imports into the port of New York during the year 1844, viz.: free merchandise, 9,716,588 dollars; specie and bullion free, 1,111,364 dollars; dutiable merchandises, 64,921,263 dollars;—duty paid on the latter, 21,457,830 dollars.—Total value of imports, 75,748,720 dollars.

CHAPTER XXV.

NAVIGATION AND TRADE BETWEEN THE UNITED STATES AND BRITISH POSSESSIONS IN NORTH AMERICA AND THE WEST INDIES.

THE commercial intercourse between the colonies now forming the Atlantic States of America, and the British colonies in the West Indies, was of great value before the declaration of independence.

On the termination of peace this trade might have increased to the reciprocal advantage of the United States and of the British colonies, if the wise policy brought forward by Mr. Pitt, in 1783, had not been thwarted by Lord Sheffield and others, and if the most illiberal orders in council had not been, instead, pro-

mulgated; and which nearly paralysed this trade until somewhat more liberal measures were brought forward in 1830, and legalised in 1831. In respect to the American trade with the West Indies, the ports of the latter were open to United States vessels on the payment of differential duties, from 1795 to 1807.

Incalculably great would have been the navigation and trade, and the consequent bonds of material and peaceful interests, if the maritime and trading intercourse of Great Britain and Ireland, with the whole of Anglo-America, including the United States, British North America, and the British West Indies, had been established upon the free basis of a *general coasting trade*.

From 1795 to 1801, the exports from the United States to the West Indies, and the imports from the latter to the former, were as follow:—

Y E A R S.	Exports.	Imports.	Y E A R S.	Exports.	Imports.
	dollars.	dollars.		dollars.	dollars.
1795.....	2,034,664	0,426,091	1799.....	6,285,254	6,083,372
1796.....	5,446,559	6,301,534	1800.....	6,404,785	5,774,411
1797.....	2,147,025	3,045,045	1801.....	9,699,722	6,968,032
1798.....	4,283,940	2,925,739			

During the years 1802, 1803, and 1804, the value of the exports and imports, according to an estimate made by the secretary of the Treasury, was—

Y E A R S.	Exports.	Imports.
	dollars.	dollars.
1802.....	6,228,464	4,486,890
1803.....	5,024,047	4,492,861
1804.....	6,315,667	4,739,186

The Average Annual Trade of the United States, for Three Years, according to the same authority, was as follows:—

I.—*With the dominions of Great Britain in Europe (Gibraltar excepted).*

The annual exports were estimated at about 15,690,000 dollars, viz.:—

Domestic produce.	dollars.	dollars.
Cotton	5,640,000	
Tobacco	3,220,000	
Provisions.....	2,160,090	
Lumber, naval stores, and pot ashes	1,510,000	
All other articles of domestic produce.....	900,000	
		13,430,000
Foreign merchandise		2,260,000
		15,690,000

The annual imports, at 27,400,000 dollars, viz.:—

In merchandise paying duties on its value, embracing, with inconsiderable exceptions, all the woollen, cotton, linen, silk, metal, glass, and paper manufactures	26,060,000
All the articles paying specific duties, and consisting principally of salt, steel, lead, nails, and porter	1,340,000
	27,400,000

II.—*With the British East Indies.*

Annual exports, viz.:—	dollars.
Domestic produce	47,000
Foreign do.	83,000
	130,000

Imports, 3,530,000 dollars, viz.:—	dollars.
In merchandise, paying <i>ad valorem</i> duties, and consisting, principally, of white cottons	2,950,000
In all other articles, consisting, principally, of sugar, pepper, and cotton	580,000
	<hr/> 3,530,000

III.—*With the Northern British Colonies in America.*

The annual exports amount to 1,000,000 dollars, and consist of the following articles, viz.—		
Domestic produce.	dollars.	dollars.
Provisions and live stock	530,000	
Lumber, naval stores, and pot ashes	90,000	
Skins and furs	160,000	
All other articles	60,000	
	<hr/> 840,000	
Foreign merchandise		160,000
		<hr/> 1,000,000
The annual imports amount to 540,000 dollars, viz.:—		
In goods paying <i>ad valorem</i> duties, and consisting principally of merchandize for the Indian trade, and of fish		480,000
All articles paying specific duties		60,000
		<hr/> 540,000*

IV.—*With the British West Indies.*

The exports consisted of the following articles, viz.:—	
Provisions and live stock	4,720,000
Lumber	990,000
All other articles	340,000
	<hr/> 6,050,000
And the imports as follows, viz.:—	
Spirits	2,460,000
Sugar and coffee	1,480,000
All other articles	650,000
	<hr/> 4,590,000

Importations from all Parts of the World.

The annual value of imports, calculated on an average of three years	75,316,000
Of which the value imported from the dominions of Great Britain amounts to	35,970,000
And that imported from all other countries, as follows, viz.:—	
From the northern powers, Prussia and Germany	7,094,000
From the dominions of Holland, France, Spain, and Italy	25,475,000
From the dominions of Portugal	1,083,000
From China, and other native powers of Asia	4,856,000
From all other countries, including some articles not particularly discriminated	838,000
	<hr/> 39,346,000
	<hr/> 75,316,000
The value of the several species of merchandise thus imported was arranged as follows, viz.:—	
1st. Articles (principally imported from the dominions of Great Britain), viz.:—	
Merchandise paying duties on its value	39,489,000
Salt, nails, lead, steel, beer, cheese, shoes, and boots	1,917,000
Rum	3,881,000
	<hr/> 45,287,000
Of which were imported from the dominions of Great Britain...	33,461,000
And from all other countries	11,826,000
	<hr/> 45,287,000

* Not including Plaster of Paris.

2nd. Articles principally imported from other countries, viz. :—	dollars.
Coffee	8,373,000
Sugar	7,794,000
Molasses	1,930,000
Cotton, indigo, pepper, and pimento	2,257,000
Hemp, soap, candles, and all other articles (wines, teas, gin, and brandy excepted)	1,600,000
	<u>21,954,000</u>

Of which were imported from the dominions of Great Britain... 2,476,000
And from all other countries..... 19,478,000

21,954,000

3rd. Articles only incidentally imported from Great Britain, viz. :—	
Brandy and Geneva	2,753,000
Wines	2,962,000
Teas	2,360,000
	<u>8,075,000</u>
Of which were the produce of British dominions	33,000
Of all other countries.....	8,042,000

According to Mr. Pitkin—

"In the years 1805, 1806, and 1807, the value of the intercourse was nearly the same as in the three preceding years. The value of the exports, while the ports of these islands were open to American vessels, generally exceeded that of the imports; and as the value of the former was then estimated at the place of exportation, and of the latter at the place of importation, the real difference greatly exceeded that shown by the custom-house books.

"Most of the exports consisted of bulky articles, and the amount of freight and insurance, on some of them, particularly lumber and live-stock, was about equal to the first cost; and the amount of freight and charges of the imports, formed no inconsiderable part of their value, at the place of importation. As American vessels were at that time principally employed in this trade, the profits arising from these sources were chiefly confined to the American merchant and ship-owner. Prior to 1808, a great proportion of American lumber went to these islands. The average quantity of boards and plank, in the years of 1805, 1806, and 1807, was about 40,000,000. In 1802, 1803, and 1804, the value of flour, bread, and biscuit, was about 2,000,000 dollars—of lumber, about 1,000,000 dollars—of beef, pork, bacon, and lard, about 800,000 dollars—and of Indian corn, rye, and Indian meal, about 600,000 dollars. The quantity of rum received in return during the same period, was about 4,000,000 gallons annually, valued at about 2,500,000 dollars."—Pitkin.

OFFICIAL Value of Imports and Exports of the United States with the British North American and West Indian Possessions, and all parts of the World, for 1830 and 1840.

COUNTRIES.	IMPORTS.		EXPORTS.	
	1830	1840	1830	1840
	dollars.	dollars.	dollars.	dollars.
Great Britain	24,519,214	33,737,099	26,329,359	59,317,362
British American Colonies.....	650,303	2,007,707	3,780,373	6,093,250
British West Indies	168,579	1,048,165	1,591	2,965,584
All parts of the world	70,876,920	107,141,519	73,849,508	132,085,946

"During the period that the British West Indian ports were closed against American vessels, an active and profitable trade was carried on by the latter, through neutral ports, with the former.

"The aggregate trade with the British American colonies increased, in the ten years from 1830, from 4,436,676 dollars to 8,601,017 dollars, nearly 100 per cent. The tonnage in that trade increased as follows :—

TONNAGE engaged in the Trade between the United States and the North American Colonies, showing the Increase from 1820.

YEARS.	ENTERED.		CLEARED.	
	American.	Foreign.	American.	Foreign.
	tons.	tons.	tons.	tons.
1820.....	110,821	405	112,223	3,169
1830.....	130,527	4,002	117,171	14,267
1840.....	373,149	387,947	357,073	401,805
Increase from 1830.....	242,622	383,945	239,902	387,538

VALUE of the Imports and Exports of the United States with the British North American Colonies, distinguishing the Tonnage.

YEARS.	IMPORTS.			EXPORTS.		
	American Vessels.	Foreign Vessels.	TOTAL.	American Vessels.	Foreign Vessels.	TOTAL.
	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.
1834.....	1,103,956	444,774	1,548,734	2,448,356	1,126,914	3,535,276
1840.....	1,431,264	576,503	2,007,767	4,191,049	1,908,352	6,109,005
Increase....	327,308	131,729	459,034	1,743,283	781,438	2,564,729

"The increase of 387,945 foreign tons entered the United States, from 1830 to 1841, was merely nominal, the increased value of business in those tons being but 131,729 dollars. This nominal increase in British colonial tonnage forms sixty per cent of the aggregate increase of foreign tonnage in the whole United States, and deducted therefrom, gives an actual increase of foreign trading tonnage of 220,299 tons, against an increase in the same period of 664,682 in American tonnage. Again, it appears that the aggregate business between the United States, the British West Indies, and American colonies, increased, from 1821 to 1830, 1,936,181 dollars, and in the subsequent ten years, 3,563,311 dollars. Hence it appears that the proclamation issued by General Jackson, by removing restrictions on the trade of the colonies, increased the commerce 1,600,000 dollars per annum, sixty-five per cent of which was enjoyed by American vessels. This does not appear to be an evil so great in its influence upon the whole country as to warrant the return to the prohibitory system previously in operation."—*Hunt's Mercantile Miscellanies.*

A. contraband trade between the United States and the British colonies, especially with the North American colonies, is known to be carried on to a very great extent.

STATEMENT of the Tonnage of American Vessels employed in the Trade with the British Possessions, which Entered Inwards and Cleared Outwards, at the Ports of the United States, during the Years 1821, 1831, 1835, and 1841.

* Nine Months, ending June 30th, 1843.

TRADE OF THE UNITED STATES WITH THE BRITISH EAST INDIES.

The trade between the United States and the British East Indies, commenced soon after the peace of 1783. In 1788, 1789, Earl Cornwallis, then governor and commander in India, gave orders, that American vessels should be treated at the Company's settlements, in all respects, as the most favoured foreigners; and the ship *Chesapeake*, one of the first vessels that displayed the American flag in the Ganges, was exempted by the supreme council of Bengal from the government customs, which foreign vessels were bound to pay.

This intercourse was regulated by the thirteenth article of the treaty of November 19th, 1794, and by subsequent legislation.—See *Treaties*.

American ships are also allowed to trade and carry merchandise direct from the United Kingdom to British India, and from both to China. The trade to China from British India, since the opening of the ports of the latter, has been commenced by the citizens and ships of the United States.—See *Trade with China*.

The value of the American trade with the British East Indies, from 1795 to 1801, according to Mr. Pitkin, was as follows:—

YEARS.	Imports.	Exports.	YEARS.	Imports.	Exports.
	dollars.	dollars		dollars.	dollars.
1795.....	742,523		1799.....	1,521,213	7,296
1796.....	2,427,717	66,316	1800.....	3,391,027	130,461
1797.....	1,764,290	21,325	1801.....	5,134,456	71,017
1798.....	2,077,324	39,075			

On an average of the years 1802, 1803, and 1804, the value of the imports was 3,530,000 dollars, and the value of the exports, 130,000 dollars.

From 1821 to 1845, the following was the value of imports and exports:—

YEARS.	IMPORTS.	EXPORTS.		YEARS.	IMPORTS.	EXPORTS.	
		Domestic Pro- duce.	Foreign Pro- duce.			Domestic Pro- duce.	Foreign Pro- duce.
	dollars.	dollars.	dollars.		dollars.	dollars.	dollars.

1832.....	2,538,938	189,218	339,235	1845.....			
1833.....	1,832,050	136,156	168,843				

Prior to the year 1816, much the greatest part of the imports from the British East Indies, consisted of low-priced cotton goods. During the years 1802, 1803, and 1804, the value of these white cottons, imported into the United States, was estimated, on an average, at about 2,950,000 dollars. By the tariff of 1816, all cotton goods, the original cost of which, at the place from whence imported (except nankeens directly from China), was less than twenty-five cents per square

yard, were to be taken and deemed to have cost that sum per square yard, and charged with duty accordingly. This minimum price was fixed for the purpose of excluding entirely from the American market the low-priced Indian cottons, to protect the American planter and manufacturer. But few Indian goods were imported afterwards into the United States, and indigo and silks were the principal articles imported.—See *Tables, 1790 to 1844, inclusive.*

The exports to British India consisted of some flour, whale oil, spermacetti, and tallow candles—manufactured tobacco, timber, &c., and specie—the export of these gradually diminished from 1,930,376 dollars, in 1822, to 98,516 dollars, in 1833.—See *Tables, 1790 to 1844, inclusive.*

CHAPTER XXVI.

TRADE BETWEEN THE UNITED STATES AND CHINA.

THE American trade with China commenced soon after the close of the peace of 1783. The first ship, commanded by Captain Green, from the United States, sailed from the port of New York for Canton, on the 22nd of February, 1784, and returned on the 11th of May, 1785.

The success, as well as novelty, of Captain Green's voyage, attracted no little attention in this country; and the second voyage to this distant part of the world was of a more bold and adventurous character.

Captain Stewart Deane, a citizen of Albany, who had successfully commanded a letter of marque in the early part of the war of the revolution, having had a personal interview with Captain Green on the subject of his voyage, resolved to fit out the sloop *Experiment*, of only eighty-four tons, which he had just built at Albany as a coaster, for this distant voyage; and on the 19th of December, 1785, this navigator, with a crew of only seven men and two boys, sailed in this little bark for Canton. Such a distant voyage, in so small a vessel, was, at that time, considered so extremely hazardous, that no insurance could be effected on the vessel and cargo at any of the offices, either in America or England. The sloop arrived safe at Canton, in May, 1786; where she was, at first, mistaken for a tender to some large ship, which had been left below, in Canton river: and the inhabitants were not a little astonished, to learn that this small vessel, with her Atlantic, Indian, and Chinese crew, had crossed the ocean from the opposite hemisphere:

This daring enterprise insured him, Captain Deane, a hospitable reception at Canton, and particularly at the British factory.

He returned to America in 1787, and was afterwards, for some years, engaged in the same trade, as commander of much larger vessels.

These two first and successful voyages induced others to engage in the trade; and as early as 1789, fifteen American flags arrived at the port of Canton, a greater number than from any other nation, except Great Britain.*

The principal articles imported into the United States from China, have been teas, silks, nankeens, and china-ware. During the late wars in Europe, the Americans, not only supplied their own country, with the article of tea, but shipped large quantities of it to different parts of Europe, to supply the wants of the belligerent nations, who were dependent on neutrals for this, as well as many other necessary foreign articles.

The American trade with China may be divided into that which is *direct* from the United States, and that which is carried on generally, on American account, and embracing not only that between the United States and China, but that also carried on by the Americans between China and other parts of the world.

The amount of the commerce of the United States with China is next to that of Great Britain. And the former, by the ancient British treaty, enjoy all the privileges of the British; and the Americans have also since negotiated a treaty of commerce and navigation.

The following is a statement of the quantities of the several kinds of teas, paying duties (the exports being deducted from the imports), for each year from 1790 to 1800:—

Y E A R S.	Bohea.	Souchong.	Hyson.	Other Green.	TOTAL.
	lbs.	lbs.	lbs.	lbs.	lbs.
1790.....	2,050,684	365,075	530,613	88,870	3,047,242
1791.....	774,008	91,123	107,034	12,932	985,997
1792.....	2,332,892	132,355	115,263	33,498	2,614,008
1793.....	1,548,093	360,687	82,882	8,007	2,009,309
1794.....	2,095,416	298,503	29,754	37,241	2,460,914
1795.....	2,070,687	146,457	99,727	48,247	2,374,118
1796.....	1,778,007	73,578	239,102	219,572	2,310,259
1797.....	1,392,271	185,359	206,177	224,392	2,008,399
1798.....	1,079,139	333,349	194,616	283,861	1,890,965
1799.....	3,412,674	309,598	240,861	538,370	4,501,503
1800.....	1,891,434	694,802	533,613	677,785	3,797,634
Total.....	20,444,205	3,802,806	2,380,542	2,172,975	28,000,648

Making the annual consumption for these eleven years, about 2,500,000 pounds.

The following quantity of teas, of all kinds, was imported and exported, in each year, from 1801 to 1812.

Y E A R S.	Imported.	Exported.	Consumed.	Y E A R S.	Imported.	Exported.	Consumed.
	lbs.	lbs.	lbs.		lbs.	lbs.	• lbs.
1801.....	4,080,960	1,409,253	3,677,707	1807.....	8,108,774	2,663,001	5,445,713

QUANTITY REMAINING ON HAND.—CONSUMPTION.

During the period from 1821 to 1832, the quantities remaining on hand at the end of each year, amounted to 74,914,764 lbs., or an average of 6,242,897 lbs. annually; and from 1833 to 1841, to 114,944,350 lbs., or 12,771,594 lbs. annually—showing a considerable increased consumption, as will appear further by the following statement:—

	lbs.	lbs.
Assuming that the balance on hand at the close of 1820 (for we have no actual data prior to 1821), to be the same as at the end of 1821....		
The imports from 1821 to 1832 were		4,586,223
		92,982,768
		97,568,991
Deduct exports same time	18,068,004	
Also the quantity on hand at the close of 1832	8,627,144	
		26,695,148
Actually consumed in twelve years		70,873,843

	lbs.	lbs.
Or average consumption per annum, from 1821 to 1832.....		5,906,153
Balance on hand at the end of 1832	8,627,144	
Imported from 1833 to 1841.....	134,037,694	
		142,664,838
Deduct—exports same time.....	19,093,341	
Also the quantity on hand at the close of 1841.....	10,899,469	
		29,992,813
Actually consumed in nine years...		112,672,025
Or average consumption per annum, from 1833 to 1841		12,519,113
Showing an increased average consumption since 1833, of per annum		6,612,900

GENERAL View of the Trade between the United States and China, from 1833 to 1841, inclusive.

YEARS.	Number of Vessels.	Tonnage.	Crews, Men and Boys.	Value of Imports.	Value of Teas.
		tons.	number.	dollars.	dollars.
1833.....	41	15,334	765	7,541,570	5,484,003

1835.....	36	13,495	743	5,987,187	4,522,800
1836.....	43	16,445	785	7,324,816	5,342,811
1837.....	42	16,160	738	8,965,337	5,903,054
1838.....	29	11,821	512	4,764,536	3,497,156
1839.....	18	7,392	321	3,678,609	2,428,419
1840.....	35	14,771	593	6,040,829	5,427,010
1841.....	28	11,986	469	3,095,388	3,466,245
Total.....	315	122,954	5701	55,890,499	42,290,033
Value of Teas.....	42,290,033	
Value of rest of cargoes..	13,600,466	

The value of Teas imported, therefore, appears to be annually about 4,698,894 dollars, and to constitute rather exceeding 75 per cent of the value of the whole cargoes;—which have averaged since 1834, 177,430 dollars each. The trade has employed yearly about thirty-five vessels, averaging 390 tons, with crews of eighteen men and boys.

* Merchandise only.

We have not been able to procure any returns upon which any reliance can be placed for the blank years in the above table. The returns for 1844 we have received from the British consul at Canton.—See his detailed statement of the American trade at Canton for that year hereafter: which, with other returns of the British and foreign trade of that port, has been prepared with great pains and all possible accuracy by him.

Formerly large quantities of valuable furs, procured on the north-west coast of America, and of seal-skins, obtained from the numerous islands in the high latitudes of the southern ocean, were carried to China; and furnished no inconsiderable part of the American sales in the China market; but which never appeared in the American custom-house documents, or constituted any part of the official exports of the United States.

The great prices obtained at Canton for furs, particularly sea-otter skins, from the north-west coast of America, carried there by Captain Cook, induced others to engage in this trade. The enterprise of the Americans led them very early to engage in these long and hazardous trading voyages. The first undertaken, from the United States, was in a ship belonging to Boston, under the command of Captain Kendrick; and the discoveries made by this ship, along the north-west coast of this country, were afterwards urged, by the United States, in support of their claims in that quarter. These voyages, at first, afforded large profits, from the number of the skins procured, and which found a ready market at Canton. The quantity of these furs, for many years past, has greatly diminished, and this trade has become of comparatively small importance.

The Americans not only explored the north-west part of this continent for furs, but also visited the numerous islands in the southern ocean, in search of seal-skins, for the Chinese market. These latter voyages being at first also profitable, induced such competition, that the seal soon became scarce at the places usually visited. The Americans, however, with a spirit of enterprise and hardihood only equalled by those who pursue the whale, pushed their way through floating mountains of ice to still higher southern latitudes; and found the *fur-seal*

in islands and regions before unknown. These perilous voyages were principally conducted by the hardy and adventurous fishermen of Stonington, in Connecticut, in vessels of from fifty to eighty tons. In June, 1833, the number of schooners employed in sealing, from Stonington and its vicinity, was twelve, whose aggregate tonnage was only 855 tons; averaging about seventy for each vessel, and manned by 202 men.—*Pitkin's Statistics*.

We have no official documents showing the value of the furs thus procured by the Americans for the Chinese market. An American gentleman, who was for some time consul at Canton, furnished Mr. Pitkin with a statement of the number and value of sea-otter and seal-skins, imported into Canton, in American vessels, from June, 1800, to January, 1803, with the number of American vessels, entering the port of Canton, during the same period, and the value of exports, for each year, from June 11, 1800, to June, 1802.

According to this statement, the number of sea-otter and seal-skins brought to Canton by the Americans, was as follows:—

D A T E S.	S E A O T T E R.		S E A L S K I N S.	
	Number.	Value.	Number.	Value.
From June 11th, 1800, to April 27th, 1801.....	6,450	dollars. 123,050	325,000	dollars. 276,283
From May 15th, 1801, to June, 1802.....	11,187	298,253	420,750	393,395
From June, 1802, to January 9th, 1803.....	13,720	274,000	207,000	137,600
	34,357	695,313	1,018,750	907,278

The number of American vessels, entering the port of Canton, during the first period, was thirty-three; of which seven were from Boston, seven from Philadelphia, and all the otter-skins were brought in the vessels from the former. The number of vessels in the second period was thirty-four—fourteen from Boston, and nine from Philadelphia; and in the third, the number was thirty-three—eleven from the former place, and six from the latter; and in the two last periods, most of the otters were also brought by the Boston vessels.

According to the same statement, the exports to the United States were:—

	dollars.
For the first period	2,522,000
„ „ second period	3,742,194

Averaging those two years about 3,200,000 dollars; and the value of skins imported during the same periods, was about 1,080,000 dollars; equal to about one-sixth of the exports. Mr. Pitkin could obtain no information, as to the value of furs and skins carried to Canton, from 1803 to 1818.

About the year 1819, the American merchants began to carry British woollen and cotton goods, from the ports of Great Britain, directly to China. The value of British goods, imported into Canton by the American merchants, 1824—1825, was 794,514 dollars; and in 1826—1827, was 893,836 dollars.

The merchandise thus exported, from Great Britain, does not appear in the

American custom-house books; and makes no part of the official accounts of American exports to China. This trade has been continued.

RETURN of the Quantities and Value of Merchandise Exported from the Port of Canton, in forty-three American Vessels, of the burden of 19,269 Tons, to the Countries and Places undermentioned, during the Year ending 31st of December, 1844, viz.:—

N.B.—In these returns are not included the quantities of merchandise imported into Canton *via* Macao, in Portuguese Lorchas.

Canton, 31st of December, 1844.

FRANCIS C. MACGREGOR,
Her Majesty's Consul.

CHAPTER XXVII.

TRADE AND NAVIGATION BETWEEN THE UNITED STATES AND THE FOREIGN WEST INDIES, MEXICO, CENTRAL AMERICA, AND THE STATES OF SOUTH AMERICA.

In defiance of the suicidal commercial policy of France, Spain, and Portugal, which prohibited any legal trade or intercourse on the part of foreign subjects or citizens, with their possessions on the continent of America and the West India Islands, the Anglo-Americans persevered and succeeded, during war and peace,

in supplying with provisions and merchandise, the French, Spanish, and Portuguese colonies.

In some instances, France allowed her colonies to receive foreign articles, which could not be supplied by the mother country; and those legal imports into the French colonies, from the United States, amounted in 1786, to 13,263,000 livres, or about (at the then value of French money in the West Indies) 520,000*l.* sterling. Imports by American ships from these colonies, amounted to about 7,263,000 livres. The extent and value of the illicit trade has at all times been uncertain.

At the commencement of the late war, declared by France against Great Britain, in the winter of 1793, France offered to secure to the United States, the trade of her colonies by a *national compact*; accompanied by a new treaty of alliance, under which the French colonies were to be afterwards ceded to France. The American government did not consider it politic to accept the offer.

During the war, however, France was compelled to leave open her colonial ports to all the world; and the Americans had a principal share in the trade with the French West India islands. The value of exports and imports, in each year, from 1795 to 1801, are stated as follows by Mr. Pitkin:—

Years.	Exports.	Imports.	Years.	Exports.	Imports.
	dollars.	dollars.		dollars.	dollars.
1795	4,954,952	15,751,758	1799	2,776,604	2,022,929
1796	8,408,946	15,743,774	1800	5,123,433	9,385,111
1797	8,565,053	14,030,337	1801	7,147,972	13,593,255
1798	5,344,690	15,380,091			

During the years 1804, 1805, 1806, and 1807, the average value of American domestic produce, carried to the French islands, was about 2,800,000 dollars, and of foreign produce, between 3,000,000 dollars and 4,000,000 dollars. The imports from them into the United States, during this period, were to a much larger amount: the greatest part of the imports were afterwards re-exported to France and other parts of Europe. After that period, most of the French West India islands were captured by the British.

On the restoration of peace, in 1814, France resumed her former system of colonial policy; but the value of the commercial intercourse of the United States, with the islands remaining, after the loss of St. Domingo, had been comparatively of little importance.—(See *Tables of the Trade of the United States, &c.*)

HAYTI.—The American trade with the island of Hayti, since it came under the government of the blacks, has been continued: and since 1821, has far exceeded that with the islands still remaining in the possession of France. The principal articles exported to Hayti, are flour, rice, beef, pork, butter, lard, hams, cheese, and fish; and coffee and cocoa are the chief articles received in return.—(See *Tables* hereafter.)

American Trade with Spanish West Indies and American Colonies.—During the long wars in Europe, the Americans were the principal carriers of the rich products of the Spanish islands, and, to a great extent, supplied those islands also with the manufactures of Europe. The values of exports and imports, from 1795 to 1801, were as follows :—

Years.	Exports.	Imports.	Years.	Exports.	Imports.
	dollars.	dollars.		dollars.	dollars.
1795	1,389,219	1,739,138	1799	8,993,401	10,974,295
1796	1,821,347	1,718,026	1800	8,270,400	10,587,566
1797	3,595,519	4,123,362	1801	8,437,659	12,799,878
1798	5,082,127	8,139,167			

The exports of domestic and foreign produce to the Spanish colonies, from 1804 to 1820, were estimated as follows :—

Years.	Domestic Produce.	Foreign Produce.	Years.	Domestic Produce.	Foreign Produce.
	dollars.	dollars.		dollars.	dollars.
1804	1,725,662	1,176,998	1813	2,809,705	183,549
1805	2,806,112	4,884,776	1814	1,971,886	48,408
1806	2,391,172	8,476,061	1815	2,832,828	866,048
1807	2,470,472	9,870,753	1816	2,732,226	3,018,386
1808	631,086	3,545,967	1817	3,606,588	3,477,511
1809	3,352,271	3,333,346	1818	3,531,769	2,380,464
1810	3,182,318	3,604,791	1819	3,519,366	2,980,717
1811	3,606,510	3,973,099	1820	3,439,365	2,545,717
1812	2,640,502	1,331,638			

The trade of the United States with Cuba has been of considerable extent, the exports consist of quantities of flour, also beef, pork, dried fish, and lard. American manufactures, such as household furniture, coaches and carriages of different sorts, saddlery, hats, combs, buttons, gunpowder, glass, leather, boots and shoes, soap, and tallow candles, together with spermaceti, and several minor articles. In return for these, the imports are sugar, nearly one-half of that which is imported into the United States from all parts of the world has been received from that island, and from the same source we have received more than one-third of our coffee. With other parts of the Spanish West-Indies, with Mexico, the Central Republic, Columbia, Buenos Ayres, Chili, and Peru, the American trade has been, and is, of considerable importance; Mexico, the Central Republic, Columbia, Brazil, Buenos Ayres, and Chili, are markets for domestic produce, manufactures of cotton, &c. The exports to Brazil of American domestic produce, consist of, viz.: flour, fish, beef, pork, hams, and butter, candles of spermaceti and tallow, whale oil, household furniture, hats, shoes, and boots, soap, cotton goods, and gunpowder; and also foreign articles, such as cotton and hempen goods, sail duck, cordage, teas, and spices; the American ships bringing back copper and raw hides, sugar, coffee, as well as gold and silver coin.

Subsequent to 1820, a separate account of the commerce with the island of Cuba, has been kept by the United States customs; together with the quantity of sugar, coffee, and molasses, imported in each year, since that period, viz. :—

Years.	Imports.	Exports.	Years.	Imports.	Exports.
	dollars.	dollars.		dollars.	dollars.
1821	6,584,849	4,540,680	1833	9,754,787	5,672,700
1822	7,299,322	4,270,618	1834	9,096,002	5,352,435
1823	6,952,381	5,405,365	1835		
1824	7,899,326	5,807,533	1836		
1825	7,556,412	5,120,702	1837	12,447,922	6,367,603
1826	7,658,759	6,132,432	1838	11,694,812	6,175,758
1827	7,241,849	6,816,088	1839	12,599,843	6,116,831
1828	6,123,135	6,403,991	1840	9,835,477	6,310,515
1829	4,866,524	5,578,889	1841	11,567,027	5,739,082
1830	5,577,230	4,916,735	1842	7,650,429	4,770,449
1831	8,371,797	4,893,842	1843	3,326,797	5,015,933
1832	7,068,857	5,312,151	1844	5,238,595	9,930,421

The following quantities of sugar, coffee, and molasses, have been imported from Cuba into the United States, during the following years.

Years.	Brown Sugar.	White or Clayed Sugar.	Coffee.	Molasses.
	lbs.	lbs.	lbs.	gallons.
1821	29,651,810	6,165,645	9,113,866	4,738,156
1825	31,387,099	6,914,813	19,167,025	6,214,367
1831	39,363,080	10,326,218	38,097,122	10,449,437
1840	48,126,706	12,967,463	25,331,888	15,377,778
1841	90,384,397	15,215,291	17,198,573	15,694,753
1842	67,586,332	15,224,332	14,321,458	13,526,616
1843	31,628,319	1,076,449	16,611,987	98,715,755
1844	114,362,368	4,720,678	18,628,875	194,059,165

The principal articles of domestic produce usually shipped from the United States to Cuba, are flour, fish, beef, pork, hams, lard, butter, rice, lumber, whale oil, and various domestic manufactures, as household furniture, coaches, and other carriages, hats, saddlery, glass, gunpowder, combs, and buttons, leather, boots and shoes, spermaceti and tallow candles, and soap; and of foreign produce, cotton, silk, flax and hempen goods, some wines, teas, spices, &c.

Quantity of flour, beef, pork, dried fish, and lard, exported to Cuba during the following years :—

Years.	Flour.	Beef.	Pork.	Dried Fish.	Lard.
	barrels.	barrels.	barrels.	quintals.	lbs.
1821	156,071	12,364	8,509	41,614	2,398,259
1825	109,698	13,170	1,410	51,280	3,274,107
1830	77,598	9,794	9,706	73,948	4,609,493
1840	69,819	4,029	3,628	69,018	5,539,245
1841	69,337	6,271	4,436	77,219	7,358,111
1842	46,846	6,286	4,146	86,110	5,318,875
1843	29,437	3,203	3,352	46,307	4,400,122
1844	24,875	7,800	6,164	107,493	6,390,873

The value of the following domestic manufactures, exported to Cuba, in the year 1830, was estimated at more than 800,000 dollars, viz.:—in

Household furniture	58,673
Coaches, and other carriages	16,945
Hats	182,216
Saddlery	21,961
Glass	20,688
Gunpowder	62,722
Combs and buttons	33,738
Leather, boots and shoes	157,738
Soap, and tallow candles	217,990
Spermaceti candles	62,413
Total	835,084

The American tonnage, employed in the trade with Cuba, since 1821, has varied from about 100,000 to 130,000 tons in each year (including the repeated voyages), and with the port of Havanna has, in some years, far exceeded that of all other nations.

In 1827, the number of vessels entering and clearing from this port, with their tonnage, was as follows:—

COUNTRIES.	ENTERED.		CLEARED.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
	number.	tons.	number.	tons.
United States	785	125,067	667	103,395

The quantity of sugar and coffee imported into the United States, since 1821, from this island, has been, of the former, nearly one-half, and of the latter, from one-third to one-half of all those articles imported, from all parts of the world during this period.

The following statement exhibits the proportions of imports during the Year ending the 30th of June, 1844.

FROM	Total Imports.	In American Vessels.	In Foreign Vessels.	Total from Spanish Dominions.
Spain on the Atlantic	252,127	214,204	37,833	13,775,451
Spain on the Mediterranean	381,237	322,491	58,746	
Teneriffe	61,653	52,050	9,603	
Manilla	724,811	724,811	
Cuba	9,530,421	9,823,521	106,900	
Other Spanish West Indies.	2,425,202	2,395,183	30,017	

See tables of exports to foreign West Indies and South America, &c., hereafter.

Porto Rico.—In an official document, published at Porto Rico, the general trade, in 1842, was stated as follows:—

From the above-mentioned documents, I find that the total
importations for that year amounted to . . . dollars cts.
5,757,403 84

Of which were imported in Spanish bottoms . . . dollars cts.
3,410,577 57
In American bottoms . . . 1,456,998 05
In French bottoms . . . 151,371 12
In English bottoms . . . 139,502 57
In all other foreign bottoms . . . 598,954 53
5,757,403 84

That the total exportations for the same year amounted to . . . 6,429,257 35
Of which were exported in Spanish bottoms . . . 1,563,109 19
In American bottoms . . . 2,453,299 32
In French bottoms . . . 911,138 31
In English bottoms . . . 554,126 88
In all other foreign bottoms . . . 947,583 65
6,429,257 35

That the number of vessels "arriving" and "departing" are:—

	Arrivals.	Departures.
Spanish vessels	594	509
American vessels	438	399
French vessels	143	137
English vessels	88	91
All other foreign vessels	85	81
	1348	1217

That the commercial revenue is this:—

	dollars	cts.
Amount of duties collected on imports	1,026,266	95
" " " exports	313,201	25
" " " tonnage and anchorage dues	98,882	98
	1,438,351	18

TOTAL Exports to the following Countries, since their Independence as separate Governments.

CHAPTER XXVIII.

TRADE OF THE UNITED STATES WITH FRANCE.

THE trade between France and the United States, in 1787, was, according to M. Peuchet, as follows:—

Exports to the United States, from France and dependencies.

	livres.
Coffee, sugar, rum, syrup, salt, olive oil, fruits, brandy, wine, and liqueurs, amounted to	10,675,000
Cotton, drugs, &c., to	694,000
Stuffs, laces, silk, hosiery, linen, cambric, soap, gloves, gunpowder, glassware, and hardware, to	1,238,000
	12,607,000
Or about 2,500,000 dollars.	
	livres.
Grain, fish, and bread stuffs, amounted to	4,483,000
Boards, timber, staves, live stock, fish oil, peltry, pitch and tar, potash, linseed, and tobacco, to	19,283,000
Manufactures, introduced into the colonies, to	547,000
Negroes	226,000
	24,539,000

Or about 5,000,000 dollars.

For about three years preceding the French Revolution, the average value of imports from the United States into France alone, was estimated at 9,600,000 livres, or about 1,520,000 dollars; and the exports from France to the United States, at 1,800,000 livres, or about 380,000 dollars.*

In 1792, according to the statement of the secretary of state, the exports to France and dependencies amounted to 4,698,735 dollars, and the imports to 2,068,348 dollars.

The articles of domestic produce usually shipped to France, are cotton, tobacco, hops, some fish, pot and pearl ashes, whale oil and whalebone; and those of foreign produce, principally sugar and coffee, with some teas, cocoa, pepper, and other spices. The principal imports are wines, brandy, silks, olive oil, and jewellery of all kinds; and, latterly, cotton goods.

STATEMENT of the Value of Exports and Imports, from 1795 to 1801.

Years.	Exports.	Imports.	Years.	Exports.	Imports.
	dollars.	dollars.		dollars.	dollars.
1795	7,698,683	3,671,331	1799	...	901,018
1796	3,171,759	1,835,066	1800	40,400	74,228
1797	3,825,231	3,045,796	1801	3,985,292	1,013,690
1798	1,476,588	1,371,727			

* The small amount of this commercial intercourse, particularly in exports, disappointed the expectations of the French nation, and Monsieur Arnould, referring to this balance against France, says—"Voilà donc pour France le *ne plus ultra* d'un commerce, dont l'espoir a pu contribuer, à faire sacrifier quelques centaines de millions, et plusieurs générations d'hommes."

VALUE of Domestic and Foreign Produce, Exported to France from 1804 to 1820.

Years.	Domestic Produce.	Foreign Produce.	Years.	Domestic Produce.	Foreign Produce.
	dollars.	dollars.		dollars.	dollars.
1804	3,219,112	5,604,942	1813	1,780,291	2,296,453

TRADE BETWEEN THE UNITED STATES AND THE CONTINENTAL PORTS OF EUROPE
(EXCLUSIVE OF FRANCE).

The trade carried on by American ships and citizens with the ports of continental Europe, exclusive of France, has been of important extent. To HAM-BURGH and BREMEN, the value of exports of the United States, consisting chiefly of tobacco, cotton, wool, rice, rum, whale oil, skins, furs, pot and pearl ashes, coffee, sugar, teas, cocoa, pepper, and other spices, will be found in the foregoing and following tables of the general trade of the United States.

To HOLLAND, the exports are nearly of a similar kind, and from the Hanse Towns, and from Holland, manufactures are imported into the United States, or carried by American ships to the foreign markets.

The trade from the United States to the ports of the Mediterranean, consists chiefly in the exports of cotton, sugar, fish, whale oil, &c., to Trieste and the Italian ports; and carrying away wines and some manufactured goods. Some trade is also carried on by the United States' ships with Turkey, the coasts of Africa, and Asia within the Mediterranean.

To RUSSIA, the exports from the United States have been unimportant, consisting chiefly of some cotton, tobacco, rice, and oak-bark, of our domestic produce, and coffee, sugar, spices, and dye-woods, being the articles of foreign produce mainly exported. The imports from Russia have been of great amount and value (see *Tables*), principally of iron, hemp, cordage, duck, various species of cloth wrought from hemp and flax, such as shirtings, tickings, both broad and narrow, drillings, and diapers. With SWEDEN, the trade of the United States has been inconsiderable; iron formerly constituting the principal import to this country, for which were returned tobacco, rice, whale oil, and other articles of domestic as well as foreign produce. DENMARK also ranks low in the amount of its commercial intercourse with the United States.

The trade between the United States and SPAIN has been greatly restricted by the pernicious prohibitory and high customs duties of the latter. Cotton and some articles are exported in return for wines, &c., from the United States.

To PORTUGAL and MADEIRA, the United States have exported some wheat, maize, flour, fish and fish oil, staves, &c., in return for wines, salt, fruit, &c.—For details, see the *Tables of Trade generally*.

CLASSIFIED Summary of the Value of Merchandise Imported into the United States, from the following European Countries, during the Year ending the 30th of June, 1844.

Of the 624 bottoms employed in carrying the foregoing produce of the United States, 414 were American, 147 Hanseatic, twenty-seven French, twenty-two Swedish and Norwegian, eight English, five Hanoverian, four Belgian, four Dutch, two Prussian, and one Danish.

The sales of tobacco at the five ports on the North Sea, amounted, in 1843, to 68,970 hogsheads; less by 13,015 hogsheds, than in 1842. Prices in 1842 ruled so low, compared with former years, that the trade overstocked itself.

These prices, at many points, are affected by the depreciated nature of the currency; at Mobile, for instance, the currency is depreciated forty per cent, and prices rule nearly as much higher than at New Orleans, as the difference in the depreciation of the local currencies. Many articles, however (that of flour in particular, which is from three dollars fifty cents at one point, to nine dollars at another), display a much greater disparity in price than the cost of transportation added to the difference in the currencies.

STATEMENT of the Prices of Flour and Wheat at Cincinnati, from 1841 to 1845.

" 1843	3 28	" 4 28	65 " 80						

" In the year 1841, the crop of wheat was simply a good one. The average price of flour during the month of July, was four dollars six cents and a quarter per barrel—the average price of wheat, seventy-two cents and a half per bushel. The price of one bushel of wheat, therefore, entered five and three-fifth times into the price of one barrel of flour. By the close of August, flour had advanced to four dollars sixty-two cents per barrel. Wheat remained at seventy-five cents per bushel.

" In 1842, the crop was large. The average price of flour in July, was three dollars forty-nine cents and three-quarters per barrel—the average price of wheat, forty-nine cents and a half per bushel. The price of a bushel of wheat entered seven and one-tenth times into the price of a barrel of flour. By the close of August, flour had receded to two dollars sixty-two cents and a half, and wheat to forty cents to forty-five cents.

" In 1843, the yield proved to be full an average one, and with it there was much of the previous year's crop held over. The average price of flour in July was three dollars seventy-three cents; that of wheat, seventy cents. The price of a bushel of wheat entered five and one-third times into the price of a barrel of flour. The latter part of August, flour stood at three dollars sixty cents to three dollars seventy-three cents; while wheat had fallen to sixty-five cents.

" In 1844, there was a fair crop. For the month of July, flour averaged three dollars twenty-nine cents per barrel, and wheat fifty-nine cents per bushel. The price of a bushel of wheat entered five and three-fifth times into the price of a barrel of flour. By the close of August, flour had advanced to three dollars sixty-five cents to three dollars seventy-six cents per barrel, and wheat to seventy cents per bushel.

" This year, 1845, Ohio had the best yield of wheat that has been given her since 1839.

CHAPTER XXX.

MISCELLANEOUS STATEMENTS RELATIVE TO MINERALS, CANALS, RAILROADS,
TRADE, SEA-PORTS, PORT AND OTHER CHARGES.*

Copper Region of Lake Superior.—It would appear, if the various accounts we have read have any truth, that the country south of Lake Superior is abundantly rich in copper. One writer states—"The scientific reader is familiar with the history of the famous Copper Rock of Lake Superior. It is a vast mass of solid copper, weighing not less than 6000 lbs., and was discovered, many years since, lying in the bed of the Ontonagon river, entirely isolated. It has rested, probably, for ages some twenty miles from the lake. For the purpose of transporting the mass to navigable water, a huge car, placed upon a moveable railroad, was built, and, by patient labour, it was gradually advanced, until it reached deep water, where it was placed on a flat, and easily floated down to the lake shore. It was intended to ship it to New Orleans. Had they succeeded, it would have been a fortune for them, as a mere curiosity. But government interfered! Although they had purchased the rock from the Indians in whose territory it was found, the government agent claimed its possession—denying the power of the Indians to dispose of it. As this claim was not set up until the great labour of transporting it to the shore of the lake was effected, the agent offered to fully compensate the enterprising gentlemen by whom it had been removed, for their trouble. This was hard, but there was no alternative. They had to submit quietly, and see the fruit of their labours borne off by the government agent to the Sault, from whence it has been shipped on board of a revenue cutter. It will be immediately forwarded to Washington, and placed in the National Institute, where it will remain for all coming time, we hope, as one of the greatest curiosities of the age. The Indians have revealed to Mr. Ashman where another rock (but not of equal weight) may be found. It had been discovered ages before, and hid—its location being kept a profound secret, until civilisation had dissipated the superstition connected with it."

The following letter from a gentleman at Detroit furnishes more detailed particulars of this mineral curiosity:—

"It is upwards of twenty-three years since I first visited this remarkable specimen of native copper in the forests of Lake Superior. It has been somewhat diminished in size and weight, in the mean time, by visitors and travellers in that remote quarter; but retains, very well, its original character and general features. I have just returned from a re-examination of it in a store, in one of the main streets of this city, where it has been deposited by the present proprietor, who designs to exhibit it to the curious. Its greatest length is four feet six inches; its greatest width about four feet, its maximum thickness eighteen inches. These are rough measurements with the rule. It is almost entirely composed of malleable copper, and bears striking marks of the visits formerly paid to it, in the evidence of portions which have from time to time been cut off. There are no scales in the city large enough, or other means of ascertaining its precise weight, and of thus terminating the uncertainty arising from the several estimates heretofore made. It has been generally estimated here, since its arrival, to weigh between 6000 lbs. and 7000 lbs., or about three tons and a half, and is by far the largest known and described specimen of native copper on the globe. It is clearly a boulder, and bears marks of attrition from the action of the water, on some parts of its rocky surface as well as the metallic portions. The adhering rock, of which there is less now than in 1820, is apparently serpentine, in some parts stentitic, whereas the copper ores of Keweenaw point, on that lake, are found exclusively in the amygdaloids and greenstones of the trap formation. A circular depression of opaque crystalline quartz, in the form of a semi-geode, exists in one face of it; other parts of the mass disclose the same mineral. Probably 300 lbs. of the metal have been hacked off or detached by steel chisels since it has been known to the whites, most of this within late years."

A gentleman, who recently (1845) visited Kee-nee-naw Point, the famous location of the Lake Superior Copper Mining Company, in a letter to the editors of the *New York Commercial*, dated at St. Marie, says:—

* The following miscellaneous statements we have procured from the United States since the respective heads, to which they belong, were printed. We introduce them here to complete the commercial statistics of the United States.

"This location is situated to the west of Fort Wilkins about eighteen or twenty miles, through which runs, north and south, the Eagle river. This company have now in operation three shafts. The first is seventy-four feet deep, and the vein twenty-three feet wide. The second is thirty-five feet deep, and the vein twenty-two feet wide. The third is thirty-one feet deep, and the vein six feet wide; and each of these three veins exceeds two miles and a half in length. The veins are all within half a mile of each other, and produce silver and copper, averaging from sixty to seventy per cent. They have now on hand, thrown up from the shafts, some 400 tons, which will be ready for shipment to the Boston market by the 1st of September next. Colonel Gratiot has under him nearly 125 men, who are now busily engaged in erecting pounders and crushers, under which passes the trap rock, in which the ore is found. The ore, after this process, is taken and washed in large wire sieves, which separates the rock from the metal. It is then dried, and put into kegs weighing from 300 lbs. to 500 lbs., and ready for market."

The *Wisconsin Democrat* adds, that,

"If report be true, copper rocks will ere long cease to be a curiosity. Mr. De Garmo Jones, of Detroit, who passed through this place on his way to Mineral point and Platteville, informed us that another mass of copper, much larger and purer than that obtained from the Ontonagon, had recently been discovered. In regard to the prospects of those who are prosecuting their researches after copper ore on the south shore of Lake Superior, Colonel Jones informs us that they are pretty fair."

"*Mineral Resources of Alabama.*—The mineral resources in Alabama are of great variety and abundance, but as yet undeveloped. From the report of the committee on agriculture, at the late session of the legislature, we learn that there are five principal, and several other minor mines of gold and silver in Randolph county, producing about 125,000 dollars annually, and affording employment to 300 or 500 persons. In the same county, are inexhaustible beds of iron ore, which does not lose twenty-five per cent in smelting. Tallapoosa, too, is rich in gold and silver mines, and they afford employment to several hundred hands. Goldville is supported by one mine. Gold, too, has been found in Coosa, Talladega, and Chambers. There are iron-foundries in Benton and Talladega. No doubt, were this rich mineral region examined by a scientific person, many valuable discoveries might be made. In Blount, nitre is found in abundance. This side of Tuscaloosa, coal is found in immense quantities, and in many other places. In Clarke, salt can be manufactured at or near Jackson. Iron ore, marble, granite, limestone, &c., are also found in this county. Lead ore, in large quantities, and of excellent quality, is found in the bed of the Tennessee, on the Muscle Shoals; and all these, and others, exist in many other sections of the state." —*Hunt's Merchants' Magazine.*

"*Arkansas Coal.*—The Arkansas Coal company are doing a profitable business in anthracite coal. They anticipate the shipment this year (1844) of 150,000 dollars' worth of coal to the numerous cities and towns on the Mississippi. The coal from the Spadra mines is of the anthracite species, burns freely, with no unpleasant smell, and makes but little dust or ashes. "The mining company," says the *Arkansas Gazette*, "have entered into the matter with great spirit, and we predict that the day is not far distant when all the cities, towns, and villages, on the banks of the 'great father of waters' will receive their supplies of coal from the state of Arkansas."

"*Kennel Coal.*—The *Pittsburg American* states that Messrs. Reynolds and Shunk, who are building a furnace on Red Bank creek, near the Alleghany river, have discovered, in the immediate vicinity of their works, one of the largest bodies of this kind of coal that is known in our country. A friend describes it as lying in a solid body, and opening on the breast of the hill, fourteen feet in depth. This description of coal, from being free from sulphur, which is never the case with bituminous or anthracite, will, we have no doubt, be capable of being converted to great and important uses in the manufacturing of iron. The discovery of a mineral of this description is of very great value. It has heretofore been found in small veins, but this is the first discovery that has been made of so large and valuable a body."

LAKE TRADE, &c.—*Cost of Transportation on Canals, Railroads, &c.*—Statement made by Mr. Charles Ellet, jun., chief engineer on the James river and Kanawha canal and railroad:—Cost of freight on canals exclusive of tolls, one and a half cent per ton per mile; railroads, two and a half cents; McAdam roads, ten to fifteen cents; common turnpikes, fifteen to twenty cents; steamboats on the lakes, two to four cents per ton per mile; steamboats on the Ohio and Mississippi rivers, half to one and a half cent; future average, three-quarters cent per ton per mile.

Down Freight from the Upper Lakes are charged as follows :—

ARTICLES.		ARTICLES.	
Flour	barrel	Ashes	100 lbs.
Provisions	do.	Hides	each
Wheat	bushel	Lead	ton
	cents.		dls. cts.
	40		0 20
	62½		0 15
	15 to 22		3 75

The charges upon wheat are subject to variations. In the early part of last season, wheat in sacks was brought from the upper lakes to Buffalo, for twelve cents and a half per bushel; but in the autumn, when the demand was good, and when a full supply was in store at the west, double that price was paid.

TARIFF of Freights on the Erie Canal.

One-half the quantity of flour which arrived at tide-water, came from other states; and a large quantity of wheat also came, which was ground in the flouring-mills of New York. Of 2,222,204 barrels of flour which arrived at the Hudson, 1,484,900 barrels were of western produce.

**VEGETABLE Food (chiefly Wheat, Flour, Indian Corn, &c.), Imported into New York ;
Total moving on all the Canals, and arrived at Tide-water.**

"The internal trade of the state has greatly increased in the last two years—that is to say, the quantity of vegetable food moving on all the canals increased, in 1842, but 12,000 tons; while the quantity coming from other states increased 13,000 tons, and the surplus delivered at tide-water increased 29,000 tons—showing that New York furnished 16,000 tons of the increase of vegetable food delivered at tide-water. In 1843, however, the reverse took place; and the movement on all the canals was raised 44,000 tons over the previous year, while the deliveries at tide-water rose but 37,000 tons. In 1844, an increase of 46,000 tons in the whole movement, and of 35,000 tons only, in the deliveries; showing that the internal receipts and deliveries increased thirty per cent more than the external trade. How far this effect has been produced by the carrying of freights upon the railroads, cannot, perhaps, easily be determined. It is, no doubt, true, that considerable quantities were taken off the canals by the railroads, and they would swell the sum of the internal trade without appearing in the deliveries at tide-water. The changing current of the trade is also apparent in the significant fact that the tonnage at Buffalo actually decreased, while that at Oswego increased seventy per cent, and at Whitehall fifty per cent. In those figures, we have doubtless the influence of the *Welland canal* upon the course of the western trade. Western vessels, coming through the Welland canal, deliver their freights at Oswego, 120 miles in the rear of Buffalo; by which means, that distance of canal tolls is saved. The sagacity of New England capitalists has already detected the route by which the western produce may reach Boston without incurring the tolls levied by the New York canals. The Boston and Burlington railroad, and the Champlain and Ogdensburg railroads, are in active progress. By this means, the flank of New York will be completely turned. Vessels laden with the produce of the western lakes may avoid New York canals, by passing the Welland without breaking bulk, and delivering their freight at Ogdensburg; whence, accumulating the products of northern New York, it may pass, without tolls, over a favourably constructed railroad, to Boston, whose large and grown capital has already, by its facilities, attracted a large portion of the trade, over the Western railroad."

**COMPARATIVE View of the Value of Real and Personal Property in Boston and
New York.**

YEARS.	B O S T O N .			N E W Y O R K .		
	Real Estate.	Personal Estate.	TOTAL.	Real Estate.	Personal Estate.	TOTAL.
	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.
1841.....	62,063,000	36,043,000	98,106,000	186,350,948	64,843,072	251,194,020
1842.....	65,509,300	41,223,800	106,733,300	176,489,042	61,294,550	237,783,601
1844.....	72,048,000	46,402,300	118,450,300	171,930,591	64,023,456	235,950,047
Increase	9,985,000	10,359,700	20,343,700			
Decrease	14,414,357	820,510	15,234,873

"This is a remarkable change in the face of affairs. Boston, since the completion of its railroad, has advanced more than New York has diminished. In 1825, the Erie canal was finished, and its effects in New York were as follows:—

REAL and Personal Estate, New York City.

Y E A R S .	Population.	Value.	Y E A R S .	Population.	Value.
	number.	dollars.		number.	dollars.
1816.....	95,519	82,074,200	1835.....	270,089	218,723,703
1825.....	166,080	101,150,040	1844.....	350,000	235,900,047

"In the ten years prior to the construction of the canal, the valuation increased twenty-five per cent.—in the ten years succeeding its completion, it increased 117 per cent; in the last ten years, it has increased but eight per cent. This is a very marked result. Boston has increased, in the last four years, twenty per cent; at which rate her increase, for the ten years succeeding the completion of her railroads, is as great as that of New York in the decade commenced by the completion of the Erie canal. These are the marvellous results of rival public works upon the currents of trade and the value of property, at the great centres of business. The political divisions of a country have very little to do with its real interest, when it is divided into artificial or real routes for commerce. New York has expended large sums for the construction of canals; and has, in consequence, imposed a tax upon the northern counties of New York, which are in nowise benefitted by them; but will now, by the expenditure of New England capital, have all their material interests connected with Boston."—*Official Reports and Tables, Hunt's Merchants' Magazine.*

WELLAND CANAL TOLLS.—LEGAL RATES.

The first column of figures represents the amount to be paid for passing through the whole line; the second for passing between St. Catharine's and Port Dalhousie. In calculating the amount to be charged for passing between Port Maitland (the entrance from Lake Erie), and St. Catharine's, the collector deducts the amount of the last column from the first, except in the case of vessels which are charged as for the whole line. There is a reduction from the old rates of toll on nearly every article, amounting to seventy-five per cent in one or two instances; and on the principal articles of traffic, the reduction is twenty and twenty-five per cent.

PORT CHARGES, &c.

The following are additional particulars, not contained under the trade of each port, which see—

PHILADELPHIA Charges for American Vessels, or for those of States having Reciprocity Treaties.

ENTRY OF VESSELS, &c.	Port-charges.	ENTRY OF VESSELS, &c.	Port-charges.
	dols.		dols.
Entry of a vessel of 100 tons and upwards.....	7 50	Crew-list and bond.....	0 00
Ditto of a vessel under 100 tons.....	1 50	Passport and bond.....	0 00
Register and bond.....	7 50	Bill of health.....	0 20
Indorsement.....	1 00	Indorsement.....	1 00
Clearance of a vessel of 100 tons and upwards.....	7 50	Sea-letter.....	0 80
Ditto of a vessel under 100 tons.....	1 50		

Vouchers are given in all cases.

NEW ORLEANS.—Customs' fees for entrance and clearance of vessels are from five to ten dollars.

Harbour-master's fees, three cents per ton, American measurement.

Port-wardens' fees, five dollars for each vessel.—Vouchers always given.

NEW YORK.

Light Money.—Not charged to any vessels.

Entry Fee.—Every vessel, under any flag, pays this charge, being three dollars, if under 100 tons; and five dollars fifty cents, if of 100 tons or over.

Moussament.—Every foreign vessel upon entering a port in the United States for the first time pays this charge, which is, if under 100 tons, one dollar; over 100 tons, but less than 200 tons, one dollar fifty cents; if 200 tons or over, two dollars.

Telegraph.—Paid only by vessels which use it by contract, having private signals.

Permits.—These, being for passengers' luggage, are charged to the vessel, twenty cents for every five passengers.

United States' Hospital Money.—This is a charge made exclusively to American vessels, being twenty cents per month for master, officers, and crew, each, for the time absent from the United States.

The above are the fees paid upon the entering of a vessel, and for which a voucher is given by the cashier of the customs.

Upon clearing for a foreign port, the only charge to a foreign vessel is, if under 100 tons, one dollar fifty cents; if 100 tons or over two dollars fifty cents. The same charge to American vessels, with these additional: crew-list, sixty-five cents; articles certified, twenty cents; bill of health, when required, twenty cents; and certified manifest, when required, twenty cents. No voucher is given for these charges.—See all other particulars under the head of New York.

RATES of Pilotage for Tybee Bar and River Savannah; as revised by a Law of the State of Georgia, passed December, 1836, adding Twenty per cent to the former Rates.

RETURN of the British Trade at the Port of New York during the Year ending the 31st of December, 1844.

Of the 325 British vessels arrived, there were from Great Britain, with coals and salt 1, value of cargo 4100 dollars; marble 1, value of cargo 1724 dollars; coals and iron, 1, value of cargo 6380 dollars; iron 15, value of cargo 318,921 dollars; dry goods 3, value of cargo 95,000 dollars; soda 1, value of cargo 3500 dollars; coals 9, value of cargo 62,850 dollars; chalk 2, value of cargo 9000 dollars; bagging 1, value of cargo 48,000 dollars; general cargo 15, value of cargo 855,914 dollars; salt 15, value of cargo 116,303 dollars; oil, &c. 2, value of cargo 50,000 dollars; slate 1, value of cargo 2766 dollars; sugar 1, value of cargo 21,774 dollars; in ballast 13.

From Nova Scotia, viz.: Yarmouth, with wood 5, value of cargo 300 dollars; in ballast 1. Sydney, with coals 11, value of cargo 5699 dollars. Cumberland, with potatoes 1, value of cargo 600 dollars; grindstones 6, value of cargo 6840 dollars. Kempt, plaister 1, value of cargo 300 dollars. Parsboro', plaister 3, value of cargo 450 dollars. Walton, plaister 1, value of cargo 90 dollars. Halifax, fish 4, value of cargo 18,250 dollars; potatoes 2, value of cargo 926 dollars; coals 1, value of cargo 100 dollars; skins 1, value of cargo 4162 dollars; in ballast 1. Cornwallis, with potatoes 5, value of cargo 5730 dollars. Douglas, with plaister 2, value of cargo 210 dollars. Shelburne, granite 1, value of cargo 338 dollars. Truro, with plaister 1, value of cargo 300 dollars. Guysboro', with plaister 1, value of cargo 500 dollars. Pictou, with coals 4, value of cargo 1698 dollars; with plaister 1, value of cargo 140 dollars; with grindstones 2, value of cargo 1800 dollars. Windsor, plaister 62, value of cargo 7715 dollars; potatoes 1, value of cargo 568 dollars; in ballast 1. Digby, with fish 1, value of cargo 1200 dollars; potatoes 1, value of cargo 400 dollars. Maitland, with plaister 1, value of cargo 80 dollars.

From Sidney (Cape Breton), with coals 2, value of cargo 901 dollars. New Brunswick, with plaister 2, value of cargo 480 dollars; with potatoes 3, value of cargo 3100 dollars. Nassau, New Providence, with fruit 1, value of cargo 2000 dollars; with wood 1, value of cargo 500 dollars. Connecticut, with iron 1, value of cargo 420 dollars; plaister 1, value of cargo 100 dollars; in ballast 5. Rhode Island, in ballast 1. Boston, in ballast 1. Pernambuco, in ballast 2. Bahia, in ballast 2. Harbour (Brit.), in ballast 1. Honduras, with mahogany 4, value of cargo 11,340 dollars. Demerara, 1, value of cargo 250 dollars; in ballast 1. Newfoundland, with fish 1, value of cargo 680 dollars; salt 1, value of cargo 140 dollars; junk 1, value of cargo 750 dollars; skins 3, value of cargo 8338 dollars; in ballast 8. Bahamas, with salt 26, value of cargo 20,565 dollars; fruit 2, value of cargo 3850 dollars; turtle 3, value of cargo 3850 dollars; pine-apples 1, value of cargo 1500 dollars; dyewood 1, value of cargo 500 dollars; in ballast 1. Bermuda, with arrowroot 1, value of cargo 1000 dollars; salt 1, value of cargo 200 dollars; hides 2, value of cargo 2000 dollars; in ballast 9. St. Vincent, with arrowroot 1, value of cargo 200 dollars; copper 1, value of cargo 1000 dollars; in ballast 3. Nevis, in ballast 1. Antigua, with oil, &c. 1, value of cargo 4000 dollars. St. Kitt's, in ballast 1. Jamaica, with logwood 5, value of cargo 12,000 dollars; pimento 4, value of cargo 39,200 dollars; in ballast 2. Barbadoes, in ballast 4. Trinidad, with hides 1, value of cargo 2500 dollars; in ballast 1. Prince Edward Island, with potatoes 3, value of cargo 2914 dollars. Sierra Leone, with oil 1, value of cargo 887 dollars; hides 2, value of cargo, 7000 dollars; cane-wood 1, value of cargo 2785 dollars.

Total number of vessels 325.

Total value of cargoes 1,789,578 dollars.

Of the 333 British vessels departed, there were for Great Britain, with naval stores 2, value of cargo 70,000 dollars; cotton 14, value of cargo 404,918 dollars; cotton seed 1, value of cargo 70,860 dollars; annotta 2, value of cargo 104,933 dollars; logwood 2, value of cargo 7810 dollars; provisions 3, value of cargo 60,280 dollars; ashes 2, value of cargo 47,020; turpentine 4, value of cargo 40,585 dollars;

* One of these vessels has no value given.

copper ore 1, value of cargo 18,911 dollars; tar 1, value of cargo 17,800 dollars; cedar 1, value of cargo 9400 dollars; flour 1, value of cargo 2300 dollars; general cargo 5, value of cargo 163,500 dollars; provisions one, value of cargo 18,000 dollars; beef 1, value of cargo 17,900 dollars; wheat 1, value of cargo 7000 dollars; hides 1, value of cargo 40,000 dollars.

For Nova Scotia, viz., Truro, with flour 1, value of cargo 5716 dollars. Liverpool, with provisions 1, value of cargo 1900 dollars. Dalhousie, in ballast 2. Cumberland, with provisions 2, value of cargo 500 dollars; flour 1, value of cargo 1000 dollars. Yarmouth, with flour 2, value of cargo 4150 dollars; provisions 5, value of cargo 13,350 dollars. Halifax, with flour 3, value of cargo 10,215 dollars; provisions 12, value of cargo 62,598 dollars; flour and tobacco 1, value of cargo 9000 dollars; tobacco 3, value of cargo 17,300 dollars; hemp 1, value of cargo 2500 dollars; flour and rum 1, value of cargo 2000 dollars; in ballast 2. Windsor, flour 6, value of cargo 767 dollars; provisions 12, value of cargo 1944 dollars; flour and rye 1, value of cargo 95 dollars; corn 1, value of cargo 32 dollars; in ballast 17. Sackville, in ballast 1. Parsboro', with provisions 1, value of cargo 50 dollars; in ballast 2. Digby, with flour 1, value of cargo 400 dollars. Horton, in ballast 1. Pictou, with tobacco 1, value of cargo 1600 dollars; fruit 1, value of cargo 30 dollars; in ballast 4. Sydney, in ballast 1. Guysboro', with provisions 1, value of cargo 10,240 dollars.

For Newfoundland, with provisions 1, value of cargo 4314 dollars. With flour 6, value of cargo 32,007 dollars; provisions 54, value of cargo 364,649 dollars; flour and pork 1, value of cargo 7000 dollars; tea, &c. 1, value of cargo 1572 dollars; butter 1, value of cargo 4500 dollars; pork 1, value of cargo 6000 dollars; molasses 2, value of cargo 12,100 dollars; general 1, value of cargo 7000 dollars; rum, tea, &c. 1, value of cargo 3200 dollars; in ballast 1. Placentia, Newfoundland, with pork 1, value of cargo 3566 dollars. St. Peter's with glassware 1, value of cargo 18,043 dollars. Fogo, Newfoundland, with flour, 1, value of cargo 9900 dollars. New Brunswick, in transit 1. St. John's, New Brunswick, with flour 4, value of cargo 15,853 dollars; provisions 13, value of cargo 54,492 dollars; tobacco value of cargo 24,000 dollars; clover-seed 1, value of cargo 4500 dollars; general 1, value of cargo 150 dollars; flour and hemp 1, value of cargo 3000 dollars; staves 1, value of cargo 2000 dollars; in ballast 9; in transit 2. St. Andrew's, with wheat 1, value of cargo 3000 dollars; in ballast 1. Miramichi, New Brunswick, provisions 4, value of cargo 25,093 dollars. Calais, New Brunswick, in ballast 2. For Canada, in ballast 2. Quebec, general 1, value of cargo 16,450 dollars; naval stores 1, value of cargo 4400 dollars; in ballast 18; with resin 1, value of cargo 7540 dollars; provisions 2, value of cargo 27,000 dollars. Montreal, with lead 1, value of cargo 9270 dollars; tar 1, value of cargo 10,500 dollars. Africa, in ballast 3. Sierra Leone, assorted cargo 1, value of cargo 8941 dollars; tobacco 1, value of cargo 2855 dollars. Gambia, with tobacco 1, value of cargo 11,000 dollars. Pernambuco, with provisions 1, value of cargo 5450 dollars. Demerara, with provisions 3, value of cargo 21,430 dollars. Honduras, with provisions, 3, value of cargo 29,000 dollars. Green Turtle Key, with provisions 1, value of cargo 900 dollars; lumber 1, value of cargo 2200 dollars. Ecathera, with flour 1, value of cargo, 350 dollars. Harbour Island, with flour and hemp 1, value of cargo 1900 dollars. Albaco, with provisions 1, value of cargo 1700 dollars. Bermuda, with provisions 7, value of cargo 45,058 dollars; flour 3, value of cargo 14,100 dollars. Antigua, with provisions 1, value of cargo 4331 dollars. St. Vincent, with provisions 3, value of cargo 19,798 dollars. St. Kitt's, with flour and meal 1, value of cargo 8000 dollars. Jamaica, with provisions 3, value of cargo 15,130 dollars; assorted cargo 1, value of cargo 6367 dollars. Montego Bay, with provisions 2, value of cargo 8570 dollars. Barbadoes, with provisions 2, value of cargo 11,396 dollars; flour 1, value of cargo 7300 dollars. Norfolk, in ballast 1. Menadie, with wheat 1, value of cargo 350 dollars. Eastport, in ballast 1. St. Stephen's, South Carolina, in ballast 1. Sisal, Mexico, in ballast 1. Wilmington, in ballast 1. Nassau, New Providence, with provisions 2,

• One of these vessels has no value given.

value of cargo 4240 dollars; with flour 2, value of cargo 4800 dollars. Harbour Grace, with apples 1, value of cargo 2500 dollars; provisions 3, value of cargo 24,158 dollars.

Total number of vessels 333.

Total value of cargoes 2,189,529 dollars.

PORT OF CHARLESTON.—Of the 92 British vessels which arrived during the year 1844, there were from Great Britain, with coals and iron 1, value of cargo 820*l.* 5*s.*; iron 4, value of cargo 9265*l.*; salt and potatoes 3, value of cargo 920*l.* 10*s.*; salt and coals 4, value of cargo 1100*l.*; salt, hardware, and earthenware 7, value of cargo 13,379*l.*; coals 2, value of cargo 285*l.* 10*s.*; salt, coals, dry goods, and hardware 2, value of cargo 12,280*l.*; salt 12, value of cargo 2640*l.* 6*s.* 6*d.*; with glass, spirit, and ale 1, value of cargo 396*l.*; salt, potatoes, and ale 1, value of cargo 130*l.*; coals, linen, salt, and potatoes 1, value of cargo 380*l.*; coals and potatoes 2, value of cargo 152*l.* 10*s.*; hay, potatoes, and salt 2, value of cargo 318*l.*; dry goods 1, value of cargo 5330*l.*; in ballast 16.

From Nassau, with turtle 1, value of cargo 20*l.*; in ballast 8. Savannah, with cotton 1 (in distress). Demerara, in ballast 2. Rio de Janeiro, in ballast 1. Barbadoes, in ballast 2. Jamaica, in ballast 5. St. Thomas, in ballast 1. Bermuda, in ballast 4. Harbour Island, with salt and fruit 1, value of cargo 40*l.* Oran, in ballast 1. Gibraltar, in ballast 4. Cape de Verd Islands, in ballast 2. Total number of vessels 92. Total value of cargoes 47,457*l.* 1*s.* 6*d.*

Of the 99 British vessels which departed, there were for Great Britain, with cotton and turpentine 3, value of cargo 43,029*l.* 6*s.*; cotton and chain cables 1, value of cargo 13,261*l.* 17*s.*; rice, cotton, and paddy 1, value of cargo 16,002*l.*; cotton, rice, and amaranth 1, value of cargo 12,604*l.* 12*s.* 3*d.*; paddy, cotton, and plank 1, value of cargo 4031*l.* 9*s.*; rice and cotton 5, value of cargo 49,920*l.* 17*s.* 3*d.*; cotton, rice, and corn 1, value of cargo 5038*l.* 2*s.* 8*d.*; cotton 39,* value of cargo 396,681*l.* 5*s.* 11*d.*; cotton and rice 5, value of cargo 43,190*l.* 1*s.* 2*d.*; cotton, rice, corn, and machinery 1, value of cargo 10,345*l.* 3*s.*; cotton and naval stores 1, value of cargo 11,111*l.* 7*s.* 6*d.*; cotton and rice 1, value of cargo 557*l.* 11*s.* 8*d.*; cotton, tar, and planks 1, value of cargo 15,455*l.* 6*s.* 3*d.*; cotton, copper-ore, and pitch 1, value of cargo 17,910*l.* 12*s.* 6*d.*; paddy, cotton, and ambergris 1, value of cargo 5189*l.* 11*s.* 2*d.*; cotton and cane-reeds 3, value of cargo 28,173*l.* 16*s.* 7*d.*; cotton and planks 3, value of cargo 30,720*l.* 13*s.* 8*d.*; paddy, cotton, and cane-reed 1, value of cargo 9320*l.* 1*s.* 1*d.*

For Rotterdam, with rice 1, value of cargo 1981*l.* 8*s.* 8*d.* Ichaboe, in ballast 1. British West Indies, with rice 6, value of cargo 4646*l.* 5*s.*; rice and tar 1, value of cargo 568*l.* 2*s.* 6*d.*; rice and peas 1, value of cargo 1012*l.* 10*s.*; rice, provisions, and lumber 1, value of cargo 1261*l.* Nassau, with rice and corn 1, value of cargo 253*l.* 16*s.*; flour and corn 1, value of cargo 145*l.* 18*s.* 3*d.*; rice, corn, and flour 1, value of cargo 140*l.*; rice and provisions 1, value of cargo 1162*l.* 3*s.* 2*d.*; lumber, provisions, and live stock 1, value of cargo 268*l.* 8*s.* 6*d.*; rice, lumber, and corn 1, value of cargo 585*l.*; cotton 1, value of cargo 821*l.* 9*s.* 6*d.*; rice, corn, and peas 2, value of cargo 680*l.* Quebec, with timber and wine 1, value of cargo 46*l.* 16*s.* St. John's, New Brunswick, with lumber 1, value of cargo 67*l.* 10*s.* Stettin, Prussia, with rice and coffee 1, value of cargo 3863*l.* 14*s.* Jamaica, with rice and boards 1, value of cargo 1026*l.* Harbour Islands, with lumber, rice, and corn 1, value of cargo 159*l.* St. Jago de Cuba, with timber 1, value of cargo 22*l.* 15*s.*; with provisions 1, value of cargo 548*l.* Maranhão, in ballast 1. Mobile, in ballast 1. Total number of vessels 99. Total value of cargoes 732,069*l.* 11*s.* 3*d.*

PORT OF WILMINGTON.—Of the 30 British vessels which arrived in 1844, there were, from Great Britain, with ballast and specie 1, value of cargo 583*l.* 6*s.* 8*d.*; Barbadoes, with salt and specie 1, value of cargo 312*l.* 15*s.*; Demerara, with ballast and specie 3, value of cargo 895*l.* 16*s.* 8*d.*; Nevis, with ballast and specie 2, value of cargo 220*l.* 16*s.* 8*d.*; Antigua, with ballast and specie 6, value of cargo 1186*l.* 12*s.*; Trinidad, with ballast and specie 3, value of cargo 625*l.*; Jamaica, ballast and specie 2, value of cargo 979*l.* 3*s.* 4*d.*;

* One vessel arrived in distress, and departed with cotton. No value given.

Nassau, ballast and specie 4, value of cargo 750*l.*; Halifax, with potatoes 1, value of cargo 62*l.* 10*s.*; New York, in ballast 1; Turk's Island, with salt 1, value of cargo 86*l.* 6*s.* 8*d.*; salt and specie 1, value of cargo 250*l.*; St. Kitt's, in ballast and with specie 3, value of cargo 750*l.*; St. Vincent, in ballast and specie 1, value of cargo 208*l.* 6*s.* 8*d.* Total number of vessels, 30. Total value of cargoes, 6960*l.* 13*s.* 8*d.*

Of the 30 British vessels departed, there were for Great Britain, with turpentine and tar 2, value of cargo 1895*l.* 16*s.* 8*d.*; with lumber and tar 1, value of cargo 162*l.* 1*s.* 4*d.* Grenada, with lumber, rice, and tobacco 1, value of cargo 500*l.* Barbadoes, lumber, rice, and staves 1, value of cargo 250*l.*; lumber and shingles 1, value of cargo 76*l.* 0*s.* 10*d.* Antigua, lumber and staves 5, value of cargo 1153*l.* 2*s.* 6*d.*; lumber and shingles 1, value of cargo 250*l.* Montserrat, resin, tar, and rice 1, value of cargo 145*l.* 16*s.* 8*d.* Nevis, lumber and staves 2, value of cargo 343*l.* 13*s.*; staves and shingles 1, value of cargo 104*l.* 3*s.* 4*d.* Trinidad, lumber and corn 1, value of cargo 166*l.* 13*s.* 4*d.*; lumber and staves 1, value of cargo 142*l.* 10*s.*; lumber and rice 1, value of cargo 375*l.* Nassau, lumber and shingles 4, value of cargo 658*l.* 6*s.* 8*d.* Halifax, rice and tar 1, value of cargo 264*l.* 11*s.* 8*d.*; rice and naval stores 1, value of cargo 625*l.* Jamaica, lumber and shingles 1, value of cargo 187*l.* 10*s.*; lumber and rice 1, value of cargo 250*l.* St. Kitt's, lumber and staves 3, value of cargo 771*l.* 1*s.* 8*d.* Total number of vessels, 30. Total value of cargoes, 8361*l.* 9*s.* 8*d.*

Commerce and Navigation of Baltimore, 1844.—The following is a list of the foreign and coastwise arrivals at the port of Baltimore, during the year 1844, made up from the monthly tables published in the *Baltimore American*:—

Total Foreign—ships, 60; barques, 48; brigs, 198; schooners, 127. Total coastwise—ships, 17; barques, 55; brigs, 182; schooners, 229.

The whole number of arrivals, during the year 1844, was 1620. Of this number there were, American, 1508; British, 65; Bremen, 34; Hanoverian, four; Swedish, two; Spanish, two; Oldenburg, one; Sardinian, one; Holland, one; Hamburg, one; and Danish, one.

Commercial Navigation of Boston, in 1844.—The following tables embrace the arrivals and clearances at the port of Boston, during the year 1844, commencing on the 1st of January, and ending on the 30th of December:—

Arrivals.—Foreign—ships, 156; barques, 214; brigs, 598; schooners, 4247. Coastwise—ships, 121; barques, 191; brigs, 785; schooners, 4008; sloops, 152. Total number of arrivals for the year 1844, ships, 277; barques, 405; brigs, 1383; schooners, 5245; sloops, 152.

Of the above, there were, British, 15 barques, 131 brigs, and 1009 schooners; Sicilian, two barques and five brigs; Swedish, one barque and four brigs; Bremen, two ships and one brig; Prussian, one barque and two brigs; German, one brig; Hamburgian, four brigs; Dutch, one brig; Norwegian, one barque; Sardinian, one brig; Austrian, one barque; and the remainder, American.

Clearances.—Foreign—ships, 93; barques, 202; brigs, 515; schooners, 1166. Coastwise—ships, 205; barques, 211; brigs, 627; schooners, 1627; sloops, 104. Total number of clearances for the year 1844, ships, 298; barques, 413; brigs, 1142; schooners, 2973; sloops, 104.

Of the above, there were British, 15 barques, 130 brigs, and 1025 schooners; Sicilian, three barques and five brigs; Swedish, one barque and three brigs; Bremen, two ships and one brig; Prussian, one barque and two brigs; German, one brig; Hamburgian, four brigs; Dutch, one brig; Norwegian, one barque; Sardinian, one brig; and the remainder American.

A large number of wood coasters have also arrived, which are not included in the above estimate. The disparity between the arrivals and clearances is owing to the fact that a great number of the vessels which are reported as arrived, do not clear at the custom-house before sailing, being under licence.

During the year, the royal mail steamship *Britannia*, running between this port and Liverpool, has entered and cleared at the custom-house four times. The *Hibernia* has entered five, and cleared six times. The *Caledonia* has entered and cleared five times. The *Acadia* has entered five, and cleared four times.

Sugar.—In Louisiana alone in the United States is it produced in any quantity from the cane, and the quantity so produced is never sufficient for consumption of the United States, and in foreign markets it is only of importance as it supplies or fails to supply our home demand. The following table will show how varied and uncertain is the yield. An unfavourable time for planting or an early frost will reduce the probable yield one-half, and we are never actually sure of our crop until it be actually rolled.

NEW ORLEANS COTTON PRESS CHARGES.

Charges to Factors and Receivers.—Drayage, storage, and labour, piling up, and turning out for weighing, twenty-seven cents and a half per bale for the first sixty days, and ten cents per bale per month afterwards. All extra labour will be charged.

Charges to Shippers of Compressed Cotton.—Labour, in all cases, five cents per bale. If not ordered within fifteen days from the time it is received, ten cents per bale per month storage will be charged additional. All necessary repairs will be charged. Drayage on ship-board, within the first and second municipalities, twelve cents and a half per bale; within the limits of the third municipality, fifteen cents per bale.

Charges on Uncompressed Cotton.—All cotton remaining over night only, or longer, will be charged ten cents per bale per month, and all labour incurred.

All cotton changing ownership, or transferred from one party to another, will be charged new storage, and any labour which may be incurred.

All cotton hauled to the presses for compressing, will be charged the drayage to the press, in addition to that on ship-board.

All the foregoing charges will be considered payable in cash, and collected at least once per month.

It will be seen, that we have deducted from the New Orleans and Mobile statements, the quantity received at those ports from Texas—Texas being a foreign country. Our next annual statement will probably include Texas in the crop of the United States.

Our estimate of the quantity taken for consumption, does not include any cotton manufactured in the states south and west of Virginia, nor any in that state, except in the vicinity of Petersburg and Richmond.

The quantity of new cotton received at the shipping ports amounted to about 7500 bales, same as last year.

In regard to the crop now gathering, we have loud complaints of injury from drought in certain sections, while in others the yield is represented as good. It is too early yet to form any reliable conclusion as to the quantity that may reach the market.

In the New Orleans statement, we notice an allowance of 6000 bales for cotton sent up the river to the western states. As it is probable some of this cotton reaches Philadelphia and Baltimore "overland," we omit the overland item in our statement of the crop for this year.

ICE TRADE OF THE UNITED STATES.

The principal locality for cutting ice to be exported to foreign countries, is the Wenham Lake, near Boston. Boston and the suburb, or town of Charlestown, near the lake, are the principal places of export.

There are in Boston sixteen companies engaged in transporting ice to the East and West Indies, New Orleans, South America, and Europe, and to other warm climates. In 1830, the quantity of ice shipped from Charlestown to distant ports amounted to 30,000 tons. No less than 50,000 tons were exported from Boston. The expense to the shippers was 12,340 dollars, or about a quarter of a dollar a ton. The average receipts were 3,570,000 dollars; a single firm in Boston freighted 101 vessels, and a cargo was sent to the East Indies and exchanged pound for pound for cotton, which was sold at a profit in England. Sawdust, for packing, is worth three dollars per cord. Formerly, ice sold in New Orleans for six cents (*threepence*) per lb., and now sells for one cent (*one halfpenny*) per lb.; but more money is made from the increased consumption at one cent than was made at six cents. The ice is sawed into blocks by a machine, and is packed on board the vessel with straw and hay, in thin deal boxes, air-tight. One company expended 7000 dollars for hay alone. The annual crop of Wenham Lake ice is considered good at 200,000 tons, and can be cut and housed in about three weeks.

In September, 1833, the first cargo of ice from Boston was discharged at Calcutta.

Since 1833, the trade has increased greatly; and, from the small beginning at Boston, has extended from other northern ports; and a considerable quantity is now annually shipped at New York. Great improvements have been made in packing, so that the wastage is much reduced. Large quantities are shipped to New Orleans, and other southern ports; and the home consumption of ice has augmented largely. Salmon, from the state of Maine, and cod and other fish, from Boston, are packed in ice, and sent by the various railroads to the interior of western New England, and as far north as Buffalo.

The export of ice from Boston, for the month ending August 31, 1844, is as follows:—

The Wenham Lake is in an elevated position, and embosomed within hills. The lake has no inlet whatever; but is fed solely by springs which issue from

the rocks at its bottom, a depth of 200 feet from its surface. This depth explains the great solidity of the ice formed upon the lake.

The ice-houses are built of wood, with double walls; the space between which is filled with sawdust; thus interposing a medium, that is nearly a non-conductor of heat, between the ice and the external air: the consequence of which is, that the ice is not affected by the temperature of the external atmosphere.

The machinery employed for cutting the ice, was invented for that purpose. It is worked by men and horses.

"From the time when the ice first forms, it is carefully kept free from snow until it is thick enough to be cut; that process commences when the ice is a foot thick. A surface of some two acres is then selected, which at that thickness will furnish about 2000 tons; and a straight line is then drawn through its centre from side to side each way. A small hand-plough is pushed along one of these lines, until the groove is about three inches deep and a quarter of an inch in width, when the 'marker' is introduced. This implement is drawn by two horses, and makes two new grooves parallel with the first, twenty-one inches apart, the gauge remaining in the original groove. The marker is then shifted to the outside groove, and makes two more. Having drawn these lines over the whole surface in one direction, the same process is repeated in a transverse direction, marking all the ice out into squares of twenty-one inches. In the meantime, the 'plough' drawn by a single horse, is following in these grooves, cutting the ice to a depth of six inches.

"One entire range of blocks is then sawn out, and the remainder are split off toward the opening thus made, with an iron bar. This bar is shaped like a spade, and of a wedge-like form. When it is dropped into the groove, the block splits off; a very slight blow being sufficient to produce that effect, especially in very cold weather. The labour of 'splitting' is light or otherwise, according to the temperature of the atmosphere. 'Platforms,' or low tables of framework, are placed near the opening made in the ice, with iron slides extending into the water, and a man stands on each side of this slide, armed with an ice-hook. With this hook the ice is caught, and, by a sudden jerk, thrown up the 'slide' on to the 'platform.' In a cold day every thing is speedily covered with ice by the freezing of the water on the platforms, slides, &c., and the enormous blocks of ice weighing, some of them, more than two cwt., are hurled along these slippery surfaces, as if they were without weight.

"Forty men and twelve horses will cut and stow away 400 tons a day; in favourable weather 100 men are sometimes employed at once. When a thaw or a fall of rain occurs, it entirely unfits the ice for market, by rendering it opaque and porous, and occasionally snow is immediately followed by rain, and that again by frost, forming snow-ice, which is valueless, and must be removed by the 'plane.' The operation of planing is similar to that of cutting.

"In addition to filling their ice-houses at the lake and in the large towns, the company fill a large number of private ice-houses during the winter—all the ice for these purposes being transported by railway. It will easily be believed, that the expense of providing tools, building houses, furnishing labour, and constructing and keeping up the railway, is very great; but the traffic is so extensive, and the management of the trade so good, that the ice can be furnished, even in England, at a very trifling cost.

"Extensive ice-houses, in London and at Liverpool, have been constructed of stone, &c. Though transported in the heat of summer, it is not much reduced in bulk. The masses of ice are so large, that a small surface only is exposed to atmospheric action in proportion to their weight, and therefore do not suffer from their exposure to it, as the smaller and thinner fragments do, which are obtained in our own or other warmer climates. It appears, also, that ice frozen upon very deep water, is more hard and solid than ice of the same thickness obtained from shallow water."

THE Export of Ice from Boston for the Month of February, 1845, has been as follows:

Production of Hemp in Missouri.—A report made to the Missouri legislature, on the subject of hemp growing in that state, contains the following statistics:—"The chamber of commerce in St. Louis, in 1842, stated the crop of 1840, which was brought into market in 1841, at 1460 tons. A memorial of the citizens of St. Louis, to the Congress of the United States, made in 1841, states the hemp crop of 1841 at near 10,000 tons, and the crop of 1842 at near 17,000 tons. The crop of 1843, owing to the unfavourable weather, did not exceed that of 1842. These estimates are borne by other facts. The St. Louis *Price Current*, in summing up the imports and exports of the city for the year 1844, states that 6275 bales of hemp were exported from the city of St. Louis, during the year 1844. In addition to this, there were exported 5007 pieces of bagging, and 15,490 coils of rope. It is believed, says the *Louisville Journal*, that the exports registered are considerably below the actual amount."

In *Hunt's Magazine* it is stated—

"*The Egg Trade in Cincinnati.*—Every day develops some new illustration of the enterprise of our people. The ice trade of the east has grown up, in a few years, to importance; employing a considerable amount of tonnage. In the west, the egg trade bids fair to rival it. The business in that fragile commodity, as we gather from the *Cincinnati Gazette*, is quite an item in the sum of her productive industry. One firm alone, in Cincinnati (Townsend and Co.), during the first six months of 1845, shipped to New York 234 barrels of eggs; to Baltimore, seventy barrels; and to New Orleans, 3976 barrels! Each barrel contains ninety dozen, which makes the aggregate shipment 4,624,400 eggs! During the year ending as above, the egg trade of this firm amounted to 36,144 dollars 60 cents. There are five other houses in Cincinnati engaged in the business. The foreign egg trade of Cincinnati, the past year, has amounted to 10,700 barrels, which is 963,000 dozen, or 11,556,000 eggs! The aggregate value of this trade, for the year, according to the data here given, is 90,361 dollars 50 cents. The business is a very hazardous one, owing to the great fluctuations in the New Orleans market. In the course of the past year, for example, western eggs have sold there as high as twenty-two dollars per barrel, and as low as three dollars. In addition to this export trade, these establishments do also a heavy home trade. That of Townsend and Co. supplies regularly five steamboats, with thirty-six barrels a trip; which, at twelve trips a year, is 432 barrels. It also furnishes constantly the consumption of several of the largest hotels, which use at least 200 barrels per year, and does a retail business, amounting to not less than thirty-three barrels per year. These several amounts make 725 barrels to add to the 4280 barrels shipped; which gives an aggregate of 5005 barrels, or 450,450 dozen, as the annual trade of this one house. Besides this, the annual city consumption is estimated at 1,213,333 dozen. A further recapitulation shows the following result as to value:—

	dollars	cts.
Value of 10,700 barrels of eggs shipped from this port, at eight dollars forty-four cents and a half per barrel	90,361	50
Value of 1,213,333 dozen eggs consumed in this city, at eight cents per dozen	97,066	64
Total annual value of the egg trade of Cincinnati	187,428	14

PROGRESS OF THE NEW ENGLAND WHALE FISHERY.

The annual statement of this important branch of commerce, including the imports and exports of oil and whalebone, average prices, progress of the fishery, &c., as published in the *Whaleman's Shipping List*, contains matter of much interest to those engaged in the whale fishery. The imports of sperm oil and whalebone into the United States, from January 1, 1844, to January 1, 1845, in 199 ships and barques, twenty-three brigs, and sixteen schooners and sloops, were 139,594 barrels of sperm, 262,047 barrels of whale oil, and 2,532,445 pounds of bone.—See *Whale Fishery of the United States*.

IMPORTS of Sperm and Whale Oil, from 1838 to 1844, inclusive.

YEARS.	Sperm.	Whale.	YEARS.	Sperm.	Whale.
	barrels.	barrels.		barrels.	barrels.
1838.....	132,356	726,532	1842.....	166,637	164,611
1839.....	117,336	729,783	1843.....	151,265	206,727
1840.....	157,791	707,904	1844.....	130,374	262,617
1841.....	159,304	707,314			

The average price of oil, during the year 1844, has been ninety cents and a half to ninety cents and three-quarters per gallon for sperm, and thirty-six cents and a half to thirty-six cents and two-thirds per gallon for whale oil. Average price of bone, forty cents. January 1, 1845, prices:—Sperm, eighty-eight cents; whale, thirty-one cents to thirty-four cents; whalebone, thirty-eight cents to forty cents. The quantity of crude sperm oil in the country, out of the hands of manufacturers, on the 1st of January, 1845, is estimated at 32,992 barrels; and the amount of crude whale oil at 32,950 barrels. The number of vessels employed in the whale fishery, on the 1st of January, 1845, was 643 ships and barques, thirty-five brigs, seventeen schooners and sloops—in all, 218,655 tons. In January 1, 1844, the number engaged in the New England whale fishery, were 595 ships and barques, forty-one brigs, nine schooners and sloops—tonnage, 200,147 tons.

Mr. Grinnell, of New Bedford, Massachusetts, a member of Congress, stated in a speech,—

"I have prepared, with great care, a table from authentic sources, to show the consumption of domestic and foreign articles by our whaling fleet, now consisting of 645 ships, barques, brigs, and schooners, tonnage 209,000 tons; cost, at the time of sailing, 20,000,000 dollars; manned by 17,500 officers and seamen, one-half of whom are green hands when the vessels sail. By this table it will be seen, that the annual consumption by this fleet is 3,845,500 dollars; only 400,000 dollars is of foreign articles. The value of the annual import of oil and whalebone in a crude state is 7,000,000 dollars; when manufactured, it probably is increased in value to 8,000,000 dollars, or 9,000,000 dollars. The whole amount of exports of oil, whalebone, and sperm candles, is only 2,000,000 dollars, leaving 6,000,000 dollars, or 7,000,000 dollars, to be consumed in this country.

"This fleet of whaling ships is larger than ever pursued the business before. Commercial history furnishes no account of any parallel; our ships now outnumber those of all other nations combined, and the proceeds of its enterprise are in proportion and diffused to every part of our country. The voyages of these engaged in the sperm fishery average three years and a half; they search every sea, and often cruise three and four months with a man at each mast-head on the look-out, without the cheering sight of a whale."

NEW SOUTH WALES AND VAN DIEMAN'S LAND WHALE FISHERY.

In 1836 and 1837, sixty-eight ships were employed in the whale fishery belonging to these colonies; in 1844, the number is said to be reduced to thirty ships.

The Bay of Islands, New Zealand, has long been the favourite resort of ships engaged in the sperm or deep sea fishery; and it is considered to be the most convenient port which they could touch at in the whole of the South Pacific.

The natives in that neighbourhood, who have revolted against the government, are expert whale fishers; and might, it is said, be advantageously employed. They are good seamen, and one of them is, or was, acting as a mate on board a whaling ship belonging to Mr. Enderby.

NEW POST-OFFICE LAW.

A law was passed by Congress, 3rd of March, 1845, which, though indigested, and far from sound in all its provisions, constitutes a great reform of the previous law. It diminishes the rate of postage about one-half, and stipulates,

That from and after the first day of July next, members of Congress and delegates from territories, may receive letters not exceeding two ounces in weight, free of postage, during the recess of Congress, any thing to the contrary in this act notwithstanding; and the same franking privilege which is granted by this act to the members of the two Houses of Congress, is hereby extended to the vice-president of the United States; and in lieu of the rates of postage now established by law, there shall be charged the following rates, *viz.*: For every single letter in manuscript, or paper of any kind by or upon which information shall be asked for or communicated in writing, or by marks and signs, conveyed to the mail for any distance under 300 miles, five cents; and for any distance over 300 miles, ten cents; and for a double letter there shall be charged double these rates; and for a treble letter triple these rates; and for a quadruple letter quadruple these rates; and every letter or parcel not exceeding half an ounce in weight shall be deemed a single letter, and every additional weight of half an ounce, or additional weight of less than half an ounce, shall be charged with an additional single postage. And all drop letters, or letters placed in any post-office, not for transmission by mail, but for delivery only, shall be charged with postage at the rate of two cents each. And all letters which shall hereafter be advertised as remaining over in any post-office, shall, when delivered out, be charged with the costs of advertising the same in addition to the regular postage, both to be accounted for as other postages now are.

2. That all newspapers of no greater size or superficies than 1900 square inches may be transmitted through the mail, by the editors or publishers thereof, to all subscribers at other persons within thirty miles of the city, town, or other place in which the paper is or may be printed, free of any charge for postage whatever; and all newspapers of and under the size aforesaid, which shall be conveyed in the mail any distance beyond thirty miles from the place at which the same may be printed, shall be subject to the rates of postage chargeable upon the same under the thirtieth section of the act of Congress, approved the 3rd of March, 1825, entitled "An Act to reduce into one the several Acts for establishing and regulating the Post-Office Department," and upon all newspapers of greater size or superficial extent than 1900 square inches, there shall be charged and collected the same rates of postage as are prescribed by this act to be charged on magazines and pamphlets.

3. That all printed or lithographed circulars and handbills or advertisements, printed or lithographed on quarto, post, or single-cap paper, or paper not larger than single-cap, folded, directed, and unsealed, shall be charged with postage at the rate of two cents for each sheet, and no more, whatever be the distance the same may be sent; and all pamphlets, magazines, periodicals, and every other kind and description of printed or other matter (except newspapers), which shall be unconnected with any manuscript communication whatever, and which is or may be lawful to transmit by the mail of the United States, shall be charged with postage at the rate of two cents and a half for each copy sent, of no greater weight than one ounce, and one cent additional shall be charged for each additional ounce of the weight of every such pamphlet, magazine, matter, or thing, which may be transmitted through the mail, whatever be the distance the same may be transported; and any fractional excess of not less than one-half of an ounce, in the weight of any such matter or thing, above one or more ounces, shall be charged for as if said excess amounted to a full ounce.

4. That the postmaster-general be, and he is hereby authorised, upon all mail routes over or upon which the amount of matter usually transported, or which may be offered or deposited in the post-office or post-offices for transportation, is or may become so great as to threaten materially to retard the progress, or endanger the security of the letter mail, or to cause any considerable augmentation of the cost of transporting the whole mail at the present rate of speed, to provide for the separate and more secure conveyance of the letter mail, at a speed at least equal to that at which the mail is now transported over such route, taking care to allow in no case of any greater delay in the transportation of the other matters and things to be transported in the mail on any such route, than may appear absolutely necessary, regard being had to the cost of expediting its transportation, and the means at his disposal, or under his control for effecting the same.

7. That the Act of Congress, entitled "An Act authorising the governors of the several states to transmit by mail certain books and documents," approved June the thirtieth, one thousand eight hundred and thirty-four, shall remain and continue in full force, any thing hereinbefore to the contrary notwithstanding; and the members of Congress, the delegates from territories, the secretary of the Senate, and the clerk of the House of Representatives, shall be, and they are

herely authorised to transmit, free of postage, to any post-office within the United States, or the territories thereof, any documents which have been or may be printed by order of either house of Congress, any thing in this law to the contrary notwithstanding.

8. That each member of the Senate, each member of the House of Representatives, and each delegate from a territory of the United States, the secretary of the Senate, and the clerk of the House of Representatives, may, during each session of Congress, and for a period of thirty days before the commencement, and thirty days after the end of each and every session of Congress, receive through the mail, free of postage, any letter, newspaper, or packet, not exceeding two ounces in weight, and all postage charged upon any letters, packages, petitions, memorials, or other matters or things received during any session of Congress, by any senator, member, or delegate of the House of Representatives, touching his official or legislative duties, by reason of any excess of weight above two ounces, of the matter or thing so received, shall be paid out of the contingent fund of the house of which the person receiving the same may be a member. And they shall have the right to frank written letters from themselves during the whole year, as now authorised by law.

9. That it shall not be lawful for any person or persons to establish any private express or expresses, for the conveyance, nor in any manner cause to be conveyed, or provide for the conveyance or transportation, by regular trips, or at stated periods or intervals, from one city, town, or other place, to any other city, town, or place in the United States, between, and from, and to which cities, towns, or other places, the United States mail is regularly transported, under the authority of the post-office department, of any letters, packets, or packages of letters, or other matter properly transmittable in the United States mail, except newspapers, pamphlets, magazines, and periodicals: and each and every person offending against this provision, or aiding or assisting therein, or acting as such private express, shall, for each time any letter or letters, packet or packages, or other matter properly transmittable by mail, except newspapers, pamphlets, magazines, and periodicals, shall, or may be, by him, her, or them, or through his, her, or their means or instrumentality, in whole or in part, conveyed or transported, contrary to the true intent, spirit, and meaning of this section, forfeit and pay the sum of one hundred and fifty dollars.

NEW YORK POST-OFFICE.

The North Mail, *viz.* Albany, Cananotagus, Rochester, and Buffalo, will be closed daily at 6 a. m. and 3 p. m.

This Mail includes the Province of Canada.

The Mail on the West side of the Hudson, *viz.* Hackensack, Haverpore Works, Esopus, New Baltimore, and the Counties of Tompkins, Chemung, Ioga, Sullivan, &c., closes daily at 6 a. m. and 3 p. m.

The Mail for wharves landing on the West side of the Hudson river, closes daily at 6 a. m. and 3 p. m.

The Mail for Yorkers, Song Song, Poshkill, and all the offices on the East side of the river closes daily at 6 a. m. and 3 p. m.

The Eastern steamboat Mail for New Haven, Hartford, &c., closes daily, except Sundays, at 6 a. m. and 3 p. m.

The Mail for Boston, *viz.* Long Island Railroad, closes daily, except Sundays, at 6 a. m. and 3 p. m.

The steamboat Mail for Boston, *viz.* Stonington and Providence, closes daily at 6 a. m. and 3 p. m.

The steamboat Mail, for Boston, *viz.* Norwich and Worcester, closes daily at 6 a. m. and 3 p. m.

The Eastern land Mail, *viz.* Westchester, Norwalk, &c., to

New Haven, closes daily, except Sunday, for which day it is closed at 6 p. m. Saturday, and leaves this city at 6 a. m. Sunday at 6 a. m.

The Mail, *viz.* White Plains, Bedford, and Rutherford, to Danvers, Conn., closes daily, except Sundays, at 7 a. m.

The great Southern Mail, including the Mail for the Western States, closes daily at 7 a. m.

Southern way Mail, which supplies the offices in New Jersey, including Philadelphia, Baltimore, and Washington City, closes at 7 a. m. and 3 p. m.

Mails for Brooklyn, close daily at 7 a. m. and 3 p. m.

Mails for Jamaica, Oyster Bay, Hempstead, &c., on Long Island, close daily at 7 a. m. and 3 p. m.

The Mails for other places on Long Island, close on Tuesday, Thursday, and Saturday, at 7 a. m.

The Mail for Flushing, *viz.* Williamsburg, closes daily, except Sunday, at 7 a. m. and 3 p. m.

The Mail for Staten Island, closes daily, except Sunday, at 7 a. m. and 3 p. m.

The Mail, *viz.* Bridgeport and Housatonic Railroad, is closed daily, except Sundays, at 7 a. m. and 3 p. m.

CHAPTER XXXI.

TRANSATLANTIC NAVIGATION.

We were among the first who advocated the establishing a communication by steam power across the Atlantic. We urged the attempt on great public grounds.* But not only the prejudices of the public were against the probability of navigating the Atlantic by steam power—but the project was haughtily scorned by some legislators who then did, and now do, consider themselves no mean statesmen.

When we consider the progress of navigation from the period when the Dutch

* See Macgregor's *British America*, vol. xi. chap. ii., on Transatlantic Navigation.

possessed New York,—when we reflect upon the wonderfully increased intercourse between the United Kingdom and the United States,—and when we estimate the comparatively speaking limitation of the distance, by calculating the time required now, with that occupied formerly, in passing to and fro between both countries,—it would be rash and hazardous to give an absolute opinion on the future elements, rapidity and extension of navigable power. It was but late in the world's history, when a Dutch ship performed the voyage, by leaving Rotterdam or Amsterdam in the spring of one year—sailing only during the day, and furling her sails and laying-to during the night,—and on reaching New York, then called New Amsterdam, this ship was discharged, unrigged, and laid up for the winter. On the following spring, this ship was rigged, her condition examined and repaired, then laden with wood, fish, or furs, and then made her homeward voyage during the summer, as slowly as her outward voyage was performed the preceding year.

The voyage was afterwards performed out and home during the same year. English ships then made two voyages during the year: and growing bolder, three voyages to and from America were made annually by the same ship. Those splendid vessels, the Liverpool and New York line of sailing-packets, were then established, and the intercourse between Europe and America astounded the world. Steam-ships are now seemingly about supplanting those sailing-ships; at least in the carriage of passengers.

The space between the Old and New World ceases to be calculated by miles and leagues; days and hours measure the distance. Liverpool and Halifax are brought within ten days, and Liverpool and Boston within twelve days of each other.

It is by means of this powerful agency,—of this rapid, mighty, and certain intercourse, that all possible good may be extended from, or all possible evil inflicted by, one country to, or upon, the other. The era of the successful establishment of steam navigation has been the most important to trade, intercourse, and consequently of extending knowledge and civilisation, that has occurred since the discovery of America, and, since the first voyage was accomplished by sea from Europe to India.* Knowledge and civilisation have advanced, or retrograded, according to the extent to which the intercourse between individuals and nations has been rendered either easy, quick, and frequent,—or difficult, tardy, and of rare occurrence. That means, which shall bring nations, and kindred,

* In a work long out of print published about ten years ago, and containing sketches relative to men and things, chiefly on the continent of Europe, we find the following passage:

" FIRE! WATER! STEAM! what can *philosophy* have to do with *these*, or *these* with *philosophy*? Undoubtedly, Yes. Steam in the first place diminishes one of the heaviest pains and penalties inflicted on the race of original sinning Adam,—"*By the sweat of thy brow shalt thou eat thy bread*," for while it lessens the toil, it multiplies the productions that are useful to mankind. By its gain upon time, over distance, it reduces the space which separates countries, and by the same it lengthens life, by calculating its duration according to the number of acts that mark our existence, and not by the days which compose our physical sojourn.

" By rendering the intercourse of nations easy, cheap, frequent, and certain,—by its multiplying and diffusing the productions of the press,—by its interchanging readily the ideas of mankind, and the commodities of the earth, it forms the most effectual means of diffusing knowledge, dispelling fanaticism, subverting despotism, and repressing anarchy."—*My Note Book*. By J. Macgregor. London, 1835.

and people into the nearest social intercourse, will be the sure and irresistible power destined to civilise the universe: by the facility with which intelligence, and consequently instruction, will be conveyed, by sea and by land, over every part of the world, and by the rapidity and ease with which individuals of one nation may be made acquainted with those of all others.

Steam-vessels now ply along the coasts of Africa, in the Chinese seas, and along the shores and rivers of New Holland.

The steam-ships now employed between London and Scotland are of enormous power and magnitude. So are those which run between the Mersey and Clyde, and between the two latter rivers and the several ports of Ireland.

The fleet of the General Steam Navigation Company maintains a constant intercourse with the ports of France, Holland, and Germany, as well as in the coasting trade of the British channel.

The states of continental Europe are also advancing in the acquisition of steam power. France, Austria, and Russia, are the foremost, in the number of their steam-ships. Austria excels all the states of the continent in merchant steam-ships. France and Russia in steam-ships of war. The Italian states, especially Naples and Tuscany, possess several well built and well navigated steam-ships. Prussia and Holland, on the Rhine, contribute greatly to the facility of intercourse. Belgium has made attempts, at great expense, to establish a transatlantic line of steam-packets. The attempt has failed. The Hanse Towns, Denmark, and Sweden, also possess steam-ships, but only on a comparatively small scale. Greece and Turkey are far behind other countries in the possession of steam-vessels. The Greeks, were their country and commerce in a flourishing condition, would, no doubt, manage steam-ships as ably as they certainly have their sailing vessels. The Turks have been clumsy mariners, and their few steam-vessels are wretchedly managed. Of all orientalists, the ruler of Egypt has made an extraordinary advance in the acquisition of powerful steam-ships.

In 1814, there was but one steamboat belonging to the British empire. During thirty years the number has increased to about 1000 British steam-boats which are now navigating all parts of the world.

In 1845, the British government employs a magnificent fleet of steam-ships, managed by, and belonging to, a private association, which sail, *semi-monthly* for eight, and *monthly* for four, months in the year, between Liverpool, Halifax, and Boston. From Boston, the great means of intercourse, by steamboats and railroads, diverges to all parts of North America—extending to the furthestmost of the great lakes, and up and down the navigable rivers, flowing from the Rocky Mountains. Iron is made to swim, in the form of a ship (the Great Britain) exceeding 3600 tons, burden, impelled forward from Liverpool to New York, against the currents, raging storms, and seas of the Atlantic, by an invisible power, moved by the resistless force of fire causing the expansion of water.

Another splendid fleet of steam-ships, belonging also to a private company,

are employed by the government to maintain a monthly intercourse between the United Kingdom, by Southampton, and all the islands of the West Indies and the states of Mexico and South America.

A third and mighty fleet, belonging to a great company, and employed by the government, sails monthly from Southampton to the European Peninsula, and by way of Gibraltar to Malta and Alexandria, with a branch to the Levant and Constantinople. The same company conveys the government mails, and passengers, by three of the most powerful steam-ships in the world, from Suez, down the Red Sea to Ceylon, Madras, and Calcutta; and that company has contracted to extend the established chain between Southampton and India, to Singapore and the Chinese empire, by the employment of several powerful steam-ships, nearly all constructed. This steam line between England and China is now complete, by which we have received an English newspaper printed at Hong Kong only fifty-six days before our having read it in London.

A British company has for some years established a line of steamers along the western coasts of South America; and the Hudson Bay Company have a steamship on the western coast of North America. The East India Company employs one steam-ship in conveying mails between Suez and Bombay; and several steam-vessels are employed in India, and others in the eastern or Chinese seas, by the British government, as vessels of war.

France has projected four great lines of Transatlantic steam-ships—when they will, or whether they will, be established, we have neither the power, nor the temerity to decide.* We cannot discover any natural obstacle in regard to France and America, to prevent French Transatlantic ships competing with those of England; but, according to our mere instinctive judgment, we are inclined to the belief that the great connecting line of intercourse, between Europe and America, will continue to be maintained direct, between ports in the United Kingdom, and ports

- * The following appeared as the programme of the projected line of French steam-ships

First great line—from Havre to New York. Four steam-ships are to be placed on this line; the departures are to take place once a fortnight. Fifteen days are allowed for each passage, and ten days at New York—in all, forty days. Twenty days are to be allowed to each vessel at Cherbourg, between every voyage, to rest the crew, and repair the vessel and engines.

Second great line—from Bordeaux to Martinique. Three steamers are to be placed on this line; the departures are to take place once a month. Two days are allowed for the passage from Bordeaux to Corunna, and ten hours' stay there; five days twelve hours for the passage from Corunna to the Azores, and one day's stay there; twelve days sixteen hours for the passage from the Azores to Martinique, the steamers to remain ten days at Martinique. Twenty days are allowed for the return passage from Martinique to Bordeaux—in all, forty days' sailing, and eleven days and a half stoppages. Thirty-seven days are allowed between every voyage, at Rochefort or Bordeaux, for repairs and stoppages.

Third great line—from Marseilles to Martinique. Three steamers are to be placed on this line; the departures are to take place once a month. From Marseilles to Barcelona, one day, and four hours' stay; from Barcelona to Cadiz, three days, and twenty-four hours' stay; from Cadiz to Madeira, three days, and twenty-four hours' stay; from Madeira to Martinique, fourteen days. The steamer is to remain ten days at Martinique. Twenty-one days are allowed for the return voyage from Martinique to Marseilles—in all, forty-two days' sailing, and fourteen and a half days' stoppages. Thirty-three days are to be allowed at Toulon or Marseilles, between every voyage, for repairs and repose.

Fourth great line—from St. Nazaire to Rio Janeiro. Four steamers are to be placed on this line; the departures are to take place once a month. From St. Nazaire to Lisbon, three days and a half, twenty-four hours' stay; from Lisbon to Goree, eight days.

in America; and that such intercourse will be conducted either by British subjects, or by American citizens, or, as is most likely, by both, jointly or separately.

The progress and great extension of steam navigation along the coasts and rivers of the United States, and of the river St. Lawrence, and the great lakes of North America, we have described under a previous head.

The sailing ships belonging to the United States, which sail regularly from New York, Boston, Philadelphia, and several other ports, to the ports of the United Kingdom, to Havre, Bordeaux, to ports in the Mediterranean—and to the ports of Holland and the north of Europe, are equipped in a style of extraordinary perfection and beauty, and navigated with the utmost nautical skill. Those which sail between New York and Liverpool, and New York and London, are truly magnificent, and their accommodations, though gorgeous, combine for passengers all the luxuries and comforts of splendid hotels.

The following were among the principal large Transatlantic vessels belonging to Philadelphia in 1841. This table will prove valuable for future reference.

Of brigs and brigantines, 75; or a total of square-rigged vessels, 141.

Cargoes of American produce, which these ships convey to England, and of British manufactures, are of enormous value. The carrying trade of both (with the exception of cotton wool and naval stores), is, however, comparatively limited, by the pernicious, and fallacious, protective duties of England and America.

The following are the lengths of several voyages of the principal sailing ships of the packet lines between New York and Liverpool.

The longest outward passage was made by the Europe, she having been thirty-six days, and the shortest by the England, in eighteen days. All the outward passages average twenty-two days and a half. The homeward passages average thirty-three days and seventeen hours.

The Orpheus made a homeward passage in twenty-two days, the Oxford in twenty-three, and the England in twenty-five, making the three shortest. The longest was made by the North America, in forty-eight days.

The different Lines of New York Sailing Vessels during the following Months of 1845 were, according to these respective Programmes, as under.

The Proprietors of the several Lines of Packets between New York and Liverpool have arranged for their sailing from each port, to succeed each o'her in the following order, viz.:—

These ships are all of the first class, upwards of 1000 tons burden, built in the city of New York, with such improvements as combine great speed with unusual comfort for passengers. Every care has been taken in the arrangement of their accommodations. The price of passage hence is 100 dollars, for which ample stores will be provided. These ships are commanded by experienced masters, who will make every exertion to give general satisfaction.

Neither captains nor owners of these ships will be responsible for any letters, parcels, or packages sent by them, unless regular bills of lading are signed therefore.

Letters by the packets will be charged 12½ cents per single sheet, 50 cents per ounce, and newspapers one cent each. April 27.

The average of passages from New York to Bristol, thirteen days and three-quarters. The shortest passage was twelve days and a quarter, the longest fifteen days.

The average of passages from Bristol to New York was sixteen days and one-eighth, the shortest having been thirteen days, the longest twenty-one days and a half.

The average of all the passages, out and home, was fifteen days. The whole time employed in the first fifteen passages, excluding fifty-two days, during which the ship lay up refitting, was twelve months and one day. The whole time spent at sea, in the fifteen passages, was 22½ days. In these 22½ days the ship must have sailed, in all, about 51,000 miles, giving an average progress of 22½ miles per day, and about nine and a half miles per hour, out and home, summer and winter.

By one of the passages from New York to Bristol, despatches by the ship were received in Liverpool and London on the thirteenth day after leaving New York, say on the evening of the 17th of October, having left New York on the afternoon of the 4th of that month. By the same, and by one other passage, passengers and despatches reached Paris, by way of England, on the fifteenth day.

STEAM BETWEEN NEW YORK AND LIVERPOOL.

The Great Western Steam-ship Company's steam ship, the Great Western, 1200 tons, 100 horse power, R. R. Matthews, Esq., commander; the Great Britain, 900 tons, 1000 horse power, Lieutenant James Hoskins, R. N., commander, are intended to sail as follows.

GREAT WESTERN.

From Liverpool.	From New York.
Saturday, May 17	Thursday, June 12
Saturday, July 5	Thursday, July 31
Saturday, Aug. 23	Thursday, Sept. 18
Saturday, Oct. 11	Thursday, Nov. 6

GREAT BRITAIN.

From Liverpool.	From New York.
Saturday, July 26	Saturday, Aug. 30
Saturday, Sept. 27	Saturday, Oct. 25
Saturday, Nov. 24	Saturday, Dec. 20

Fare per Great Western, 100 dollars, and five dollars steward's fees. Fare per Great Britain will be announced in a future advertisement.

For freight or passage, apply to Richard Irwin.

A TABLE of all the Passages of the Transatlantic Steam-Ship Company's Ships, Royal William and Liverpool, between Liverpool and New York, from July, 1838, to June, 1839, showing the time of their departure from, and arrival at, each port.

Average Royal William and Liverpool from England,				Average Royal William and Liverpool to England, 15			
18 days				days.			

These passages are calculated from dock to dock, and, it will be observed, the Liverpool's passages are mostly made in the winter months, not the best calculated for making short voyages. Her four trips to the westward have been made within forty-two hours of the same time. She has, with but one exception, made the southern passage, thereby lengthening her voyage but avoiding the risk of running upon ice, and obtaining for her passengers mild and fine weather.

The *Great Western* will have performed about eighty voyages to and from Bristol or Liverpool and New York from the 8th of April, 1838, to December, 1845. Average voyages, fifteen days twelve hours, outward. The passages from Bristol being somewhat longer. The average of the homeward voyages was thirteen days nine hours. One voyage from Bristol, touching at Madeira, was performed to New York in twenty-nine days one hour, including one day four hours' stoppage at Madeira.

The following statement of the time occupied in making the passage between Liverpool and Halifax, is a most important document in steam-navigation, as not only showing the certainty of a quick communication across the Atlantic at all times of the year, but at the average rate at which it may be made. The passage out, gives 7.86 miles per hour; while that home (influenced by prevailing winds and currents), gives 9.3 miles. The mean between these may be taken as the average speed obtained at sea, or what may be called the *sea-rate*. In this case, the *sea-rate* is 8.58 miles per hour.

PASSAGES, to and from Liverpool and Halifax, of the British and North American Royal Mail Steamships, from July 4, 1840, to June 4, 1842.

MARSEILLES LINE OF PACKETS.

The undermentioned ships will be regularly despatched from hence on the 1st, and from Marseilles on the 10th of each month during the year, as follows:

SHIPS.	CAPTAINS.	From New-York.	From Marseilles.
Gaston	Stephen Coulter	April 1	June 10
Missouri	John Silvester	May 1	July 10
Prince de Join	Wm. W. Lawrence	June 1	Aug. 10
St. Louis	G. Hager	July 1	Sept. 10
Nebraska, du d'x.	Hollespont	Aug. 1	Oct. 10

They are all fast-sailing, coppered, and copper-fastened vessels, and commanded, or to be commanded, by men of experience. Their accommodations for passengers are all that need be desired in point of comfort and convenience, having excellent state-room accommodations.

Punctuality in the days of sailing from both ports may be relied on.

Goods addressed to the agents, will be forwarded free of other charges than those actually paid.

NEW YORK AND HAMBURG PACKETS.

The following ships sail from New York to Hamburg on stated days:

Barque Newton, Captain Wrentholtz.
Ship Howard, Captain Paulsen.
Barque Miles, Captain Ehlers.
Barque Franklin, Captain Steelsboom.
Barque Washington, Captain Kruger.
Ship Stephani, Captain Roloffs.
Ship Braren, Captain Flor.

These ships are all coppered and copper-fastened, and commanded by men of experience in the trade. Having good accommodations for cabin and stowage passengers, persons wishing to have their friends from Germany can secure their passage. Other ships are also engaged in the trade with Hamburg, Bremen, &c.

LOUISIANA AND NEW-YORK LINE OF PACKETS.

For the better accommodation of shippers, a ship is despatched from New York on the 1st, 5th, 10th, 15th, 20th, and 25th, of each month, commencing the 10th of October, and continuing until May, when regular days are appointed for the remainder of the year, whereby great delays and disappointments will be prevented during the summer months. The following ships are employed in this arrangement:

Ship St. Mary, Capt. Foster.
Ship Mississippi, Capt. Hubbard.
Ship Shakespeare, Capt. Chester.
Ship Yarrow, Capt. Wibray.
Barque Genesee, Capt. Minot.
Ship Oswego, Capt. Wood.
Ship Martha Washington, Capt. Stevens.
Ship Sartelle, Captain Taylor.

These ships were all built in the city of New York, expressly for packets, are of a light draft of water, have recently been newly coppered, and put in splendid order, with accommodations for passengers unequalled for comfort. They are commanded by experienced masters, who will make every exertion to give general satisfaction. They will at all times be towed up and down the Mississippi by steamboats.

HOLMES'S LINE.

To sail every ten days during the season:

Ship Orleans, S. Sears, master.
Ship Arkansas, Bunker, master.
Ship Alabama, D. M. Bunker, master.
Ship Saratoga, W. H. Russell, master.
Ship Louisa, Leavitt, master.
Ship Renss, Clark, master.
Ship Saltuna, Dennis, master.
Ship Vicksburg, Berry, master.

These are all fast-sailing, coppered, and copper-fastened vessels, built expressly for this trade; commanded by men of great experience, and will insure at the lowest rates. They will at all times be towed up and down the Mississippi by steamboats, and will sail punctually as advertised. Great care will be taken of all goods shipped by this old and well-known line; and every exertion made to accommodate both shippers and passengers.

SHIPPING in the Trade of France and the United States, as advertised in the Havre List for the following Months in 1845.

BRITISH NAVIGATION WITH THE NORTH AMERICAN COLONIES.

The Transatlantic ships employed in trade between the United Kingdom and the British North American colonies, are adapted in size to the cargoes which they carry, and the depth of water in the colonial or British ports, in which they load and discharge.

The ships which carry timber from the ports of the *St. Lawrence*, *haleur bay*, *Miramichi*, and the *Bay of Fundy*, range from 150 tons to above 1000 tons. The principal ships laden with timber, &c., from the North American colonies, which discharged their cargoes at the ports of *London* and *Liverpool*, during the first six months of the year 1845, were the following, viz.:—

PORT OF LONDON.—The *Themis*, of *St. John's*, *New Brunswick*, from *St. John's*, 1004 tons, 30 men. The *Schoodiac*, of *St. Andrew's*, *New Brunswick*, from *St. Stephen's*, 1005 tons, 31 men. *Princess Royal*, of *St. John's*, *New Brunswick*, from *St. John's*, 1096 tons, 29 men. *Indus*, of *Glasgow*, 822 tons, 26 men. *Manchester*, of *Quebec*, 825 tons, 25 men. The greater number of the other ships in this trade, and those which discharge at the port of *London*, the *Clyde*, *Leith*, *Bristol*, *Cork*, &c., range from 300 tons to 700 tons. Those which are laden at the shallow ports of the North American colonies, with timber and deals, and discharge at the shallow ports of the United Kingdom, range as low as from 300 tons to about 120 tons.

Vessels employed in the trade between the United Kingdom and *Newfoundland*, are seldom above 200 tons, and frequently of much less burden. Those trading with *Nova Scotia*, *Cape Breton*, and *Prince Edward Island* (some of the timber ships excepted), are usually of moderate burden.

WEST INDIES.—The ships engaged in the *West India* trade would formerly be considered of very large burden; but compared with those engaged in the *North American* trade, they are not usually half the capacity.

SOUTH AMERICAN TRADE.—Generally, the trade carried on with *South America*, is in small ships and brigs.

EAST INDIES AND CHINA.—The most splendid ships belonging to the British empire are those employed in the trade with *India* and *China*. This was at all times the case. These magnificent ships are built chiefly in the river *Thames*, the *Tyne*, the *Mersey*, and the *Clyde*. The following vessels are among the principal ships which arrived during the first six months of the year 1845, from *India*, &c., in the port of *London*, viz.:—

From *Calcutta*, the *Wellesley*, of *London*, 1013 tons, 60 men. *Monarch*, of *London*, 1282 tons, 84 men. *Prince of Wales*, of *London*, 1241 tons, 84 men. The

Queen, of London, 1244 tons, 82 men. *Gloriana*, of Newcastle, 1056 tons, 62 men. *Ellenborough*, of Newcastle, 1031 tons, 62 men. *Queen Glendower*, of London, 989 tons, 67 men. *Bucephalus*, of Newcastle, 985 tons, 64 men. *Southampton*, of London, 971 tons, 68 men. *Maidstone*, of London, 938 tons, 52 men. *Seringapatam*, of London, 870 tons, 65 men. *Somes*, of London, 785 tons, 29 men. *Union*, of London, 750 tons, 27 men. *Westminster*, of London, 610 tons, 26 men. *China*, 658 tons, 28 men. Besides a great many other ships of from 400 tons to 600 tons.

From MADRAS, the *Equestrian*, of London, 800 tons, 37 men. The *Neptune*, of London, 645 tons, 30 men. The *Larkins*, 700 tons, 25 men. Besides other ships of from 300 tons to 600 tons.

From BOMBAY, the *Universe*, of Dundee, 719 tons, 26 men. The *Nelson*, of Glasgow, 603 tons, 24 men. The *Carnatic*, of London, 632 tons, 32 men. Besides others of less burden.

From CANTON, the *Hindustan*, of London, 798 tons, 37 men. The *Castle Eden*, of London, 930 tons, 52 men. The *Royal Albert*, of Greenock, 507 tons, 17 men. The *U. Arne*, of Liverpool, 577 tons, 21 men. Besides other ships from 400 tons to 500 tons.

In the trade with Singapore, New South Wales, and other eastern places, the ships vary in size from 250 tons to 600.

The ships employed in the trade between the ports of Liverpool, the Clyde, and the Mersey, and ports in the East Indies, China, and other eastern places, vary in their size from 300 tons to 700 registered tons.

The following summary of the cargoes discharged by some of the principal ships arriving from the *United States*, and from other parts of the world, in the ports of London and Liverpool, will be found curious and instructive.

The cargo discharged in February, 1845, at the St. Katherine's Dock, London, by the American ship *Victoria*, of 938 tons, 30 men, from New York, exhibits the variety of exports: viz., 4161 barrels of turpentine, 2300 barrels of oil-cake, 17 casks of oil, 66 tierces, 19 half-tierces, and 1 hog-head of tobacco, 2629 bushels of Indian corn, 174 tierces of beef, 70 barrels, 48 half-barrels of pork, 161 cases, 64 casks of cheese, 26 barrels of tallow, 161 cases, 64 casks of general merchandise, 20 barrels of sarsaparilla, 75 cases of cloths, 25 boxes of black weights, 1 case, 1 cask of specie, 30 boxes of broom corn, 30 boxes and 17 casks of broom handles, and 6 dozen brooms and whips.

The *Prince Albert*, of New York, 980 tons, 37 men, from New York, discharged a month previously in the port of London, 44 casks, 23 cases, 12 bales of general merchandise, 25,440 staves, 122 logs of cedar, 1050 casks of oil-cake, 303 casks of oil, 20 barrels of lard oil, 16 casks of spermaceti, 1492 barrels of turpentine, 30 barrels of spirits of turpentine, 79 pigs of lead, 1 case of worsted, 7 hog-heads of furs, 11 casks and 59 kegs of tobacco, 235 bales of hemp, 4901 bushels and four casks of Indian corn, 110 barrels of pork, 125 tierces of beef, 1054 cases, and 296 casks of cheese, 1 tierce of hams, 2 hog-heads of tallow, 10 kits of salmon, 1 cask of tongues, 5 hides, 3 boxes, and 1 barrel of bread.

The *Northumberland*, of New York, 990 tons, 32 men; discharged a cargo of nearly similar articles, with the addition of 197 bundles of whalebone.

The *Wellington*, the *Hendrick Hudson*, the *Westminster*, the *St. James*, the *Quebec*, the *Mediator*, the *Switzerland*, the *Gladiator*, the *Robert Fuller*, &c., discharged similar cargoes, and all these will comprehend a view of the imports from America into the port of London, if we add tobacco, and an occasional vessel from Boston, Charleston, and Baltimore. The outward cargoes consist chiefly of British manufactures.

Talisman, of Boston, discharged in London, 60,000 lbs. of oil-cake, 2 tons of horn tips, 3 cases of merchandise, 1 case of hoops, 39 bales of hemp, 6 barrels of isinglass, 23½ tons of oil, and 500 tons of ice.

The *Louisa*, of the United States, from Baltimore, 300 tons, 11 men, discharged 577 tierces of beef, 584 barrels and 164 tierces of pork, 9 casks of grease, 100 kegs of tongues, 51 casks of tallow, 1 barrel and 50 half barrels of suet, 227 tierces of beef, 100 barrels of pork, 21 hog-heads of quercitron bark, 3 tierces of bones, 14 tierces of

clover-seed, 13 tierces and 6 tons of sassafras root, 1 case of merchandise, 10 hogsheds of tobacco, 1 tierce of bees'-wax, and 30 kegs of butter.

Cargoes of timber from British America.—The *John and Mary*, of Quebec, from Quebec, 12 men, 286 tons; discharged 20 pieces of white, and 450 pieces of red pine, 400 deals, and 3922 staves.

The *Clyde*, of St. John's, from St. John's, New Brunswick, 20 men, 711 tons; discharged 288 pieces of pine and 139 pieces of birch timber, 13,737 deals, 5650 palings, 2600 pieces of lathwood, 3840 staves, 43 boards, and 4 fathoms firewood.

The *Junior*, of Quebec, from Quebec, 19 men, 677 tons; discharged 20 pieces of oak timber, 50 pieces of elm, 58 pieces of pine, 12,474 deals, and 8610 staves.

The *Great Britain*, of London, from Montreal, 20 men, 492 tons; discharged 3439 barrels of flour, 2179 staves, 75 pair of oars, 252 deals, 108 handspikes, 350 barrels of ashes, and 1 case of books.

The *Liverpool*, of Halifax, from St. John's, New Brunswick, 20 men, 536 tons; discharged 335 pieces of pine timber, 11,959 deals and ends, 7719 head staves, 3 cords of lathwood, and 3 barrels of furs and skins.

The following are a few of the cargoes which were discharged in London, from ships, which arrived from India, China, &c.

The *Queen*, of London, from Calcutta, 42 men, 1244 tons; discharged 1385 chests of indigo, 246 bales of raw silk, 122 chests and 4029 bags of sugar, 991 bags of salt-petre, 102 hogsheds of oil seed, 4600 packets of linseed, 2500 bundles of rattans, 53 cases of silk piece goods, 38 cases of silk corahs, 545 bags of rice, 2 butts and 1 pipe of returned wine, 22 tubs and 243 boxes of camphor, 5 cases of cheroots, 10 barrels of pepper, 10 cases of lac dye, and 6 cases of arrowroot.

The *Prince of Wales*, of London, from Calcutta, and the Cape of Good Hope, 84 men, 1244 tons; discharged 3762 bags of sugar, 191 bales of raw silk, 810 chests and 2 boxes of indigo, 110 cases of castor oil, 1378 bags of rice, 3300 bundles of rattans, 705 bundles of cherelta, 6 barrels of senna, 100 barrels of jute, 1250 packets of oil-seed, 1 box of cowries, 36 cases of piece goods, 100 puncheons of rum, 1778 bags of saltpetre, 1400 packets of cowries, 12 cases of sundries, 6 chests of tea, 25 butts and 20 pipes of wine, shipped in London for the voyage round the Cape of Good Hope, and 1 box of ostrich feathers.

The *Walmer Castle*, of London, from Canton, Hong-Kong, and Manilla, 48 men, 656 tons; discharged 3622 chests and 598 half chests of tea, 13,425 bags of sugar, and 26 tons of sapan wood.

The *Monarch*, of London, from Calcutta and St. Helena, 84 men, 1282 tons; discharged 3994 bags of sugar, 394 chests of indigo, 3020 bags of saltpetre, 635 bags of horn tips, 431 bales of raw silk, 1758 packets of linseed, 23 chests of lac dye, 19 cases of piece goods, 2 trusses of silk, 50 puncheons of rum, 100 bales of jute, and 90 bags of rice.

The *Universe*, of Dundee, from Bombay, 26 men, 719 tons; discharged 564 bags of coffee, 173 bundles and 432 bags of turmeric, 50 bales of coir yarn, 185 bags of senna leaves, 24 boxes of arrowroot, 14 boxes of gum dammar, 1 box of poppy, 3 boxes of shell-lac, 306 bags of pepper, 63 cases of oilbanum, 147 cases of gum arabic, 148 elephants teeth, 1 case of gum benjamin, 10 bags of croton seed, 90 cases of China indigo, 835 cases of camphor, 51 cases of raw camphor, 4 cases of shawls, 291 cases of 1 case shells, 22 cases of myrrh, 200 cases of annini, 6 cases of kino, 16 cases of cardamoms, 116 cases of cowries, 3 boxes of sea horse teeth, 4 bags of coculus indicus, 3655 bags of oil-seed, 421 cases of cassia, 814 bales of cotton, 36 kegs of aloes, 24 bags of safflower, 8 bags of linseed, 4 cases of nutmegs, 40 bags of gall nuts, 300 bags of pepper, 2 chests of corriots, 33 cases of China root, 41 bags of senna leaves, 3950 buffalo horns, 468 bags of cowries, 21 bundles of mats, 1 bundle of hides, 139 pieces of elephants' teeth, 2 cases of shells, 960 frazils and 16 half frazils of coffee, 4 cases of 1 half case of cinnamon oil, 572 bags of linseed, 21 cases of merchandise, 2 cases of sundries, 7 cases of mother-of-pearl shells, 10 cases of silks, 85 baskets of China root, 356 pieces of hollow ivory, 177 pieces and 509 cases of ivory, 13 pieces of ball ivory, 45 pieces, 14 bundle, and 799 elephants' teeth, 5 cases of retail goods, 3 cases of books, &c., and 50 robins of castor seed.

The *Nautilus*, of Liverpool, from Valparaiso, 12 men, 240 tons; discharged 262 quintals of regulus, 64 quintals of ratalia, 6050 quintals of copper ore, 149 bags of silver ore, 25 bales of wool, and 233 quintals of Brazil wood.

The *Vera*, of Dundee, from Valparaiso, 8 men, 186 tons; discharged 15 bars and 3 boxes of silver, 138 bales of wool, 50 bags of gum, 95 casks of oil, 291 bags of copper ore, 106 bags of copper regulus, 9 tons of Nicaragua wood, 23 tons of copper regulus, 41 casks of oil, and 1340 bags of silver ore.

The *Nightingale*, of Liverpool, from Pernambuco, 14 men, 263 tons; discharged 150 barrels of sugar, 24 bags of wax, 872 bags of cotton, 896 dry salted hides, 2 barrels of isinglass, 50 tons of Brazil wood, 2500 coker nuts, 59 bags of guano, 100 cases of sugar, 12 barrels and 210 bags of wax.

The *Pickwick*, of Liverpool, from Islay, 17 men, 386 tons; discharged 2 bales of wool, 419 bales of alpaca, 43 bales of llama, 39 bales of vicuna, 792 bales of sheep's and 36 bales of vicuna skins, 425 bars of tin, 5986 bags of cubic nitre, 21 dry hides, 100 sheep skins, 4 cases, contents unknown, and 214 bales of bark.

Many of the timber-carrying ships are during winter employed in the cotton trade with the United States. The *Liverpool* and *Glasgow* trade with India and China is carried on by ships of from 300 to 800 tons; with the *West Indies*, by vessels of from 180 to 500 tons; by *South America*, by vessels of from 150 to 300 and 400 tons; the size depending greatly on the depth of water in the ports in South America and the West Indies, to which vessels proceed with and for cargoes.

CHAPTER XXXII.

TARIFF AND CUSTOMS' LAW OF THE UNITED STATES, PASSED AT THE SECOND SESSIONS OF THE TWENTY-SEVENTH CONGRESS (1842).

SECTION I.—Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That from and after the passage of this act in lieu of the duties heretofore imposed by law on the articles hereafter mentioned, and on such as may now be exempt from duty, there shall be levied, collected, and paid, the following duties, that is to say:—

1st.—On coarse wool unmanufactured, the value whereof at the last port or place whence exported to the United States, shall be seven cents, or under per pound, there shall be levied a duty of five per centum *ad valorem*; and on all other unmanufactured wool, there shall be levied a duty of three cents per pound, and thirty per centum *ad valorem*: Provided, That when wool of different qualities of the same kind or sort, is imported in the same bale, bag, or package, and the aggregate value of the contents of the bale, bag, or package, shall be appraised by the appraisers, at a rate exceeding seven cents per pound, it shall be charged with a duty in conformity with such appraisal: Provided further, That when wool of different qualities, and different kinds or sorts, is imported in the same bale, bag, or package, the contents of the bale, bag, or package, shall be appraised at the value of the finest or most valuable kind or sort, and a duty charged thereon accordingly: Provided further, That if bales of different qualities are embraced in the same invoice, at the same price, the value of the whole shall be appraised according to the value of the bale of the best quality: Provided further, That if any wool be imported having in it dirt, or any material or impurities, other than those naturally belonging to the fleece, and thus be reduced in value to seven cents per pound or under, the appraisers shall appraise the said wool at such a price as, in their opinion, it would have cost had it not been mixed with such dirt or impurities, and a duty shall be charged thereon in conformity to such appraisal: Provided also, That wool imported on the skin shall be estimated as to weight and value as other wool.

SECTIONS II., V., VI., VIII., and IX., enumerate the various duties, payable on the several articles in the annexed table.

SECTION III.—And be it further enacted, That, from and after the passage of this act, there shall be levied, collected, and paid on the importation of the articles hereinafter mentioned, the following duties, that is to say:—

1st.—On all manufactures of silk not otherwise specified, except bolting cloths, two dollars and fifty cents per pound of sixteen ounces: on silk bolting cloths, twenty per centum *ad valorem*. Provided, That if any silk manufacture shall be mixed with gold or silver, or other metal, it shall pay a duty of thirty per centum *ad valorem*.

SECTION III., clause 2d.—On cotton bagging, four cents per square yard or any other manufacture not otherwise specified, suitable for the uses to which cotton bagging is applied, whether composed in whole or in part of hemp or flax, or any other material, or imported under the designation of gunny cloth, or any other appellation, and without regard to the weight or width, a duty of five cents per square yard.

SECTION IV.—And be it further enacted, That, from and after the passage of this act, there shall be levied, collected, and paid, on the importation of the articles hereinafter mentioned, the following duties, that is to say:—

1st.—On iron in bars or bolts, not manufactured in whole or in part by rolling, seventeen dollars per ton: on bar or bolt iron, made wholly or in part by rolling, twenty-five dollars per tonf. Provided, That all iron in slabs, blooms, loops, or other form, less finished than iron in bars or bolts, and more advanced than pig iron, except castings, shall be rated as iron in bars or bolt, and pay a duty accordingly. Provided also, That iron, imported prior to the 3rd day of March, 1843, in bars or otherwise, for railways and inclined planes, shall be entitled to the benefits of the provisions of existing laws, exempting it from the payment of duty on proof of its having been actually and permanently laid down for use on any railway or inclined plane prior to the 3rd day of March, 1843, and all such iron imported from and after the date aforesaid, shall be subject to pay the duty on rolled iron.

SECTION VII.—And be it further enacted, That, from and after the day and year aforesaid, there shall be levied, collected, and paid, on the importation of the articles hereinafter mentioned, the following rates of duty, that is to say:—

2nd.—On all books printed in the English language, or of which English forms the text,

when bound, thirty cents per pound, when in sheets or boards, twenty cents per pound. Provided, That whenever the importer shall prove, to the satisfaction of the collector, when the goods are entered, that any such book has been printed and published abroad more than one year, and not republished in this country, or has been printed and published abroad more than five years before such importation, then, and in such case, the said books shall be admitted at one-half of the above rate of duties. Provided, That the said terms of one year and five years, shall in no case commence, or be computed at and from a day before the passing of this act; on all books printed in Latin or Greek, or in which either language forms the text, when bound, fifteen cents per pound; when unbound, thirteen cents per pound; on all books printed in Hebrew, or of which that language forms the text, when bound, ten cents per pound, and when unbound, eight cents per pound. Provided, That all books printed in foreign languages, Latin, Greek, and Hebrew excepted, shall pay a duty of five cents per volume, when bound or in boards, and when in sheets or pamphlets, fifteen cents per pound; and editors of works in the Greek, Latin, Hebrew, or English languages, which have been printed forty years prior to the date of importation, shall pay a duty of five cents per volume; and all reports of legislative committees, appointed under foreign governments, shall pay a duty of five cents per volume; on polyglots, lexicons, and dictionaries, five cents per pound; on books of engravings or plates, with or without letterpress, whether bound or unbound, and on maps and charts, twenty per centum *ad valorem*.

SECTION X.—And be it further enacted, That on all articles not herein enumerated or provided for, there shall be levied, collected, and paid a duty of twenty per centum *ad valorem*.

SECTION XI.—And be it further enacted, That an addition of ten per centum shall be made to the several rates of duties by this act imposed, in respect to all goods, wares and merchandise, on the importation of which, in American or foreign vessels, a specific discrimination between them is not herein made, which, from and after the time when this act shall take effect and go into operation, shall be imported in ships or vessels not of the United States; and that a further addition of ten per centum shall be made to the several rates of duties imposed by this act on all goods, wares, and merchandise, which shall be imported from any port or place east of the Cape of Good Hope, in foreign vessels. Provided, That these additional duties shall not apply to goods, wares, or merchandise, which shall be imported after the day that this act goes into operation, in ships or vessels not of the United States, entitled by treaty or by any act or acts of Congress, to be entered in the ports of the United States, on the payment of the same duties as shall then be paid on goods, wares, or merchandise, imported in ships or vessels of the United States.

SECTION XII.—And be it further enacted, That on and after the day this act goes into operation, the duties on all imported goods, wares, or merchandise, shall be paid in cash. Provided, That in all cases of failure or neglect to pay the duties, on completion of the entry, the said goods, wares, or merchandise, shall be taken possession of by the collector, and deposited in the public stores, there to be kept with due and reasonable care, at the charge and risk of the owner, importer, consignee, or agent; and if any such goods remain in public store beyond sixty days (except in the case of goods imported from beyond the Cape of Good Hope, remaining for the space of ninety days) without payment of the duties thereon, then said goods, wares, and merchandise, or such quantities thereof as may be deemed necessary to discharge the duties, shall be appraised and sold by the collector, at public auction, on due public notice thereof being first given, in the manner and for the time prescribed by a general regulation of the Treasury department; and at said public sale, distinct printed catalogues, descriptive of said goods, with the appraised value affixed thereto, shall be distributed among the persons at said sale; and a reasonable opportunity shall be given, before such sale, to persons desirous of purchasing, to inspect the quality of such goods; and the proceeds of said sales, after deducting the usual rate of storage at the port in question, together with all other charges and expenses, including interest on the duties from the date of entry at the rate of six per centum per annum, shall be applied to the payment of duties; and any balance of money remaining, over and above the full amount of duties, charges, and expenses and interest aforesaid, as well as such quantities of any goods, wares, or merchandise as may not have been sold for the purposes before-mentioned, shall be delivered, and the money paid over by the collector to the owner, importer, consignee, or agent, and proper receipts taken for the same.

And provided, That if no claim be made by such owner, importer, consignee, or agent, for the portion of the goods which may remain in the hands of the collector, after such sale, the said goods shall be forthwith returned to the public stores, there to be kept at the risk and expense of the owner, importer, consignee, or agent, until claimed or sold for storage agreeably to law; and the proceeds of the sale for duties remaining unclaimed for the space of ten days after such sale, shall, after payment of duties and all expenses aforesaid, at the expiration of that period, be paid by the collector into the Treasury, in the manner provided for in the case of unclaimed goods in the next succeeding section of this act. And provided further, That when any goods are of a perishable nature, they shall be sold forthwith.

SECTION XIII.—And be it further enacted, That, previous to the sale of any unclaimed goods, the said collector shall procure an inventory and appraisement thereof to be made, and to be verified

on oath or affirmation, by two or more respectable merchants, before the said collector, and to remain with him; and said collector shall afterwards cause said goods to be advertised and sold, in the manner provided for in this act, and, after retaining the duties thereon, agreeably to inventory and appraisement, and interest and charges aforesaid, shall pay the overplus, if any there be, into the Treasury of the United States, there to remain for the use of the owner or owners, who shall upon the due proof of his, her, or their property, be entitled to receive the same; for which purpose the collector shall transmit, with the said overplus, a copy of the inventory, appraisement, and account of sales, specifying the marks, numbers, and descriptions of the packages sold, their contents, the name of the vessel and master in which and of the port or place whence they were imported, and the time when, and the name of the person or persons to whom said goods were consigned in the manifest; and the receipt or certificate of the collector shall exonerate the master or person having the charge or command of any ship or vessel in which said goods, wares, and merchandise were imported, from all claim of the owner or owners thereof: Provided, That so much of the fifty-sixth section of the general collection law of 2nd of March, 1799, which provides for the storage of unclaimed merchandise, as conflicts with the provision of this act, shall be and is hereby repealed: Provided also, That when goods are of a perishable nature, they shall be sold forthwith.

SECTION XIV.—And be it further enacted, That on and after the day this law goes into effect, there shall be allowed a drawback on foreign sugar refined in the United States, and exported therefrom, equal in amount to the duty paid on foreign sugar from which it shall be manufactured, to be ascertained under such regulations as shall be prescribed by the Secretary of the Treasury, and no more; and on spirits distilled from foreign molasses, a drawback of five cents per gallon, till the 1st day of January, 1843, when it shall be reduced one per cent per gallon; and annually, on the 1st day of January thereafter, the said drawback shall be reduced one cent per gallon, until the same shall be wholly discontinued: Provided, That this act shall not alter or repeal any law now in force regulating the exportation of sugar refined, or spirits distilled from molasses in the United States, except as to the rates of duties and drawbacks.

SECTION XV.—And be it further enacted, That in the case of all goods, wares, and merchandise, imported on and after the day this act goes into operation, and entitled to debenture under existing laws, no drawback of the duties shall be allowed on the same, unless said goods, wares, or merchandise, shall be exported from the United States within three years from date of importation of the same; nor shall the additional rate of duty levied by this act on goods, wares, and merchandise, imported in foreign vessels, be refunded in case of re-exportation: Provided, That two and one-half per centum, on the amount of all drawbacks allowed, except on foreign refined sugars, shall be retained, for the use of the United States, by the collectors paying such drawbacks respectively; and in the case of foreign refined sugars, ten per centum shall be so retained.

SECTION XVI.—And be it further enacted, That in all cases where there is or shall be imposed any *ad valorem* rate of duty on any goods, wares, or merchandise, imported into the United States, and in all cases where the duty imposed shall by law be regulated by, or directed to be estimated or based upon, the value of the square yard, or of any specified quantity or parcel of such goods, wares, or merchandise, it shall be the duty of the collector, within whose district the same shall be imported or entered, to cause the actual market value or wholesale price thereof, at the time when purchased, in the principal markets of the country from which the same shall have been imported into the United States, or of the yards, parcels, or quantities, as the case may be, to be appraised, estimated, and ascertained, and to such value or price, to be ascertained in the manner provided in this act, shall be added all costs and charges, except insurance, including in every case charges for commission at the usual rates, as the true value at the port where the same may be entered, upon which duties shall be assessed. And it shall, in every such case, be the duty of the appraisers of the United States, and every of them, and every person who shall act as such appraiser, or of the collector and naval officer, as the case may be, by all the reasonable ways and means in his or their power, to ascertain, estimate, and appraise the true and actual market value and wholesale price, any invoice or affidavit to the contrary notwithstanding, of the said goods, wares, and merchandise, at the time purchased, and in the principal markets of the country whence the same shall have been imported into the United States; and the number of such yards, parcels, or quantities, and such actual market value or wholesale price of every of them as the case may require; and all such goods, wares, or merchandise, being manufactured of wool, or whereof wool shall be a component part, which shall be imported into the United States in an unfinished condition, shall, in every such appraisal, be taken, deemed, and estimated to have been, at the time purchased, and place whence the same were imported into the United States, of as great value as if the same had been entirely finished: Provided, That in all cases where goods, wares, and merchandise, subject to *ad valorem* duty, or on which the duties are to be levied upon on the value of the square yard, and in all cases where any specific quantity or parcel of such goods, wares, and merchandise, shall have been imported into the United States from a country in which the same have not been manufactured or produced, the foreign value shall be appraised and estimated according to the current

market value or wholesale price of similar articles at the principal markets of the country of production or manufacture, at the period of the exportation of said goods, wares, and merchandise, to the United States.

XVII.—And be it further enacted, That it shall be lawful for the appraisers, or the collector and naval officer, as the case may be, to call before them and examine, upon oath or affirmation, any owner, importer, consignee, or other person touching any matter or thing which they may deem material in ascertaining the true market value or wholesale price of any merchandise imported, and to require the production, on oath or affirmation, to the collector or to any permanent appraiser, of any letters, accounts, or invoices, in his possession, relating to the same, for which purpose they are hereby respectively authorised to administer oaths and affirmations; and if any person so called shall neglect or refuse to attend, or shall decline to answer, or shall, if required, refuse to answer in writing any interrogatories, and subscribe his name to his deposition, or to produce such papers, when so required, he shall forfeit and pay to the United States the sum of 100 dollars; and if such person be the owner, importer, or consignee, the appraisement which the said appraisers, or collector and naval officer, where there are no legal appraisers, may make of the goods, wares, and merchandise, shall be final and conclusive, any act to the contrary notwithstanding; and any person who shall wilfully and corruptly swear or affirm falsely on such examination, shall be deemed guilty of perjury; and if he be the owner, importer, or consignee, the merchandise shall be forfeited: and all testimony in writing or depositions taken by virtue of this section, shall be filed in the collector's office, and preserved for future use of reference, or be transmitted to the secretary of the Treasury, when he shall require the same: Provided, That if the importer, owner, agent, or consignee, of any such goods, shall be dissatisfied with the appraisement, and shall have complied with the foregoing requisitions, he may forthwith give notice to the collector, in writing, of such dissatisfaction: on the receipt of which, the collector shall select two discreet and experienced merchants, citizens of the United States, familiar with the character and value of the goods in question, to examine and appraise the same, agreeably to the foregoing provisions; and if they shall disagree, the collector shall decide between them: and the appraisement thus determined shall be final, and deemed and taken to be the true value of said goods, and the duties shall be levied thereon accordingly, any act of Congress to the contrary notwithstanding: Provided also, That in all cases where the actual value to be appraised, estimated, and ascertained as herein before stated, of any goods, wares, and merchandise, imported into the United States, and subject to any *ad valorem* duty, or whereon the duty is regulated by or directed to be imposed or levied on the value of the square yard, or other parcel or quantity thereof shall exceed by ten per centum or more the invoice value, then, in addition to the duty imposed by law on the same, there shall be levied and collected on the same goods, wares, and merchandise, fifty per centum of the duty imposed on the same, when fairly invoiced.

XVIII.—And be it further enacted, That the several collectors be, and they are hereby authorised, under such regulations as may be prescribed by the secretary of the Treasury, whenever they shall deem it necessary to protect and secure the revenue of the United States against frauds and under-valuation, and the same is practicable, to take the amount of duties chargeable on any article bearing an *ad valorem* rate of duty, in the article itself, according to the proportion or rate per centum of the duty on said article; and such goods, so taken, the collector shall cause to be sold at public auction, within twenty days from the time of taking the same, in the manner prescribed in this act, and place the proceeds arising from such sale in the Treasury of the United States: Provided, That the collector or appraiser shall not be allowed any fees or commission for taking and disposing of said goods, and paying the proceeds thereof into the Treasury, other than are now allowed by law.

XIX.—And be it further enacted, That if any person shall knowingly and wilfully, with intent to defraud the revenue of the United States, smuggle or clandestinely introduce into the United States, any goods, wares, or merchandise, subject to duty by law, and which should have been invoiced, without paying or accounting for the duty, or shall make out, or pass, or attempt to pass, through the Custom-house, any false, forged, or fraudulent invoice, every such person, his, her, or their aids and abettors, shall be deemed guilty of a misdemeanour, and on conviction thereof shall be fined in any sum not exceeding 5000 dollars, or imprisoned for any term of time not exceeding two years, or both, at the discretion of the court.

XX.—And be it further enacted, That there shall be levied, collected, and paid, on each and every non-enumerated article which bears a similitude, either in material, quality, texture, or the use to which it may be applied, to any enumerated article chargeable with duty, the same rate of duty which is levied and charged on the enumerated article which it most resembles, in any of the particulars before-mentioned; and if any non-enumerated article equally resembles two or more enumerated articles, on which different rates of duty are chargeable, there shall be levied, collected, and paid, on such non-enumerated article, the same rate of duty as is chargeable on the article which it resembles paying the highest duty; and on all articles manufactured from two or more

materials, the duty shall be assessed at the highest rates at which any of its component parts may be chargeable.

XXI.—And be it further enacted, That the collector shall designate on the invoice, at least one package of every invoice, and one package at least of every ten packages of goods, wares, or merchandise, and a greater number should be or either of the appraisers deem it necessary, imported into such port, to be opened, examined, and appraised, and shall order the package or packages so designated to the public stores for examination; and if any package be found by the appraisers to contain any article not specified in the invoice, and they, or a majority of them, shall be of opinion that such article was omitted in the invoice with fraudulent intent on the part of the shipper, owner, or agent, the contents of the entire package in which the article may be shall be forfeited; but if said appraisers shall be of opinion that no such fraudulent intent existed, then the value of such article shall be added to the entry, and the duties thereon paid accordingly, and the same shall be delivered to the importer, agent, or consignee: Provided, That such forfeiture may be remitted by the secretary of the Treasury, on the production of evidence, satisfactory to him, that no fraud was intended: Provided further, That if, on the opening of the package or packages of goods, a deficiency of any article shall be found, on examination of the appraisers, the same shall be certified to the collector on the invoice, and an allowance be made in estimating the duties.

XXII.—And be it further enacted, That where goods, wares, and merchandise, shall be entered at ports where there are no appraisers, the mode hereinbefore prescribed of ascertaining the foreign value thereof shall be carefully observed by the revenue officers, to whom is committed the estimating and collection of duties.

XXIII.—And be it further enacted, That it shall be the duty of the secretary of the Treasury, from time to time, to establish such rules and regulations, not inconsistent with the laws of the United States, to secure a just, faithful, and impartial appraisal of all goods, wares, and merchandise, as aforesaid, imported into the United States, and just and proper entries of such actual market value, or wholesale prices thereof, and of the square yards, parcels, or other quantities, as the case may require, and of such actual market value wholesale price of every of them.

XXIV.—And be it further enacted, That it shall be the duty of all collectors, and other officers of the customs, to execute and carry into effect all instructions of the secretary of the Treasury relative to the execution of the revenue laws; and in case any difficulty shall arise as to the true construction or meaning of any part of such revenue laws; and in case any difficulty shall arise as to the true construction or meaning of any part of such revenue laws, the decision of the secretary of the Treasury shall be conclusive and binding upon all such collectors and other officers of the customs.

XXV.—And be it further enacted, That nothing in this act contained shall apply to goods shipped in any vessel bound to any port of the United States, actually having left her last port of lading eastward of the Cape of Good Hope or beyond Cape Horn, prior to the 1st day of September, 1842: and all legal provisions and regulations existing immediately before the 30th day of June, 1842, shall be applied to importations which may be made in vessels which have left such last port of lading eastward of the Cape of Good Hope or Cape Horn, prior to said 1st day of September, 1842.

XXVI.—And be it further enacted, That laws existing on the 1st day of June, 1842, shall extend to and be in force for the collection of the duties imposed by this act, on goods, wares, and merchandise, imported into the United States, and for the recovery, collection, distribution, and remission of all fines, penalties, and forfeitures, and for the allowance of the drawbacks by this act authorised, as fully and effectually as if every regulation, restriction, penalty, forfeiture, provision, clause, matter, and thing, in the said laws contained, had been inserted in and re-enacted by this act. And that all provisions of any former law inconsistent with this act, shall be, and the same are hereby repealed.

XXVII.—And be it further enacted, That it shall be the duty of the secretary of the Treasury, annually, to ascertain whether, for the year ending on the 30th of June next preceeding, the duty on any articles has exceeded thirty-five per centum *ad valorem* on the average wholesale market value of such articles, in the several ports of the United States for the preceeding year; and, if so, he shall report a tabular statement of such articles and excess of duty to Congress at the commencement of the next annual session thereof, with such observations and recommendations as he may deem necessary for the improvement of the revenue.

XXVIII.—And be it further enacted, That the importation of all indecent and obscene prints, paintings, lithographs, engravings, and transparencies, is hereby prohibited; and no invoice of packages whatever, or any part thereof, shall be admitted to entry, in which any such articles are contained; and all invoices and packages, whereof any such article shall compose a part, are hereby declared to be liable to be proceeded against, seized and forfeited, by due course of law, and the said articles shall be forthwith destroyed.

XXIX.—And be it further enacted, That wherever the word "ton" is used in this act, in re-

ference to weight, it shall be deemed and taken to be twenty hundred weight, each hundred weight being 112lbs, avoirdupois.

XXX.—And be it further enacted, That so long as the distribution of the net proceeds of the sales of the public lands, directed to be made among the several states, territories, and district of Columbia, by the act entitled “An Act to appropriate the Proceeds of the Sales of the Public Lands, and to grant pre-emption Rights,” shall be and remains suspended by virtue of this act, and of the proviso of the sixth section of the act aforesaid, the ten per centum of the said proceeds directed to be paid by the said act to the several states of Ohio, Indiana, Illinois, Alabama, Missouri, Mississippi, Louisiana, Arkansas, and Michigan, shall also be and remain suspended.

JOHN WHITE, Speaker of the House of Representatives.

WILLIE P. MANGUM, President of the Senate, *pro tempore*.

Approved August 30th, 1842.

JOHN TYLER.

TARIFF;

We subjoin the *CL-DEVAST* *TARIFF OF TEXAS*, which is admirable for its simplicity, but most *unsound* and *pernicious* in its high system of duties, being generally as high as that of the Tariff of the United States, which will now extend over Texas. As far as duties are in question, no one can regret the union of Texas with the great American republic.

IMPORT Duties as fixed by the Fifth Congress of Texas, and which took effect from and after the 1st of April, 1841.

Salt,	15 per cent ad valor	All articles not otherwise enumerated,	ditto.

AN ACT to authorise the Importation of Brandy in Casks of a capacity not less than Fifteen Gallons, and the Exportation of the same for the Benefit of a Drawback of the Duties.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act, brandy may be imported into

the United States in casks of a capacity not less than fifteen gallons, any thing in any law to the contrary notwithstanding: Provided, however, that all the provisions of existing laws, not inconsistent with this act, relating to the importation of foreign spirits, be complied with: And provided further, That all brandy imported in casks, of a capacity less than ninety gallons, shall be deposited, at the expense and risk of the importer, in such public or other warehouses, as shall be designated by the collector or surveyor for the port, where the same shall be landed; and shall be removed therefrom in the manner prescribed by an act entitled, "An Act providing for the Deposit of Wines and distilled Spirits in Public Warehouses, and for other Purposes."

II.—Be it further enacted, That brandy imported in casks of a capacity not less than fifteen gallons, may be exported for the benefit of a drawback of the duties which shall have been paid thereon; and the exporter or exporters of brandy so imported, shall be entitled to receive a debenture or debentures, for the amount of such drawback, agreeably to the existing laws; and all acts now in force, regulating the exportation of spirits, and the allowance and payment of drawbacks and debentures, shall be deemed applicable to brandy, the importation of which is permitted by this act. [Approved, 2nd of March, 1827.]

No goods, wares, or merchandise, subject to duty, can be imported into the United States, on the seaboard, in vessels of less than thirty tons' burden, under the penalty of the forfeiture of vessel and cargo; nor can a drawback of any duties be obtained on exportation except by sea; and in vessels of not less than thirty tons' burden—Act of the 2nd of March, 1799, Section XCII.

Drawback not allowed on goods exported to any place immediately adjoining the United States, except to places westward or southward of Louisiana, and to the north-west coast of America; nor in any case, when exported in a vessel of less than thirty tons' burden.—Act of the 2nd of March, 1799, Sections LXXV, and XCII; and Act of the 5th of January, 1805, Section II.

No refined lump or leaf sugar can be imported into the United States, except in ships or vessels of at least 120 tons' burden, and in packages containing at least 600 lbs., under the penalty of forfeiting the same, together with the ship or vessel.—Act of the 2nd of March, 1799, Section CIII.

To be entitled to drawback, the duties on the importation of the goods exported, must have been, at least, fifty dollars by one vessel, at the same time, and by the same person, and the merchandise be, at the time of exportation, in the same package, and same condition, including wrapper and original mark and number, as when imported.—Act of the 22nd of May, 1824.

DRAWBACK.

XIV.—And be it further enacted, That on and after the day this law goes into effect, there shall be allowed a drawback on foreign sugar refined in the United States, and exported therefrom, equal in amount to the duty paid on the foreign sugar from which it shall be manufactured, to be ascertained under such regulations as shall be prescribed by the secretary of the treasury, and no more, and on spirits distilled from foreign molasses a drawback of five cents per gallon, till the 1st day of January, 1843, when it shall be reduced one cent per gallon; and annually, on the 1st day of January thereafter, the said drawback shall be reduced one cent per gallon, until the same shall be wholly discontinued. Provided, That this act shall not alter or repeal any law now in force regulating the exportation of sugar refined or spirits distilled from molasses in the United States, except as to the rates of duties and drawbacks.

XV.—And be it further enacted, That in the case of all goods, wares, and merchandise, imported on and after the day this act goes into operation, and entitled to debenture under existing laws, no drawback of the duties shall be allowed on the same, unless said goods, wares, or merchandise, shall be exported from the United States within three years from the date of importation of the same, nor shall the additional rate of duty levied by this act on goods, wares, and merchandise, imported in foreign vessels, be refunded in cases of re-exportation: Provided, That two and one-half per centum on the amount of all drawbacks allowed, except on foreign refined sugars, shall be retained for the use of the United States, by the collectors paying such drawbacks respectively; and in the case of foreign refined sugars, ten per centum shall be so retained.—Act of the 30th of August, 1842.

No distilled spirits, except arrack, brandy in casks of not less capacity than fifteen gallons, and sweet cordial, can be imported in casks or vessels of less capacity than ninety gallons, wine measure; nor in casks which have been marked pursuant to any law of the United States, on pain of forfeiture of the same, together with the ship or vessel in which they were imported.—Act of the 2nd of March, 1799, Section CIII.

In all cases where there are more goods found on board a vessel than the master thereof has reported in his manifest, he shall, with the consent of the officers of the customs, make a post entry for the same, and pay two dollars therefore; and for every disagreement between his manifest and cargo, he is liable to a fine of 500 dollars.—Act of the 2nd of March, 1799, Section LVII.

Drawback is not allowed on the exportation of goods which shall have been imported in foreign vessels, from any of the dominions, colonies, or possessions of any foreign power, with which the

vessels of the United States are not permitted directly to trade.—Act of the 27th of April, 1816, Section IV.

No allowance of drawback on the exportation of iron cables, or parts thereof, butter, fish oil, playing cards, cordage if less than five tons, foreign dried and pickled fish, or other salted provisions, nor on sail duck if less than fifty bolts.—Act of the 14th of July, 1832.

Within twenty days after the clearance of a vessel, the exporter of goods by said vessel must swear to the export entry, and give a bond that they shall not be landed in any place or port within the limits of the United States, or forfeit the drawback.—Act of the 2nd of March, 1799. Extension of time to twenty days.—Act of the 1st of March, 1823.

Bounty is allowed on the exportation of pickled fish of the fisheries of the United States, cured and packed solely with foreign salt, on which the duty shall have been paid.—Act of the 2nd of March, 1799, Section LXXXIII.

All goods, on examination by the appraisers, not corresponding with the entry made of them, are liable to forfeiture.

The number of bushels of wheat is to be ascertained by actual measurement by the standard bushel, and not by weight.

REGISTER ACT.

Every owner of a vessel, residing within the limits of the United States, to swear (or affirm) to the register within ninety days after its being granted, or it becomes void, and the vessel and cargo pays foreign tonnage and duty.

For duty of appraisers, &c., see Section XVII., Act of the 30th of August, 1842, page 20.

Duties to be paid in cash.—See Section XII., Act of the 30th of August, 1842, page 18.

STATUTE LAWS RELATING TO VESSELS.

The laws relating to the registry of vessels, the transfer of vessels by bill of sale, the enrolling and licensing of vessels for the coasting trade and fisheries, and the bounties payable to vessels employed in the cod-fishery, are of immense importance to those engaged in mercantile pursuits,

but they are to be found only by an examination of the numerous statute laws of the United States, or in the voluminous digests of the same.

Registered Vessels.—Vessels built in the United States, and wholly owned by citizens thereof, vessels captured in war by such citizens, and condemned as prizes; vessels adjudged to be forfeited for breach of the laws of the United States being wholly owned by such citizens; and no others may be registered. No vessel is entitled to registry, or if registered, to the benefits thereof, if owned in whole, or in part, by any citizen usually residing in a foreign country, during such residence, unless he be a consul of the United States, or an agent for, and a partner in, some house of trade or copartnership, consisting of citizens of, and actually carrying on trade within, the United States.

A registered vessel which by sale becomes the property of a foreigner, shall not be entitled to a new register, notwithstanding she may afterwards become American property. No vessel is entitled to registry, or its benefits, owned by a non-resident naturalised citizen if residing for more than one year in the country from which he originated, or for more than two years in any foreign country, unless he be a consul, or other public agent of the United States.

A vessel shall be deemed to belong to the port at or near which the managing owner usually resides, and the name of the vessel, and of the place to which she belongs, shall be painted on her stern, on a black ground, with white letters of not less than three inches in length. The certificate of the master, carpenter under whose direction the vessel is built, must be produced, prior to registry; which certificate is sufficient to remove a new vessel from one district to another in the same or an adjoining state, where the owner actually resides, provided it be with ballast only.

In order to the registry of a vessel, the owner, or one of the owners, must make oath to the property of the vessel, her name, burden, time when and place where she was built; and that there is no foreigner interested, directly or indirectly, in such vessel, or the profits thereof; and that the master is a citizen of the United States. The oath required to be taken by the owner, respects only the legal ownership of the property; and does not require a disclosure of any equitable interests vested in citizens of the United States, but only a denial that any subject or citizen of any foreign prince or state is directly or indirectly interested in the ship, or in the profits thereof. An agent or attorney may make oath, as agent, in case of registry, where the owner is fifty miles distant from the district to which, by virtue of purchase, the vessel should belong.

Steamboats may be registered or licensed in the name of the president or secretary of an incorporated company, without designating the names of the persons composing the company; but no part of such vessel can be owned by any foreigner. Vessels employed wholly in the whale fishery, owned by an incorporated company, may be registered as above, so long as they shall be wholly employed therein.

The issuing of certificates of record applies only to vessels built either by or for foreigners in the United States, and does not extend to vessels which, having been registered, are sold to a foreigner.

Any vessel entitled to registry, being in a port other than the one at which the owner usually resides, may be registered at the place where she may be at the time. And the oath required may be taken before the collector of the place to which the vessel belongs, or before the collector of the place in which she may be. When such vessel shall arrive within the district to which she belongs, the register so obtained shall be delivered up to be cancelled, and a permanent register granted in lieu thereof.

When a registered vessel is transferred to a foreigner, such transfer shall be made known by delivering up to a collector of a district, the certificate of registry, within seven days after such transfer of property; and if the transfer shall take place when the vessel is at a foreign port, or at sea, the master of the vessel shall within eight days after his arrival in any port of the United States, deliver up the register to the collector of such district. It is the practice not to destroy the register after it is cancelled; it is deposited in the register's office, and a duly certified copy is legal evidence.

If a master of a registered vessel be changed, the name of the new master is endorsed upon the register, upon his making oath that he is a citizen of the United States. If any certificate of registry or record shall be fraudulently or knowingly used, for any vessel not then actually entitled to the benefits thereof, she, with her tackle, &c. shall be forfeited to the United States. An enrolled or licensed vessel about to proceed on a foreign voyage, must surrender her enrolment and licence, and be duly registered, or she, together with the goods imported therein, will be liable to seizure and forfeiture. In case of the loss of a register, the master of the vessel may take oath to the fact, and obtain a new one.

Of the Transfer of Vessels.—When any registered vessel shall, in whole or in part be transferred to a citizen, or altered in form or burden, by being lengthened or built upon, or from one denomination to another by the mode of rigging, she shall be registered anew, or cease to be deemed a vessel of the United States.

If a registered vessel shall be sold in part to resident citizens of the United States, while at sea, without a bill of sale reciting the register, and without being then registered anew, she is not

liable with her cargo for higher duties than are payable by vessels of the United States. By the general maritime law, a bill of sale is necessary to pass the title of the ship. The inaccurate recital of the certificate of registry in the bill of sale, does not avoid the sale, but the vessel is thereby deprived of her American privileges. If a sea vessel be assigned to a foreigner, the effect is the same; but if it be a coaster, the sale is not thereby invalidated, but the vessel is subject to forfeiture. A regular bill of sale of a vessel at sea, will transfer the property. And, in general, where there can be no manual delivery, there should be a delivery of something as an *inducement* or token. A bill of sale is the proper title to which the maritime courts look, it is the universal instrument of transfer of vessels; it is made absolutely necessary by statute.

Enrolled Vessels.—Enrolled vessels are those over twenty tons' burden, employed in the coasting trade and fisheries; and are licensed annually for the employment or business authorised by the tenour of the licence. Vessels enrolled and licensed, bound on a foreign voyage, may be registered; and enrolled vessels, being in a port other than the one to which she belongs, on the expiration of the licence, may obtain temporary registry. Vessels under twenty tons' burden may be licensed for the coasting trade or fisheries. A vessel licensed for any employment, may surrender it at any time within the period for which it was issued.

All licences must be renewed within three days after the expiration thereof, if the vessel be within the district to which she belongs; if on a voyage at the time of expiration, within three days after her first arrival; if sold, in whole, or in part, the licence is vacated. Should a licence be lost or destroyed, a new one may be obtained, on the oath of the master to the loss, &c. On a transfer of an enrolled vessel, a new enrolment must be obtained, the requisites for obtaining which are similar to those for registered vessels.

Coasting Trade.—The United States is divided into three great districts: the first, between the eastern limits of the United States and the southern limits of Georgia; the second, to include all districts, &c., between the river Perdido and the western limits of the United States; and the third, all the ports, &c., between the southern limits of Georgia and the river Perdido.

Every vessel destined from a district in one state to a district in the same, or an adjoining state, with foreign merchandise in packages as imported, the value of which exceeds 400 dollars, or with foreign goods in original packages or otherwise, the aggregate value of which exceeds 800 dollars, must obtain a clearance. On the arrival of every such vessel at the port of destination, the master must enter the vessel and obtain a permit to unlade his cargo.

Vessels sailing with a coasting licence, laden with goods wholly of the produce or manufacture of the United States, are not required to clear, if bound from one to another port within either of the three great districts.

All registered vessels engaged in the coasting trade, are required to clear in going from one district to any other district, and also on their arrival in the other district to enter under similar regulations to those vessels under a licence. Since the act of 1828, chap. 109, the mackerel fishery cannot be lawfully carried on under a licence for the cod fishery.

The 32nd section of the act of February 18, 1793, forfeits a vessel licensed for the fisheries, if engaged in a business, of whatever nature, and with whatever object, which is not expressly authorised by the tenour of the licence. But vessels licensed for the mackerel fishery are not liable to the forfeiture imposed by the 5th and 32nd sections of the act of February 18, 1793, in consequence of any such vessel whilst so licensed having been engaged in catching cod or other fish.—But the owner of such vessel may not receive the bounty allowed to vessels in the cod fishery. A vessel to be entitled to the bounty must be actually employed at sea, in the cod fisheries, a certain specified time, and must dry cure the fish caught.

Fishing Bounties.—The fishing season is accounted from the last day of February to the last day of November; and the following allowances are paid on the last day of December, annually, to the owner or his agent, of each vessel that shall be duly licensed and qualified for the cod fisheries, and that shall have been employed four months of the fishing season, viz.: To every vessel of more than five tons and not exceeding thirty tons' burden, three dollars fifty cents per ton; above thirty tons' burden, four dollars per ton; above thirty tons, with a crew of not less than ten persons, and employed three months and a half, three dollars and fifty cents per ton. The bounty on any one vessel cannot exceed 300 dollars. Vessels of more than five and less than twenty tons, must catch and land twelve quintals of fish per ton, during the season.

The skipper of each fishing vessel must make an agreement with every fisherman before proceeding on a voyage. By paying monthly wages in money in lieu of dividing the fish, or the proceeds of the fishing voyage, in the proportions provided for by law, the agreement is violated, and the bounty is forfeited. The oath of the master, at the time the vessel has been actually employed in the fisheries, is required by an act of July 29, 1813, sec. 6.

Fishing vessels wrecked may obtain the bounty in certain cases, by the act of 1821, chap. 152. Fishing vessels may obtain a licence to touch and trade at a foreign port, under the act of February 18, 1793.—But the mere proceeding to a foreign port, if within the customary range of a fishing voyage, is not proceeding on a foreign voyage, within the meaning of the act. The bounties granted

by law, are paid on such vessels only, the officers and three-fourths of the crew of which, shall be proved citizens of the United States.

The laws relating to the enrolling and licensing of vessels, as well as those relating to the registering and recording of them, require, that when a vessel is sold and transferred, in whole, or in part, her papers shall be given up to be cancelled, and that she shall be papered anew; that when a vessel employed in the coasting trade, cod fishery, or mackerel fishery, is at a port other than the one to which she belongs, whose licence has expired, she is required to surrender the enrolment and licence, a "temporary register," to enable the vessel to return to the port of ownership, even should that port be in an adjoining district, there again to be enrolled and licensed, in every particular as before the temporary register was granted; and when an enrolled vessel is at a port other than the one to which she belongs, and is destined for a foreign port, she is required to surrender all her papers, and procure a register, for the foreign voyage; and upon her return to the port where she is owned, she is again subject to the requirements of the enrolment and licence acts. This series of changes may be entirely obviated, and the whole business of registering, recording, and licensing vessels arranged in a simple and concise manner, by the enactment of a law authorising all vessels to be registered permanently, whether engaged in foreign trade, coasting, or fisheries, according to the form now in use for vessels bound on a foreign voyage. The several parts or proportions owned by each individual, ought also to be expressed in the register; and when a partial transfer of property is made, it should be endorsed on the register and the record; and when there is an hypothecation, by bottomry or otherwise, it should be recorded, to be valid; and thus make the register the real evidence of ownership. According to the present system, volumes of records are required to be kept, at great labour and expense, in consequence of the frequent and partial changes of property in vessels, and their changes of employment.

After a vessel is permanently registered, and is to be employed in the coasting trade or fisheries, a licence should be given for that particular employment, to be renewed annually; and when a vessel is taken from either of those employments, to be put into foreign trade, the licence should be surrendered, and a clearance granted to proceed on the voyage, under the original permanent document.

Copies of all registers and enrolments issued by the existing laws, must be transmitted to the register of the treasury, and a duplicate of each made for the records of the custom-house. Consequently, when a vessel is registered, enrolled, and licensed, and again registered, as often happens within a year, triplicate copies at each change are rendered necessary. By the mode suggested, the labour at the custom-houses would be greatly reduced; the records would at all times show the real *bona fide* ownership of vessels; and the mercantile community would be relieved of the onerous requirements imposed by every partial transfer of their property in vessels, and also those incident to their frequent changes of employment.

The acts upon which the existing system is based, are those of December 31, 1792; February 18, 1793; March 2, June 27, 1797; March 2, 1803; March 27, 1808; March 3, 1825; and February 11, 1830.

The following circular instructions to collectors of the customs, dated Treasury Department, April 10, 1845, are explanatory of the act of Congress, approved March 3, 1845.

Herewith you will receive an act entitled "An act allowing drawback upon foreign merchandise exported in the original packages to Chihuahua and Santa Fe, in Mexico, and to the British North American provinces adjoining the United States," approved the 3rd of March, 1845, accompanied with forms and instructions for carrying the same into execution.

The first six sections of the act apply to the exportation of merchandise "in the original packages as imported," to Chihuahua, in Mexico, or Santa Fe, in New Mexico, either by the route of the Arkansas river, through Van Buren, or by the route of Red river, through Fulton, or by the route of the Missouri river, through Independence. Consequently, foreign imported merchandise exported or conveyed to the places in Mexico or New Mexico, mentioned, by any other routes than those indicated in the act, will not be entitled to a drawback of the import duties. It is also to be remarked, that the exportation of merchandise by the routes and to the places before mentioned, can only be made from the original port of importation.

In pursuance of the authority vested in the secretary of the treasury, by the 11th section of the act, the following rules, regulations, and forms, are presented, and are to be strictly enforced.

First. — In regard to the exportation of merchandise to Chihuahua and Santa Fe: —

On first giving twenty-four hours' notice at the custom-house, of intention to export, the exporter must make due entry, and for that purpose must produce the invoice required by the 2nd section of the act. Said entry must recite the invoice in detail; and, in addition, give a particular description of the merchandise, whence and by whom imported, the name of the vessel, and the time of importation, with the original invoice value of the goods, and also state the destination.

and the route by which the merchandise is to be transported. The entry must, in all cases, be verified by the oath or affirmation of the person making the same, together with the oath or affirmation of the first importer, with that of any person through whose hands the merchandise may have passed, declaring the same to be in the original package or packages, and that the duties have been paid or secured. Inspection of the packages should also be carefully made by a proper officer of the customs, at the time of making the entry. The bond required by the fifth section of the act must be given by the exporter.

In consideration of the large inland transportation, and the consequent risk of injury, and defacing the marks on the packages, thereby rendering it difficult to identify them, it is deemed proper, for the more effectual security of the revenue, to require that each package shall be enclosed in a strong wooden box or covering, on which the same marks and numbers are to be placed as those on the inner package. The inner package is to be secured with a strong cord or rope, with the custom-house seal attached.

Forms of entry, invoice certificates, and oaths, are herewith transmitted, marked from A to D, inclusive.

Secondly.—The remaining sections of the act apply to the exportation of merchandise for benefit of drawback to the British North American provinces adjoining the United States, and enumerating certain ports, "declared ports from which foreign goods, wares, and merchandise, on which the import duty has been paid, or secured to be paid, may be exported to ports in the adjoining British provinces, and to which ports foreign goods, wares, and merchandise, may be transported, inland or by water, from the port of original importation, under existing provisions of law, to be thence exported for the benefit of drawback."

The course to be pursued in the transportation, inland, of foreign merchandise, in the original packages as imported, to the designated ports of exportation enumerated in the 7th section of the act, is to be similar to that prescribed in the 79th section of the general collection act of the 2nd of March, 1799; and all the legal requirements and forms of law must be strictly pursued, in cases arising under this act.

In the exportation by sea to ports in the adjoining British provinces, all the existing requisitions of law, regulating the exportation of merchandise to foreign ports, for the benefit of drawback, must be fully complied with.

On the arrival of merchandise transported inland, at either of the enumerated ports of exportation, a strict and thorough examination of the same must be made by an officer of the customs, to see that the goods are identical with those described in the accompanying transportation certificate, granted by the collector of the port from whence they may have been originally transported.

In the event of any detention of the merchandise, at the port of exportation, for any cause, said merchandise must be deposited either in the custom-house, or in some secure store-house, to be selected by the collector, the keys of which must be lodged in his hands. Any expense for storage must be defrayed by the owner or consignee of the goods. Before exporting the goods to their destined port in the adjoining British provinces, entry must be made according to the forms herewith marked E and F.

On the return of the manifest with the certificate thereon, in due form, to the collector of the port of exportation, it must be immediately transmitted to the collector of the district and port from whence the goods were originally transported, in order that the drawback of the duties may be duly paid by the collector of said port.

It is to be specially noted, that the law contemplating the probable retention of the original manifest at the foreign custom-house, requires a duplicate, or certified copy of the same, to be granted at the time of exportation, on which is to be endorsed the certificate of the foreign collector, and also the oath or affirmation of the master.

CANADA CUSTOM-HOUSE DUTIES CIRCULAR.

The following circular, dated "Inspector-general's Office, Montreal, April 7, 1845," addressed to the collectors of customs at the different ports in that province, and signed Joseph Carey, deputy inspector-general, refers to the act of Congress allowing drawback on goods exported to the territories adjoining the United States.

Sir.—With reference to a recent act of the Congress of the United States, allowing drawback on merchandise exported to the British provinces in North America, which, no doubt, has come under your notice, I have the honour to remind you that articles so exported from the United States, into this province, will be liable to the payment of the duties imposed by the acts of the provincial legislature, and also to the duties under the imperial act 5 and 6 Victoria, cap. 49, whe-

ther such goods are originally the growth, production, or manufacture of the United Kingdom, or of any of the British possessions in America, &c., or otherwise.

On this point, your attention is requested to the 27th section of the imperial act 3 and 4 William IV., cap. 59, which enacts "that no goods shall, upon importation into any of the British possessions in America, be deemed to be of the growth, production, or manufacture of the United Kingdom, or of any British possessions in America, unless imported from the United Kingdom, or from some British possessions in America." Consequently, all articles imported into this province, from or through the United States, are deemed foreign, although any of such articles may be the growth, production, or manufacture of the United Kingdom; which, when so imported, must be held to be liable to duty as foreign goods; that is, to the duties in full imposed both by the acts of the imperial parliament, and of the provincial legislature, imposing duties of customs, now in force, viz: Imperial Act 5 and 6 Victoria, cap. 49, and Provincial Act 8 Victoria, cap. 3, and 6 Victoria, cap. 31, the one in addition to the other."

CHAPTER XXXIII.

LIFE, FIRE, AND MARINE ASSURANCES, IN THE UNITED STATES.

We have given tabular statements of assurance companies, and rates of assurances, under the heads of Boston and New York.

The practice of *underwriting* marine insurances, does not (as far as we have been enabled to ascertain), exist in the United States.

Life insurances may be divided into three classes. 1st. Common joint-stock companies, the *personal liability* of the members of which to pay over and above their shares in the joint-stock, depends in the United States upon the limitation allowed or imposed by the respective state legislatures. The first class merely engage to pay liabilities for policies, and then divide the annual profit or loss according to the amount of stock among the shareholders.

The second class are joint-stock companies with populous bodies, who instead of paying fixed sums at the termination of lives, first pay the stockholders an annual interest, and divide a portion of generally two-thirds of any balance of net profit among those who hold policies.

The third class is the mutual life insurance companies, formed much upon the same principles as in England. Each person assured receiving a share of the profits, and being liable for a share of the losses, and consequently a partner in the concern, or corporation.

The management of insurance companies in the United States, is intrusted usually, as in England, to a board of directors, with a president, vice-president, actuary, secretary, &c.

1st. The Massachusetts Life Insurance and Trust company, which is of the first or proprietary class, transacts its business under the following rules and regulations:—

"Every person desirous of making insurance on his own life, or upon the life of any other person, or who wishes to contract for reversionary payments on annuities, must

sign a declaration by himself or agent, according to a printed form to be furnished by the company, setting forth the age, occupation, place of birth, state of health, and other circumstances attending the life or lives insured, or the life upon the failure of which the reversionary payment of the annuity is to commence. The company may also require a certificate of the health of a person, from a physician of established reputation. An application for an annuity on a life, must state the age of the party to whom it is granted. Any misrepresentation in these declarations, vitiates the contracts.

"Policies of insurance and reversionary contracts are void, if the person whose life is insured shall die upon the seas, or upon any of the great lakes, or shall, without the consent of the company, previously obtained and endorsed upon his policy, pass beyond the settled limits of the United States, excepting into the settled limits of the British provinces of the two Canadas, Nova Scotia, or New Brunswick; or shall, without any such previous consent thus endorsed, visit those parts of the United States which lie south of the southern boundaries of the state of Virginia and Kentucky; or shall, without such previous consent thus endorsed, enter into any military or naval service whatsoever, the militia not in actual service excepted; or in case he shall die by his own hands in, or in consequence of, a duel, or by the hands of justice, or in the known violation of any law of these states, or of the United States, or of the said provinces." This last provision is rather vague. "A person must have an interest in the life he insures, if it be not his own life. No policy takes effect until the first premium shall be paid, and the annual premiums must be paid the day they fall due, otherwise the policy expires; but it may be revived at any time within fifteen days, the person on whose life the assurance was made, being then alive and in good health, by the payment of said premium, together with an additional sum of ten per cent upon such premium. All claims will be settled within sixty days after notice, and satisfactory proof of the claim shall be made. Annuities must be demanded by the annuitant in person, or satisfactory proof must be given that the annuitant is still alive. A charge of one dollar is made for each policy of a common form; but where a special contract is required, the expense of drafting it must be borne by the assured. The company reserves to itself the right of making any alterations, which the particular circumstances of applicants may, in their opinion, render expedient. Insurances for one year may, or may not, be renewed at the pleasure of the company." Their refusal may be obviated by insurance of seven years, or for life.

ANNUITIES.—"The company will grant annuities during the continuance of any given life or lives, and make the payments either quarterly, half yearly, or annually, as shall be agreed upon. The payments may commence immediately, or be deferred for any given time. There are two methods of making these contracts, upon principles which differ essentially from each other. In the one, a moderate rate of interest is allowed upon the capital paid (either in money or stock) for the annuity, and, at the expiration of the life, the whole of that capital is paid back (within sixty days from its falling in, and in the stock or property at fair valuation that the company has then on hand; the same is done in an endowment in trust) to the heirs of the annuitant, or to any person legally authorised to receive it. This contract may, for the sake of distinction, be called an annuity in trust." (It is a sort of savings' bank; the smallest sum so received is 500 dollars, and for any sum less than 2000 dollars, the interest is payable only annually; over that, they may purchase it in semi-annual or quarterly payments.) "In the other case, a large interest is allowed during the life of the party, and, at his death, the capital becomes the property of the company. A contract of this kind, is generally called an annuity on a life.

"In the preceding proposals, the company," say they, "have offered as favourable terms to the applicants as they could, consistently with the safety of the property intrusted to their care, which object has been constantly kept in view." (In trusts, they charge for management one-half of one per cent per annum, only.) "The annual return made to the governor and council, which, without expressing the particular sums deposited by individuals, will contain a schedule of the amount of capital stock and all the property in possession of the company, with the manner of its investment, will always be open to the inspection of any person transacting business with the company." The legislature direct the kind of property, in general, in which investments shall be made by the company; which is to consist in United States funded debt, or Massachusetts

State stock, the stocks of incorporated banks in that commonwealth, ground rents or mortgages, and notes secured by mortgages. The above are, generally, the regulations of all our American life offices.

2nd. The *Grand Life Assurance, Annuity, and Trust Company of Philadelphia*, which is of the *second*, mixed class, has similar rules and regulations, and profess to make insurance on the life of "a healthy person not engaged in any hazardous occupation, and residing within the settled limits of the United States, north of the southern boundary of Virginia and Kentucky, or within the settled limits of the two Canadas, Nova Scotia, or New Brunswick." They state that it is their object to offer to the public the following advantages:—

1. Assurers for life to participate in the income.
2. A moderate sale of premiums.
3. Increased facilities for effecting assurances.
4. An ample capital, this being a mixed company, and, in 1837, the only one in the United States of that kind, paid in for the security of the assured.
5. Prompt settlement of claims; without dispute or litigation.
6. Repurchase of policies, in certain cases.
7. Payments of premiums, received either in the whole sum, or in smaller weekly or monthly amounts.
8. The reception and management of trusts.

"The improvements which experience has introduced into the business of life insurance and trusts in England, will be adopted by the company. The income of the company will be apportioned between the stockholders and the assured for life." It does not mention the rates, but we presume the usual English apportionment of one-third to the former, and two-thirds of the net profits to the latter.

"The rates of insurance, annuities, and endowments, will be as low as the most modern experience will warrant, with a due regard to the safety of the insured."

The legislature of Pennsylvania insisted "That the whole capital of this company to be paid in within two years from the date of its incorporation, and has authorised investigations by the courts into the state of its affairs; affording, if properly carried out, the most ample security to all who do business with the office. The managers, for the still greater security of all interested, have, for the present, limited the amount of policies to be granted in each case. No person can be elected a manager who is not himself assured to a specified amount; nor can a person be a manager, unless he be a holder, in his own right, of at least one hundred shares of stock. No manager can borrow money of the company; which, in these days of logrolling and money nepotism in this republic, will perhaps be considered a transcendent item of security and safety. The company pays one-fifth the amount insured immediately, on satisfactory proof of the death of the assured; and the remainder of the claim within the period of sixty days."

Their charter authorises them to receive and manage estates and trusts of every description, that may be committed to their charge, whether by courts of justice, individuals, or corporate bodies. They are authorised to become guardians of the estates of minors and lunatics, and trustees under wills. From the moment a trust is accepted, the company becomes responsible for the safety of it, and the whole capital of the company is pledged for its repayment, with the proceeds or interest that may have been stipulated; and the by-laws and regulations of the managers are framed with a view to enforce that security. They also receive money in small or large sums in deposit, to remain one, three, six, or twelve months, or for a longer period, and subject to withdrawal at a short notice, on which interest will be paid; thus becoming a savings-bank, as well as a bank of deposit. In the reception and execution of these various trusts, the company say they, having due regard to the security of the institution and the safe investment of its funds, will make the most liberal arrangements, as to the allowance of interest and charge of commissions, that the circumstances of each particular case may warrant.

3rd. The *Mutual Life Insurance Company of New York*, was incorporated the 12th of April, 1842. "Expecting to go into operation by the 1st of January, 1843, when the amount of 1,000,000 dollars will be applied to be insured, they having, at this period, the sum of between 700,000 and 800,000 dollars already entered on their books

in the short space of eight months. The act makes those asking for it, and all other persons who may hereafter associate with them, in the manner hereinafter prescribed, a body politic and corporate, by the name of the Mutual Life Insurance Company of New York. In addition to the general powers and privileges of corporations, as the same are declared by the third title of the eighteenth chapter of the first part of the revised statutes, the corporation thereby enacted shall have the power to ensure their respective lives, and to make all and every insurance appertaining to, or connected with, life risks, and to grant and purchase annuities. All persons who shall hereafter insure with the said corporation, and also their heirs, executors, administrators, and assigns, continuing to be insured in said corporation, as hereinafter provided, shall thereby become members thereof during the period they shall remain insured by said corporation, and no longer. The board of trustees shall consist of thirty-six persons. They shall, at their first meeting, divide themselves by lot into four classes, of nine each; the terms of each expiring successively, in one, two, three, and four years, so as always to have experienced men. They are re-eligible. The seats of these classes shall be supplied by the members of this corporation by a plurality of votes; an insurance of 1000 dollars, at least, entitling a member to a vote.

"Every person who shall become a member of this corporation by effecting insurance therein, shall, the first time he effects insurance, and before he receives his policy, pay the rates that shall be fixed upon and determined by the trustees; and no premium so paid, shall be withdrawn from said company, except as hereinafter provided, but shall be liable to all the losses and expenses incurred by this company during the continuance of its charter. The whole of the premiums received for insurance by said corporation, except as provided for in the following sections, shall be invested in bond and mortgages, or unincumbered real estate within the state of New York; the real property to secure such investment of capital shall, in every case, be worth twice the amount loaned thereon. In order to avoid a great land monopoly, all real estates as shall not be necessary for the accommodation of the company in the convenient transaction of its business, shall be sold and disposed of within six years from the time they acquire a title to the same. A certain portion of the premiums, not to exceed one-half, may be invested in public stocks of the United States, or of this state, or of any incorporated city in this state—New York. Suits at law may be maintained by said corporation against any of its members, for any cause relating to the business of said corporation; also, suits at law may be prosecuted and maintained by any member against said corporation, for losses by death, if payment is withheld more than three months after the company is duly notified of such losses.

"The officers of said company, at the expiration of five years from the time that the first policy shall have been issued and bear date, and within thirty days hereafter, and during the first thirty days of every subsequent period of five years, shall cause a balance to be struck of the affairs of the company, in which they shall charge each member with a proportionate share of the losses and expenses of said company, according to the original amount of premium paid by him, but in no case to exceed the amount of the premium. Each member shall be credited with the amount of said premium, and also with an equal share of the profits of the said company, derived from investments and earnings in proportion to said amount; and in case of the death of any member of said company, the amount standing to his credit at the last preceding striking of balance as aforesaid, together with the proportion which shall be found to belong to him at the next subsequent striking of said balance, shall be paid over to his legal representatives or assigns, within three months after the said last-mentioned balance shall be struck. Any member of the company, who would be entitled to share in the profits, who shall have omitted to pay any premium, or any periodical payment due from him to the company, may be prohibited by the trustees from sharing in the profits of the company; and all such previous payments made by him, shall go to the benefit of the company. A provision is made for an ample public statement of the details of business, losses, profits, investments, &c. No policy shall be issued by said company until application shall be made for insurance, in the aggregate, for 500,000 dollars at least; and the trustees shall have the right to purchase, for the benefit of the company, all policies of insurance, or other obligations issued by the company."

This company thought fit to exceed even the security required by the act of incorporation, and did not go into operation until there were applications for 1,000,000 dollars of life insurance.

Chancellor Kent states :—

"The terms and conditions of the English policies are more relaxed now than formerly ; but this is not the case with the American policies on lives." Even the old law requirement of an interest in the life assured, which is in full force here, and fortified by the English act of 14 George III., is now hardly looked to in some offices in England, as appears from their printed proposals. The statutes of Massachusetts make no provisions for life insurance companies by title, unless in case there is any want of provisions in their charter, which ought to set out especially their powers and liabilities. The first section of chapter thirty-seven of Massachusetts Revised Statutes, headed, like the Code of France, with the broad title "Insurance Companies," has this enactment : "All insurance companies that have been, or shall hereafter be incorporated in this commonwealth, may exercise the powers, and be subject to the duties and liabilities contained in this chapter, so far as may be consistent with the provisions of their respective charters." Section fortieth of this thirty-seventh chapter, contains provisions concerning the exercise of foreign agencies for insurances, still under that broad title ; upon this we have cursorily remarked before. The above chapter refer to chapter forty-fourth, which contains general statutory provisions concerning corporations.

"April 1st, 1840.—The people of the State of New York, represented in Senate and Assembly did enact as follows :—Section 1st. It shall be lawful for any married woman, by herself and in her name, or in the name of any third person, with his assent, as her trustee, to cause to be insured, for her sole use, the life of her husband for any definite period, or for the term of his natural life ; and in case of her surviving her husband, the sum or not amount of the insurance becoming due and payable by the terms of the insurance, shall be payable to her, to and for her own use, free from the claims of the representatives of her husband, or of any of his creditors ; but such exemption shall not apply where the amount of premium annually paid shall exceed 300 dollars.

"Section 2nd. In case of the death of the wife before the decease of her husband, the amount of the insurance may be made payable, after her death, to her children for their use, and to their guardian, if under age."

"Most of the insurance offices in the United States propose that they, in similar language to the Massachusetts Hospital Life Insurance Company, will enter into various contracts, so as to accommodate persons in almost every age and situation in life. An insurance may be made for one year, for several years, or for the whole life. It may be made on one life, on two, or on more lives ; to commence immediately, or at a future day. They will grant annuities upon two or more lives, in all the various forms of which they are susceptible ; as, for example, on the joint continuance of the lives (that is, an annuity which is to cease when any one of the lives fails), on the longest of the lives, on one life after the death of another ; as, for a wife after the death of her husband, or a child after the death of his father."

BANK OF ENGLAND.

Quarterly average of the weekly liabilities and assets of the Bank of England, from the 10th of December, 1839, to the 3rd of March, 1840, both inclusive, published pursuant to acts 3 and 4 William IV., chap. 98.

LIABILITIES.		£	ASSETS.		£
Circulation	.	16,678,000	Securities	.	23,223,000
Deposits	.	7,896,000	Bullion	.	4,271,000
		<hr/> 24,574,000			<hr/> 27,494,000

This return shows an augmentation in the currency to some extent. Compared with

the last account there is an increase upon each item—on circulation, 167,000*l.* ; on deposits, 326,000*l.* ; on securities, 242,000*l.* ; and on bullion, 307,000*l.* The actual stock of bullion in the bank at this moment, is estimated to be about 4,500,000*l.*

INSURANCE COMPANIES WEST OF THE ALLEGHANY.

It appears, from an article in the *Merchants' Magazine*, that the first insurance company established in the west, was at Lexington, Kentucky, which went into operation about 1816, but ceased to exist in one or two years. The second was the old Cincinnati Insurance Company, established in 1818, which issued some fifty or sixty policies, and in one or two years closed up its concerns. The third was the old Louisville Marine Insurance Company, which was established in or about the year 1818, and issued two hundred policies or upwards, and some years afterwards wound up its affairs. The fourth is the Cincinnati Equitable Fire Insurance Company, established in 1825, and is now in operation, and conducted on the principles of *mutual* insurance. The fifth was the Ohio Insurance Company, established in 1827, at which period there was no local insurance company in the west, with the exception of the Equitable Fire Insurance Company referred to, the Fire and Marine Insurance being at this period confined to the eastern offices, and their agencies in the west. To those familiar with the history of that period, it will be recollected that for several months pending the establishment of the Ohio Insurance Company, it was exceedingly doubtful whether it could be put in operation, from the difficulty of disposing of a sufficient amount of the stock ; but having commenced its operations, its success was decided, and two years afterwards arose, in 1829, the Cincinnati Insurance Company.

These two companies had, by their charters, a capital of 250,000 dollars each. The same year, the Louisville Marine and Fire Insurance was organised, and went into operation, capital, 200,000 dollars. In 1830, three new offices were established in the west, viz.: the Louisville Mutual Fire Insurance Company, the Louisville Merchants' Insurance Company, and the Wabash Insurance Company, with an aggregate capital of 400,000 dollars. In 1831, two more were added, viz.: the Madison Insurance Company in Indiana, and the Missouri Insurance Company at St. Louis—aggregate capital, 200,000 dollars. In 1832, three more were added, viz.: the Fireman's Insurance Company at Cincinnati, the Lansingburgh Insurance Company, and the New Albany Insurance Company in Indiana—aggregate capital 400,000 dollars. In 1833, but one was added to the number, viz.: the Franklin Fire Insurance Company, at Frankfort, Kentucky—capital, 100,000 dollars. But in 1834, seven new offices were chartered at Warren, Dayton, and Cleveland, in Ohio ; at Maysville and at Louisville, in Kentucky ; and at Jeffersonville and Rising Sun, in Indiana—aggregate capital, 800,000 dollars. In 1835, nineteen additional offices were established, viz.: seventeen in Ohio, and two in Kentucky—aggregate capital 1,600,000 dollars. In 1836, fourteen more were chartered, viz.: eight in Ohio, three in Kentucky, two in Indiana, and one in Missouri—aggregate capital 1,800,000 dollars. In 1837, twenty-two more were chartered, viz.: two in Ohio, seven in Indiana, and thirteen in Missouri—aggregate capital, 4,000,000 dollars.

The foregoing enumeration, however, embraces only the offices chartered in the four western states of Ohio, Kentucky, Indiana, and Missouri. No office was established in Tennessee, Illinois, Western Pennsylvania, or Western Virginia, until 1832, since which, fifteen or twenty companies have been established in these states, with an aggregate estimated capital of 1,500,000 dollars. Mississippi and Louisiana have been omitted in the foregoing calculation, as our statistics do not furnish adequate data for the occasion, but we estimate the amount of capital in these two states at, perhaps, 300,000 dollars.

Thus, we perceive, that in 1826, twelve years since, there was no local insurance office in the western states, north of Natchez, except the Equitable Fire Insurance Company at Cincinnati ; that in 1833, seven years after, there were only twelve, with an aggregate capital of 1,800,000 dollars ; but that in the four succeeding years, to the spring of 1838, the number was increased to considerably more than one hundred, the whole wielding, in the aggregate, the immense capital of 15,000,000 dollars.

ASSURANCES AGAINST LOSSES BY FIRE.

The fire assurance or insurance companies in the city of New York are of two sorts: first, those that have a fixed capital determined by the legislature, and divided into a certain number of shares, which must be subscribed for and paid in, and secured according to the provisions of the charter. The number of directors is also fixed, from among whom one is selected to act as president. The directors are annually chosen by the stockholders for one year, and in case of death or resignation, others may be appointed as may be provided for by the by-laws. A company is not allowed to commence the business of insuring until the whole of the capital stock shall have been paid in and secured, and an affidavit of that fact been made by the president and secretary, and filed in the clerk's office. The whole assets of the company are liable for losses, so that in the event of a large loss, the stockholders forfeit all their interest before the insured is affected. Dividends are made out of the surplus profits arising from the interest on the capital, and from the receipt of premiums, after all losses, debts, and expenses are paid, provided the capital is unimpaired; but no dividend can be made while the capital stock is impaired, or until such deficiency or loss of capital is made good.

Charters which have been obtained in the state of New York, since the year 1830, usually have a clause inserted in them, that they "shall possess the general powers, and be subject to the provisions of the eighteenth chapter of the first part of the Revised Statutes, so far as the same are applicable, and have not been repealed."

The second class of insurance companies are those which are denominated mutual companies. In these every insurer becomes a stockholder during the period for which he shall remain insured, and in amount in proportion to the premium which he pays into the company; and for this amount he is liable in case of a loss. The capital is not fixed or determined, as in the case of the former companies, but is in proportion to the amount of premiums on hand, which constitute the capital stock. The profit or dividend is paid to the insurers or stockholders, in proportion to the amount of money paid in by them, for premiums, in the same manner as shareholders in other companies. A president and board of trustees are elected in like manner, and for the performance of like duties, as the president and directors of those companies that are not mutual. There is a clause generally inserted in their charters, that no policy shall be issued until application for insurance shall have been made to a certain amount, so that they may be provided for a loss at their commencement, if any should happen to be sustained.

"In addition to the fire companies chartered by the legislature of New York, there are agencies of companies of other states and of England established in the city of New York, who insure through the intervention of agents. They generally take risks at a degree lower

than the city offices, in order to secure a portion of the business; for most insurers prefer obtaining policies from companies chartered by this state, on account of the facility with which they can obtain a knowledge of their character and capability to sustain a loss, and the rules by which they are governed; but the most important reason is, in cases of litigation arising from a loss, the party insured would be obliged to prosecute his claim in another state or country, and be governed by laws and customs with which he is, perhaps, unacquainted; besides the additional trouble and expense attending such a necessity. There is also an advantage gained by insuring in foreign companies, in the event of an extensive conflagration; for they are likely to be more secure, on account of their having fewer risks in this city, as was seen in the case of the great fire in December, 1835. That event caused the failure of several of our offices, owing to their having a large amount of risks in that part of the city which was consumed. The ruin of some merchants who were insured in them was the consequence, while those insured in the foreign offices recovered in full; because these had not issued policies for any considerable amount, and therefore their losses were not so great as materially to impair their capital. It is due to our offices, however, to state, that they are very cautious in distributing their risks, so that nothing but an uncommonly great disaster, such as that above referred to, would endanger their safety, their custom being to insure not over from 5000 to 15,000 dollars, according to their capital, on any one building, without procuring reinsurance; and no more in the immediate neighbourhood of a previous risk, or where a fire would be likely to extend.

The following table shows the number of companies, and the amount of capital in this city at the respective dates. Some of the companies included here are of a mixed character, being not only fire companies, but also taking risks upon marine and inland navigation, and upon lives.

DATE	Number of Companies	Amount of Capital	DATE	Number of Companies	Amount of Capital
		dollars			dollars
1808	5	2,000,000	1840	21	17,000,000
1830	14	6,250,000	1845	26	22,000,000
1845	30	11,000,000	1846	23	11,000,000

In addition to the above, there are at present several agencies of other companies, belonging to other states, established in this city, whose aggregate capital is equal to as much, if not more, than that of our own companies. By the above table it appears that the amount of insurance capital, properly belonging to this city, is not so great now as it was in 1825, 1830, 1835, and but little more than it was in 1820. This can be accounted for from the fact that the business of insuring has not been found profitable enough to support the different companies which have arisen during the last twenty years. Some old companies have suffered their charters to expire, and others have been destroyed by the fire.

Under 20 " "	12 1-2 and upwards " "

To add two per cent if within the parallels of 10 deg. and 28 deg. of north latitude, and 58 deg. and 86 deg. of west longitude, between the 15th of July and the 15th of October.

If north of latitude 50 deg. north, and east of longitude 2 deg. east, between the 1st of October and the 1st of March, one per cent additional premium to be paid

In all cases of over-insurance, ten per cent of the return premium is to be retained by the insurers, not exceeding one-half per cent on the amount of short property.

For a continuance of the risk beyond the year, half per cent shall be charged in addition to the *pro rata* premium for the time used.

If the policy be cancelled before the time expires, ten per cent of the whole premium to be paid in addition to the premium earned *pro rata* up to the time the policy is cancelled, but in case of the sale of a vessel, the policy may by consent be transferred, or the old policy may be surrendered without charging the ten per cent, provided the purchaser takes out a new policy at the same office on terms as favourable to the insurers; but no policy shall be cancelled merely because the vessel is to be employed in a business where the premium would be reduced below the annual rate charged, without the charge of ten per cent of the whole premium over the premium earned *pro rata*; but nothing contained in this regulation shall prevent any office from cancelling any risk such office may be desirous to get rid of, without any charge of premium, or extra premium.

One quarter per cent to be added on hardware.

GENERAL REGULATIONS.

1. If there be any line on board on cargo, or on freight, fifty per cent to be added to the premium for the passage.

2. If any goods are shipped and insured as on deck, not less than double premium to be charged, with condition not to be liable for damage by wet or exposure, nor for partial loss under fifteen per cent.

3. The north-east, or unfavourable monsoon in the China seas for outward passages to China, is from the 1st day of October to the 1st day of April.

4. The south-west, or unfavourable monsoon for homeward passages, is from the 1st day of April to the 1st day of October.

5. The hurricane months in the West India latitudes, are from the 15th day of July to the 15th day of October, and said latitudes shall be considered as being within the parallels of 70 degrees and 28 degrees of north latitude, and 58 degrees and 86 degrees of west longitude.

6. The North Sea, as expressed for additional premiums for winter months (viz., from the 1st day of October to the 1st day of March), is considered north of latitude 50 degrees north, and east of longitude 2 degrees east.

7. For any other division or allowance of average for partial loss on the whole interest of the assured under deck, there is provided for in our printed form of policy, an additional premium shall be charged of not less than one-quarter per cent, except on the rates for such cases from Great Britain and Havre already provided for in this tariff; and except on risks north and east of Florida, and those on which not less than one-eighth per cent additional premium shall be charged.

8. To add not less than one-quarter per cent for each port, and more than one, at either the beginning or the ending of the voyage, for each time used; except risks provided for in

the 14th article, and, except Elmineur, Anjer, St. Helena, and a port for advice in the British Channel.

9. In all cases of over-insurance, ten per cent of the return premium is to be retained by the insurers, not exceeding one-half per cent of the amount of short property.

10. Premiums on vessels and freights not to be less than those on cargoes of general merchandise for same voyages.

11. Specie and bullion, excepting to port or ports beyond the Cape of Good Hope or Cape Horn, to be insured as the parties may agree, provided, that it shall never be at a greater reduction than one-third from the rates herein fixed for merchandise on the same passage.

12. Specie and bullion, to port or ports beyond the Cape of Good Hope or Cape Horn, may be insured at one-quarter per cent less than merchandise.

13. When several passages are included in the same policy, the rates for each passage are to be added together.

14. If insurance be made from foreign ports to port or ports of discharge, or final port of discharge, in the United States, the coastwise premium to be added for each port used, more than one, in the United States.

15. With regard to risks not provided for in this tariff, it is agreed that the parties are to make contracts at discretion, but it is expected that companies will require rates equivalent to those named in this tariff on risks of like value, acting in good faith, and not taking one risk for a lower rate in consideration of receiving the tariff rates on another.

16. Copenhagen is considered as in the Baltic.

17. Gottenburg is not considered as in the Baltic.

INLAND NAVIGATION INSURANCES. - The Boston premiums for inland insurances are so nearly the same as those in the tariff of premiums which we have inserted under the head of "New York," that it would be superfluous to insert those of Boston here.

CLASSES OF HAZARDS AND RATES OF PREMIUMS FOR INSURANCE AGAINST LOSS OR DAMAGE BY FIRE, IN THE CITY OF NEW YORK, AS ADOPTED BY THE NEW YORK INSURANCE COMPANIES.

RULES.

1. When two buildings, having no interior communication, are offered for insurance a specific sum must be insured on each, and in like manner on property in each; but two buildings, *having* interior communication, and occupied by the same person, may be considered as one building.

2. When a building, or two or more buildings communicating, are occupied by two or more tenants, either of whom requires the hazardous or extra-hazardous privilege, the other tenants, as well as each of the buildings, shall be subject to the same charge.

3. When two buildings adjoining, with separate walls through the roof, communicate by doors or other openings, five cents additional premium to be charged on such and then contents, if occupied by more than one tenant.

Note.—No charge to be made for want of coping on a separating wall on which the charge is made for communication.

4. Policies may be once renewed for the ratio of the premium required for the period of time for which the policy was originally made.

5. Policies, with the consent of the company, may be assigned, or may be transferred from one building to another, the difference in the risk, if any, being paid.

6. A policy may be cancelled by retaining the short rate for the time expired, but in no case for less than one month, and the premium for unexpired time allowed in a new insurance, or refunded.

7. Carpenters' risks for *fifteen days* may be granted *once* during the existence of the

same policy, *gratis*; but if granted for more than fifteen days and less than a year, to be charged according to the scale for short insurances.

8. No premium for *less than one month* shall in any case be charged, excepting for carpenters' risk, which may be taken for fifteen days at half the premium for one month.

CLASSES OF BUILDINGS, AND RATES OF ANNUAL PREMIUMS, IN THE CITY OF NEW YORK.

The rates affixed to the several classes, are the premiums on buildings when occupied for purposes not hazardous, or containing merchandise, or other property, not hazardous. When otherwise occupied, the following additional premiums are charged on the buildings, as well as on merchandise and other property therein:

Hazardous occupancy	cents. 10
Extra hazardous ditto	25
Specialty hazardous, the premium that may be agreed on in each case, not less than	50
Merchandise, not hazardous, is charged in addition to the rate of the building containing it	5

Merchandise, and other articles, denominated hazardous or extra hazardous, and to which a star (*) is prefixed in the classes of hazards and minimum rates (such as paper in reams, books, stationery, watches, jewellery, &c.), are deemed not to affect the buildings in which they are contained, or other property therein.—The additional premium on those articles being charged, because of their peculiar liability to damage and loss.

DWELLING HOUSES.

	cents.
1st Class. Buildings of brick or stone, roof of tile, slate, or metal, gable walls above the roof, and coped, per 100 dollars	30
If gable or party walls below the roof	35
2nd. Buildings of brick or stone, roof, tile, slate, or metal, and part wood	45
3rd. Buildings of brick or stone, roof, wood	50
4th. Buildings of wood, with brick front, and filled in with brick to the peak	65
5th. Buildings of wood, with brick front, filled in to the plate	75
Or buildings of wood, filled in to the peak	75
Or buildings of wood, adjoining brick walls on each side	75
6th. Buildings of wood, with hollow walls, and brick front	85
Or buildings of wood, filled in to the plate	85
Or buildings of wood, adjoining a brick wall on each side	85
7th. Buildings of wood, with hollow walls, fronting on the street	90
Or buildings of wood in the rear	115

Note.—Buildings which partake of two or more classes, to be charged a *fair proportionate* price.

WAREHOUSES AND STORES.

	cents.
Of the following description, will be insured, per 100 dollars, at	30
Situated—in streets not less than fifty feet wide.	
Height—not exceeding forty feet.	
Walls—brick or stone, independent, and twelve inches or more in thickness.	
Or party walls, sixteen inches to the garret floor.	
Or party walls, twelve inches to the garret floor, with projections.	
The gable or party walls in each case carried above the roof, and coped.	
No openings in the gable walls, excepting on the corner of a street.	
Roof—tile, slate, metal, or cement.	
Gutters—brick, stone, or metal.	
Window shutters—solid iron, excepting the lower story fronting the street.	

No dormer windows, unless with iron shutters, the sides and roof of fire-proof materials.

No sky-lights, exceeding ten square feet.

Additional Charges for variations from the foregoing description. cents.

Street—less than fifty feet wide, for each foot less 1

Height—more than forty feet from the sidewalk to the eave of the roof, for the excess, per foot 2

Note.—The highest part of the front in all cases to be measured, and when fronting on two streets, the lowest front to be taken. In measuring the height of buildings, or the width of streets, the odd inches are not to be taken into the account.

Walls—twelve inch party walls to the garret floor, without projections, for each wall 6

Note.—This charge not to be made on buildings less than four stories high.

Gable or party walls—not above the roof, for each wall 3

Roof—tile, slate, or metal, and a part wood 6

All wood 15

Shutters—not of solid iron, for each wall 5

Excepting the lower story fronting the street, and excepting one of the walls at the corner of a street, if the other be charged.

Gutters—not of brick, stone, or metal, front and rear, for each 5

Corner buildings to be charged for only one front.

Dormer windows—without iron shutters, or without the sides and roof of fire-proof materials 3

Skylights—exceeding ten square feet 2

Note.—When the premises are occupied by one tenant only, five cents per 100 dollars are to be deducted from the rate of premium. The separate use of fire or lights to constitute two tenants.

When the rate of a building exceeds 100 cents (exclusive of the charge for occupancy), the excess to be discretionary.

CLASSES OF HAZARDS.

Not Hazardous.—Goods not hazardous are to be insured at five cents per 100 dollars in addition to the rate of the building in which they are contained; including coffee, flour, household furniture, indigo, linen, paints ground in oil, potash, rice, spices, sugars, teas, threshed grain, wine in casks, and such articles as are usually kept in dry-goods' stores.

Hazardous.—The following trades and occupations, goods, wares, and merchandise, are considered *hazardous*, and are charged ten cents per 100 dollars, in addition to the rate or premium on the building, viz.:—*Basket-sellers; block and pump-makers; China or earthen or glass-ware, or plate-glass in boxes, crates, or casks; cotton in bales; fire crackers and other fire works; flax; grocers with any hazardous articles; gun smiths; *hardware and cutlery; hat-finishers, hay pressed in bundles; hemp; liquor bottling cellars; *looking-glasses in boxes; Manilla grass; *milliners' stock; oil; *paper-hangings; *paper in reams; pitch; porter houses; rags in packages; sail makers; saltpetre; cigar-makers; spirituous liquors; sulphur; tallow; tar; taverns; turpentine; victualling-shops; *window-glass in boxes; wine-dealers' stock, not including wine in glass, unpacked; *wine, in glass, in packages; *wooden-ware sellers.

Extra hazardous.—The following trades and occupations, goods, wares, and merchandise, are deemed *extra hazardous*, and will be charged twenty-five cents and upwards per 100 dollars, in addition to the rate of premium on the building, viz.:—Acids, inflammable; alcohol; apothecaries; basket-bleachers or makers; blacksmiths; boat-builders; *book-sellers' stock; brass foundries; brush-makers' stock; *cabinet-makers' stock; carvers; China, or earthen, or glass ware, or looking-glasses unpacked, and buildings in which the same is packed or unpacked; chocolate-makers; colourmen's stock; *confectioners' stock; cooper; copper plate printers; druggists; other; fur dressers; grate-makers; *jewellers' stock; lamp manufactories; *lamp-sellers' stock; lime, unlaked, liquor, in glass, un-

packed. (*Note.*—To subject the building and its contents to hazardous charge only.) Morocco manufacturers; *optical, mathematical, and musical instrument makers'; and performers' stock; painters' stock; phosphorus; *pictures and prints; players or plated ware manufacturers; plumbers and pewterers; *pocket-book makers' stock; printers of newspapers or engravings; rug-stones; ship chandlers; *silversmiths' or stationers' stock; snuff-makers; soap-makers; spirits of turpentine; stove manufactories; tin or sheet-iron workers; tobacco manufactories; *toy-shop keepers' stock; type or stereotype foundries; turners; upholstery manufacturers; varnish; *watch-makers' stock, and tools; *window or plate glass, unpacked; wine, in glass, unpacked.

Specially hazardous.—The following are deemed specially hazardous, and will be charged, in addition to the rate of the building, as per table of minimum rates, viz.: Bakers; bark-mills; blending-works; blind-makers; bookbinders; brewers; brimstone works; cabinet-makers; carpenters; chair-makers; chemists; coach-makers; comb-makers; confectionery-makers; corn-kilns; copper-smiths; cotton mills; cotton unpacked; distillers; dyers; firework-makers; flax-mills; frame-makers; fringe makers; fulling-mills; gas makers, or others; grist or flour mills; gunpowder; hat manufactories; hay unpacked; houses, building or repairing; ink-makers; iron foundries; ivory-black manufacturers; lamp-black manufacturers; livery stables; lumber yards; mallogany yards; match-makers; matches makers; metal mills; musical instrument makers; oil boiling-houses; oil-mills; packing buildings and yards; paper mills; perfumery-makers; planing or growing mills; pocket-book-makers; powder mills; printers of books and jobbing; rectifiers of liquors; rope-makers; sash makers; saw-mills; spirit-gas-makers or sellers; stables (private); steamboats; steam-engines in use; sugar refiners; tailor-masters or chandlers; tanners; tar boiling-houses; theatres and other places of public exhibition; timber yards; turpentine distillers; vetch makers; wool mills; and generally all mills and manufacturing establishments, and all trades and occupations requiring the use of fire heat, not before enumerated.

Country Houses.—Constructed of brick, stone, or wood, detached from, and not endangered by other buildings. 60 cents per 100 dollars, or upwards.

If roof of slate or metal, 10 cents per 100 dollars may be deducted.

Barns and stables. 85

Note.—When good and sufficient electric conductors are attached, ten cents per 100 dollars may be deducted.

MINIMUM RATES for Hazardous, Extra Hazardous, and Specially Hazardous Risks, to be added to the Rate of the Building.

Note.—When goods, hazardous or extra hazardous, are stored in a building, or when a building is used for the purpose of carrying on any trade or vocation, classed as *hazardous*, *extra hazardous*, or *specially hazardous*, such building, as well as the goods contained therein, shall be charged with the *additional* premium to which such risks are subjected—excepting when a *star* (*) is prefixed, which is intended to denote that *such goods only* are to be charged, *—not the building, or other goods not hazardous* therein.

The origin of the fires, during the year 1840, according to the classification of the commissioners' report, were:—

Supposed to be by incendiaries, forty-three; supposed to be by design, seven; accidental, twenty-three; cause unknown, two; by an incendiary, one; by sparks from chimneys, three; defect in chimneys, three; sparks from forge, two; lighted lamp, one; locomotive matches, three; lighted candle, one; spirit lamp, one; defect in fire-place, one; cause not ascertained, two; from stove-pipe, one; sparks from candle, one; slack lime, one.

Description of Buildings in which Fire originated.—Frame buildings, forty-three; brick, thirty-four; stone, three; brick fronts, five; five proof, thirteen.

PROFITS OF INSURANCE COMPANIES.

The Atlantic Insurance Company of New York has, in ten years, divided 249½ per cent, and had in 1841 a surplus on hand of 150 per cent, which, if divided, would give the stockholders their capital back, and 500 per cent; and if the interest on the dividends were added, the sum would be much larger.

The following are the dividends declared the first ten years:

	per cent		per cent

LIGHTHOUSE ESTABLISHMENTS OF THE UNITED STATES.

(Extracts from Reports to Congress.)

Original Cost of Construction.—The committee have gone no further back than the year 1791, when the number of lighthouses were only ten, and the entire expense of that year was 22,000 dollars. From that period to the present, the increase has kept pace with the rapidly growing commerce and navigation of the country.

The present number of lighthouses is	256
" lightboats	30
" beacons without lights	35
" buoys, about	1000

The total cost of the lighthouse, lightboat, beacon, and buoy establishment (including cost of sites, buildings, repairs, maintenance, &c., from 1791 to 1817, was (round numbers).	dollars.
from 1791 to 1817	1,872,000
from 1817 to 1841	7,216,000
Total	9,088,000

Being an average per annum expense of about 180,000 dollars.

The total cost of building lighthouses (including cost of sites), lightboats, beacons, and buoys, from 1791 to 1817, was	207,000
" from 1817 to 1841	1,910,000

Total	2,215,000
Deduct cost of beacons and buoys	500,000
Total for 286 lighthouses and boats	1,715,000

Being an average of about 6000 dollars; showing, in the opinion of your committee, great economy in these constructions.* Probably truer economy would have been consulted by more liberal appropriations for these works, thereby adding to their solidity and permanency.†

Comparative Costs of Different Years.—The amount of expenditure of any given year, compared with that of another year, will appear more or less depending on the number of new constructions, either of houses or boats, in the respective years, the amount of repairs, cost of oil, &c. Some seasons are noted for the frequency and violence of their storms; in such years the expense of repairs will be great. The tables furnished us, therefore, will only enable us to draw conclusions for or against the economy of the general expenditure.

The entire expense of 1841 was 474,000 dollars; showing a large proportionate decrease of that of 1791, when, with ten lighthouses, the expense was, as before stated, only 22,000 dollars. Had the expense remained in the ratio of the increased number of lights, it would have been, in 1841, 643,000 dollars.

In 1820, the number of lighthouses, &c., were fifty-five. The whole expenditure for the year was 244,000 dollars. It should have been 842,000 dollars in 1841, if the increase of expenditure had been in the ratio of the increased number of lights. And so of 1835: number of houses, 201; expenditure, 352,000 dollars. The expenditure of 1841 should have been 549,000 dollars.

For the last four years the amount expended in comparison with previous years, for the building of houses and purchase of sites, has been great; but not, in the opinion of the committee, greater than the requirements of navigation demanded. From 1837 to 1841, the aggregate amount of expenditure for all purposes was 2,176,000 dollars. Of this amount there was expended, in the same time, for purchase of sites and buildings, 533,000 dollars; being more than one-fourth of the whole expenditure (1,992,000 dollars) for the same objects for twenty-five years, from 1816 to 1841.

It has been hardly possible that an unnecessary lighthouse could have been built since 1837. In that year Congress, for the first time, very wisely directed the Board of Navy Commissioners to cause thorough examinations and surveys to be made by competent officers of the navy of all the sites proposed for lighthouses mentioned in the Act of the 3rd of March, in that year. These examinations and surveys were made.

Comparative Cost of Construction.—From a report of the secretary of the treasury, made to Congress, in 1836 (Ex. Doc. 1835—36, vol. iii., No. 66), it appears that the cost of lighthouses in the United States is on an average 6000 dollars; while in England the cost is 10,000 dollars, and in France 8000 dollars. From a report of the Director-General of France (see Report of Select Committee to House of Commons, August 8, 1834, Appendix R.), it appears that the average cost of building thirteen lighthouses, &c., in 1832 and 1833, was more, by some hundreds of dollars, than the estimate of the secretary.

The same report shows (p. 7) that the average cost of twelve British lights, built from 1820 to 1834, also exceeds the calculation of the secretary.

* The expense of beacons and buoys, from 1791 to 1819, was 267,783 dollars; from 1819 to this period, the expense has no doubt been greater, annually. During the latter period, the lighthouse, and beacon, and buoy accounts, have been classed together, rendering it difficult to ascertain what the lighthouse establishment proper should be charged with. An expense of 10,000 dollars per annum, for beacons and buoys, from 1791 to 1841, is, no doubt, small enough; making in the aggregate 500,000 dollars.

† Since writing this report, the committee have received from the fifth auditor, the annexed statement (marked B), giving the number of lighthouses built since 1820, and the cost of each; from this statement it appears that the average cost of these lighthouses, including cost of sites, is less than 5000 dollars. The expenditures are less than the appropriations for these erections by more than 224,000 dollars.

‡ From the statement furnished by the auditor, annexed (marked C), it appears that the cost of the construction of thirty-three lightboats averages about 9300 dollars, and that the expenditure for these constructions is less than the appropriations by 59,000 dollars, showing an aggregate expenditure for these objects of 281,000 dollars less than the appropriations.

The average cost of sites and building thirteen lights in Ireland under the Dublin Board, from 1820 to 1834, is more than 65,000 dollars.—(Ibid., p. 74.)

From an estimate made by M. Fresnel, French Director of Lights (Ibid., Appendix R., p. 236), it is shown, that—

	dollars.
Thirty-one lights, to be built in 1833, 1834, 1835, and 1836, would cost on an average about	20,000
Ditto, apparatus, lantern, lamps, &c.	4,500
Of these thirty-one lights, eighteen were to be of the first order, and would cost, on an average, for sites and building	27,000
Ditto, apparatus, lantern, lamps, &c.	5,500

Expense of Establishment, compared with that of England and France.—From a report of the Fifth Auditor, made to Congress, October 1, 1835, it appears that—

	dollars.
The average expenses, per annum, of sustaining each lighthouse, including repairs, salaries of keepers, oil, &c., was	914
Ditto, lightboats	2862
Ditto, lighthouses, England	2268
Ditto, lightboats in England	5922

From the report of the Select Committee referred to (p. 30), the average expense of each of the lights is as follows:—

	£	dollars.
Thirty-six lighthouses in England under Trinity Board	511	
Thirty-four ditto Ireland ditto ditto	500	
Thirty-two ditto Scotland ditto ditto	514	
Average	508	= 2450
American, as above		911
Difference in favour of America		1539

Expense of Light-Boats.

	£	dollars.
Thirteen boats in England	1334	
Three ditto Ireland	1080	
Average	1207	= 5341
American, as above		2862
Difference in favour of American boats		2979

From a report made by the Trinity Board, to which is intrusted the management of the British lights, made to the House of Commons, in 1837, the expenses are thus stated:—

	dollars.
Forty-two lighthouses, average expense	2610
Thirteen floating lights ditto	8381

For the year ending June 30, 1837, the expenses for the same services in the United States were as follows:—

	dollars.	dollars.
Two hundred and twelve lighthouses, average		1115
Twenty-seven floating lights		2391
Average expense of British lights	5945	
Ditto ditto American do.	1753	

Difference in favour of American 3742

Being more than 200 per cent in favour of American economy in this branch of the public service.

Besides, in England, commerce is heavily taxed, in the form of light-money, by

the owners and lessees of lighthouses, for their own emolument and for the support of pensioners and charities. There are fourteen lighthouses thus owned. The promptings of individual sagacity and private interest will usually insure the performance of any enterprise or the sustaining of any establishment with an economy much exceeding that used by agents of governments. But the private lights in England are kept up at an expense much exceeding that of the United States.

Fourteen lights in hands of private persons in England, 1831:

	£
Gross amount of collections	79,676
Allowance for collection	£10,244
Expense of maintenance	9,100
	— 19,344
Profits	60,332

Average expense of maintenance, 650*l.* (3140 dollars). 180 per cent more than American expenditure. (See same report, p. 37.)

The annual expense of maintaining private lights of the first class is much larger, being on an average 4760 dollars. (*Ibid.*, p. 41.)

The expense of the third (smallest) class of individual lights is (average) 2490 dollars, being more than 120 per cent more than the American lights, great and small.

This comparison is highly favourable to the economy of our system.

Comparison with French Lights.—The report of the select committee referred to (p. 31), states that the annual charge of maintaining a lens light of the first order to be 340*l.*, say 1640 dollars; but this is exclusive of repairs.

In all the French accounts of "expense of maintenance," repairs are excluded; so says M. Fresnel, principal engineer (see *Ibid.*, Appendix R.). M. Fresnel says: "These (the British) expenditures are found mixed up with each other (that is cost of maintenance and repairs); hence the impossibility of arriving, with any degree of certainty, at a comparative estimate of the two services (French and British)."

Our accounts are mingled in the same way; hence the like difficulty of instituting a comparison with the expenses of the French lights.

That the expenditure of the French establishment should be less than ours, or that of Great Britain, would excite no surprise, when the relative cost of labour and skill is taken into account.

The British committee (p. 31), after commenting on the unequal expenditure in the maintenance of French and British lights, say: "In explanation of this difference, it must be observed—

"1st. Salaries to light-keepers in England are understood to be nearly double those in France.

"2nd. The price of spermaceti oil used in England is stated to be double to the oil de colza used in France."

Wages in this country are much higher than in England even; and we also use sperm oil. Yet notwithstanding the great inequality in the salaries of keepers and the cost of oil, it will appear from the evidence furnished by M. Fresnel, that the management of our light establishment cannot justly be reproached with want of prudence and economy. M. Fresnel says (see p. 229, Appendix) that

	francs.	dollars.
The annual expenditure of a light of the first class (exclusive of repairs) is	8500	= 1615
The annual expenditure of a light of the second class (exclusive of repairs) is	7000	= 1330
The annual expenditure of a light of the third class (exclusive of repairs) is	3600	= 684
Average		1209

Some nine per cent more than the cost of American lights, including cost of repairs.

The report (p. 233) gives the expenditure of some of the lights specifically, from which it appears that the cost of maintenance is much larger than the above account of M. Fresnel, viz.:

	francs.	dollars.
Cordovan light of the first order, ordinary annual expenditure	11,598	= 2304
Expense of repairs		950
Total expense		3154
Ushant light, first order (p. 235), ordinary annual expenditure (exclusive of repairs)	9000	= 1749
St. Mathieu light, second order, ordinary expenses (repairs excluded)	6000	= 1140

The average annual expense of these three lights (exclusive of repairs) is 1685 dollars; exceeding, by fifty per cent, the average expense of American lights.

The most expensive American light is that on Frank's Island, having two keepers, and, in 1841, amounted to 180,623 dollars, as follows:

	dls.	cts.
Keeper's salary	600	00
Assistant	300	00
Oil 779 gallons	779	00
Tubes, glasses, &c.	68	24
Window glass and putty	0	00

The average expense of the Cordovan and Ushant lights, both of the first order was 1957 dollars, being more, by 151 dollars than the Frank's Island light.

The little experience we have had in this country in the use of the French lenticular apparatus, induces the belief that our anticipation in regard to the saving of oil, will not be fully realised.

The two lights in the lens plan, at Neversink, consume per annum 1095 gallons of oil; they consumed, on the old plan (thirty-one argand lamps), 992 gallons of oil.

This consumption of oil is about the same as that of a lens light of the first order in France.

It is said in the report (*Ibid.*, p. 32) that "the consumption of oil in the Cordovan lighthouse is equal to that of seventeen argand lamps." The average consumption, per annum, of such a lamp, is thirty-five gallons, which gives to the Cordovan light a consumption of 595 gallons per annum; being nine per cent more than that of one of the Neversink lights.

The French manufacturer of the lenticular apparatus claims for it a great saving of oil. Further experience in this country may demonstrate the reality of this claim. But it remains to be proved to what extent, if any, such saving may be carried.

The communication of M. Lepaute, the manufacturer, to Governor Davis (See Senate Doc. 1st. Sess., 26th Congress, No. 474), in which he attempts to show the difference in the consumption of oil in the French and American lights, does not inform us on what authority the quantities of oil consumed in the American houses are given. With the best intentions to give the quantities correct, he may not have been in possession of the true account of them.

He puts down the quantity consumed at the two Neversink lights, under the old plan, at 1135 gallons; but the amount consumed was 992 gallons only—a mistake of fifteen per cent in favour of his statement. He also puts down for the use of lens lights at that place, 800 gallons, but we consume in them 1095—a mistake of thirty-seven per cent in favour of the lens lights. The two mistakes, combined, show more than fifty per cent in favour of the lenses.

In like manner he puts down the consumption of oil at Frank's Island light, at the mouth of the Mississippi, at 1050 gallons, but the true amount is only 779 gallons, an error of thirty-five per cent. Should the same errors extend through the whole of his table (and the committee have examined these two cases, being the only ones before them showing the actual quantity of oil consumed) the result, as stated by him, will hardly bear close examination.

It has been said that the French lights are superior to those of any other nation. Their sea-lights are no doubt excellent. They have kept pace with the march of science and the improvements of the age; but it is doubted whether their claim to any considerable degree of superiority can be successfully maintained. The British select committee (*Ibid.*, p. 31.) say the British lights are considered generally very good, and sufficient for the purposes they are intended for, and superior to the generality of French lights, many of which are harbour lights, and, perhaps, small in comparison with the sea-lights."

COMPARISON of American and French Lights in regard to Reach of Light.

FRENCH.

1st order, average portée, about 6½ leagues, 20 miles	2d order, small, average portée, about 4 leagues 12 miles.

The committee are unable to give the reach of visibility of all the lighthouses in the United States. The limits of those which have been ascertained warrant the conclusion that they are, on an average, larger than the French lights.

Professor Paine, of Cambridge College, in 1838, made a survey of twelve lighthouses in Boston bay and vicinity. (See House Report, Third Session, Twenty-fifth Congress, No. 187.) He says:—"I therefore feel myself warranted in drawing the following conclusions: that, in ordinary clear weather, our best lights, such as the Boston, Highland, Scituate, &c., are visible from the mast-head of a square-rigged vessel about twenty five miles; that our second class of lights, such as those on Thatcher's island, Eastern point, the high light on Baker's island, and those on Plum island, are visible from twenty to twenty-two miles; and that the third class, such as those at Straitmouth island, Ipswich beach, Squam, Marblehead, and Long Island head, are visible from fifteen to eighteen miles."

Lieutenant Bache, in his report, to which reference has been made, gives the ranges of visibility of fifteen lights, varying from nineteen to twelve miles, and averaging fourteen miles. Of these lights, eight were of the third class, having only nine inch reflectors; five of the second class, having fourteen inch reflectors; and one of the first class, with eighteen inch reflectors. Mr. Lewis gives a statement of the portées of all the lights of the first class, from Passamaquoddy to South Pass entrance of the Mississippi, in November, 1839, ranging from fifteen to thirty miles, and averaging twenty-four miles.—(Senate Document, 1837—38, vol. ii., No. 138.) Mr. Frick, superintendent of lights at Baltimore, gives the portées of twelve lights in the Chesapeake, ranging from ten to twenty miles, averaging fifteen miles.—(*Ibid.*)

Mr. Anderson, superintendent at Portland, Maine, says, that fifteen harbour-lights in that vicinity can be seen from twelve to eighteen miles. These are not intended to be seen at sea. Also, that twelve coast-lights in the same vicinity can be seen from five to ten leagues.—(*Ibid.*)

It appears from a list of the lighthouses, published by the superintendent, in 1839, that the average "reach of light" of seventy-six lighthouses (that being the number whose reach is given) is nineteen miles. The average "reach" of six of our best lights (Neversink, Baker's island, &c.) is twenty-seven miles and a half.

The committee believe that the statements of average distances of extreme visibility made by Professor Paine, is true in regard to all our lights.

The average reach of light of 170 British lights, as shown in the British list, published at the Hydrographical office, Admiralty, in 1832, is less than fourteen miles. The

average reach of six of their best lights (Needles, Beachy Head, Lundy, &c.) is twenty-eight miles and a half.

In comparison with the progress of improvement in the old world, our march in this, as in almost every other useful establishment, has been extremely rapid. In the comparatively short period of fifty years, we have built 276 lighthouses and boats. Since 1812, the useful effect of our lights has been nearly doubled, and the consumption of oil lessened by more than fifty per cent. For centuries before our existence as a nation, England and France had been commercial nations; but, up to the close of the last century, no improvement had been made in the quality of their lights. About that period oil was substituted for coal. At the close of the year 1812, we had forty lighthouses fitted up with patent-lamps and parabolic reflectors. At that time, both England and France had not ten houses thus fitted up.

It is believed that, when the improvements now in progress shall have been effected (in connexion with a proposed change in the mode of inspection) our system will be more efficient, useful, and economical than that of any other nation.

Forty-four collectors act as superintendents of the lights in their respective districts. By the act of May 7, 1822, their maximum compensation per annum is 400 dollars. Some four or five receive that amount; the others receive from 100 dollars to 200 dollars each, per annum. These superintendents are required to visit the lighthouses but once each year. Captain Howland, who is in the employ of the department, also visits them once in each year, and makes reports of their condition, &c., to the fifth auditor.

Mode of Contracting for Building, Apparatus, and Oil.—Since 1816, all the lighthouses and light-boats have been built by contract, invited by notice in the public prints. The contracts invariably have been given to the lowest bidder, having the ability to guarantee its performance. A suitable practical mechanic is employed to oversee the work constantly. Nothing is paid or advanced to the contractor until he obtains the certificate of the overseer, that the contract has been faithfully performed. In like manner, proposals for fitting up the lighthouses with lamps, reflectors, &c., are invited, and the contracts given to the lowest bidder.

By this mode competition is elicited, and, in the opinion of the committee, economy most effectually promoted. No losses can occur, as no advances are made until the completion of the work.

In the same way all the oil is procured. It is the interest of the contractor to furnish the best quality; for if found bad, he not only gets no pay for it, but is bound to take it back, and substitute the best quality. Actual experiment by burning is the only true test of the quality of oil. The oleometer will not prove it. The practice now adopted of taking samples from each cask and submitting them to the test of the lamp, cannot but insure the best quality. That oil congeals in cold weather is no proof of its badness. Oil pressed in winter, when the thermometer is at a given degree, will congeal whenever the thermometer falls below that degree. A stove and oil heater are the only remedies.

A vessel in the employ of the department is constantly engaged in visiting the lighthouses, supplying them with oil and other necessary supplies and having on board a mechanic to make all proper repairs to the lighting apparatus. Captain Howland, in 1840, 1841, on board this vessel, visited 155 lighthouses, from Maine to the Sabine, and put them in repair. As a proof that the oil furnished by the contractors is good, he found but 900 gallons of oil in all of them bad, and much of this was mere settlings.

It has been objected by some who arraign the department for want of economy, that the average consumption of oil in our lighthouses is less than that consumed in the British houses. This is no doubt true. But the committee do not perceive the justice and consistency of the rebuke, especially as it appears that our lights are more efficient than those of Great Britain. It is said that the average annual consumption of oil per lamp in England is forty-three gallons. From the accounts given by Captain Howland it does not exceed thirty gallons per lamp: showing an economy in the use of oil of more than forty-three per cent over the British lights.

It will be seen by the above statement, that the average expense of the British

floating lights for 1838 was 7660 dollars, and that the average expense of the American floating lights, which, in general, are larger than the British, is 2399 dollars only; and it is asserted in the reports, "that the American floating lights are better adapted for the purpose than the British, and that the lights are seen (whilst the Trinity Board state theirs to be seen about nine miles only) from ten to fifteen miles. A comparison of the drawings of both nations, which is in the light department office, will convince any person of the superior excellence of the American plan."

CHAPTER XXXIV.

CURRENCY AND BANKING INSTITUTIONS OF THE UNITED STATES OF AMERICA.

IF the rise and fatal consequences of the Mississippi scheme in France, and of the South Sea delusion in England, afford lessons of instruction to men who would act wisely as individuals, or to those who may be connected with speculative projects, and especially to those who are intrusted with the administrative, or legislative, affairs of a nation, we may assuredly refer to the history of "Currency and Banking" in America, for facts which ought to teach wisdom by experience.

In reviewing the history of the Currency and Banks of the United States, we shall confine ourselves to facts, to the opinions of leading men in and out of Congress, and to statistical tables; and, we shall refrain from introducing any speculative theory for improving the American system, or rather systems, of currency and banking: leaving the history of facts, and of results, as materials for instruction.

As early in colonial history as 1690, a paper currency was circulated under the designation of bills of credit. For the redemption of these bills, the colonies which issued them pledged their property and revenues. This appeared sufficient, or, at least, plausible, security for maintaining the standard value for which those paper bills were first exchanged. They might well be designated the Paper Currency of Expediency. Their nativity occurred in the gravest, and, as was believed, the most religious of the colonies—Massachusetts. That colony was, at the same time, strange as it may appear, the most warlike.

A maritime expedition was sent, in 1690, from New England against Quebec, attended, comparatively to the resources of the colony, with enormous expense. This expedition was placed under the command of Sir Wm. Phipps, and consisted of thirty-four vessels, and about 7000 men. The armament reached Quebec in safety, and attempted to bombard that fortress. After two gallant actions ashore, the New England forces were compelled to abandon the impracticable enterprise, and sailed down the St. Lawrence. Eight of the principal ships, with all on board, perished in the Gulf. Montreal was at the same time, to have been

attacked by land; but this design was frustrated by the defection of the Iroquois nations.*

To discharge the liabilities to which the colonial administration was pledged, for paying the expense of this disastrous crusade—for it partook of the latter character—bills of credit were used by Massachusetts. The other colonies soon followed this very convenient example. Whenever an emergency arose, no expedient could have been more, readily, suitable to those who did not reflect on future exigencies.

The bills of credit, however, notwithstanding the colonial pledges, soon depreciated, and gave birth to that pernicious variety of currencies, that is to say,—the differences between specie and paper values, which has not yet disappeared in America. At first they depreciated, so far only as to constitute a *legalised* tender for the payment of taxes and debts in New England, at the rates of six shillings paper for a *Spanish* silver dollar; in New York, at eight shillings; and in Pennsylvania, at seven shillings and sixpence for a silver dollar. But the depreciation did not halt at these rates, especially in New England and Carolina.

In 1745, another expedition of a semi-crusade character,† was fitted out in Massachusetts against Louisburg. It was successful in capturing that fortress; but the expense demanded a fresh issue of from 2,000,000*l.* to 3,000,000*l.* in bills of credit, which were declared *lawful money*, and Mr. Pitkin states the depreciation in 1748 as follows, viz.:—100*l.* sterling in specie, or a bill on London, was equivalent in value to *lawful paper money* of New England 1100*l.*, of New York 190*l.*, of East Jersey 190*l.*, of West Jersey 180*l.*, of Pennsylvania 180*l.*, of Maryland 200*l.*, of Virginia 125*l.*, of North Carolina 1000*l.*, of South Carolina 700*l.*‡

Great Britain soon afterwards ceded Louisburg to France, greatly to the mortification, but certainly to the advantage, of Massachusetts: for the latter received from the British treasury about 183,000*l.*, on account of the expenses of the Louisburg expedition; and with this sum compounded for the redemption of paper bills. The composition was under two shillings in the pound sterling: for *fifty shillings* in lawful paper money, one ounce of specie money was given.

The war of American independence, like all modern wars, rendered indispensable the borrowing of money, and the issuing of paper bills of credit. Bills of credit were issued by Congress in 1775 to the amount of 3,000,000 dollars large sums were added afterwards, and Mr. Pitkin observes,—“A depreciation in value was the natural consequence, although Congress made them a tender, in payment of all private debts, and declared a refusal to receive them to be an extinguishment of the debt itself. This depreciation began to be seriously felt,

early in the year 1777; and increased with the increase of issues. In September 1779, these issues amounted to 160,000,000 dollars; when Congress declared, that, on no account, should they ever exceed 200,000,000 dollars: and bills to this amount were issued, before the close of that year; a sum too large to admit of a redemption at par, and in the course of the years 1780 and 1781, the bills entirely stopped circulation. Nor has any part of them ever been redeemed, except at one hundred for one, under the funding system, first established, by the present national government.

" Soon after the death of continental money, at the suggestion of Robert Morris, superintendent of finance, Congress established a national bank, by the name of, 'The President and Directors of the Bank of North America.' This institution went into successful operation in December, 1781, with a capital of only 400,000 dollars, and under the management of its projector and others associated with him, contributed, as far as its limited means would allow, to relieve the financial distress of the country at that period."

The Bank of North America was not a chartered bank. It was instituted under an ordinance, agreeably to the articles of confederation. Its capital was too limited; and, although managed with judicious wisdom and great ability, by Mr. Morris, it was unable to provide a circulating medium for the United Republic. The war, during its continuance, had annihilated a specie currency in America, by preventing the importation of money, which trade would have brought into the country, and by suppressing also the interchange of commodities, which would have produced much the same effects as the circulation of specie. Trade languished after the war ceased, as the products of labour, for a foreign market, and consequently commerce, are never suddenly brought into activity.

Several of the states resorted again to the colonial expedient of issuing bills of credit, and of framing *tender laws*. Under the latter, personal property was sometimes made a tender for the payment of individual debts: the value of the property being decided by appraisers.

On the adoption of the constitution of the United States, the issuing of bills of credit was abolished. Gold and silver were, alone, declared to be a legal tender, either for the payment of taxes, or of personal debts. This measure was prudent,—but it was embarrassing, when it was ascertained, that for a circulating medium there existed in specie only the savings of thrifty and non-speculating individuals, who would not consider it wise, under a new state of circumstances, to risk the fruits of non-expensive habits, and of industry; and that no more than 2,000,000 dollars constituted the banking capital of the whole United Republic. This capital was invested in the bank of North America; the bank of New York, in the city of New York; and, the bank of Massachusetts, in the city of Boston. It became absolutely necessary to provide, for the general emergency. Mr. Alexander Hamilton, a high authority, was secretary of the

treasury in 1790. He boldly recommended the establishment of a national bank, under charter, to be granted in accordance with an act to be passed by Congress for the purpose. Washington was president. Both Jefferson and Maddison were, on constitutional grounds, strongly opposed to the projected institution. The power of calling into action the necessary and proper means of regulating the currency, undoubtedly vested in Congress by the constitution, was argued by the supporters of the national banks, as including the constitutional right to pass the law. Jefferson, Maddison, and others, who opposed the measure, contended that the meaning was restricted to *those means being absolutely necessary*.

It was opposed chiefly, on the ground that the government was restricted to the exercise only of those powers literally specified in the constitution; that the power to incorporate a bank was not specified as one of them; and "that the power given to Congress to pass all laws necessary to execute the specified powers must be confined to all the necessary means to accomplish the ends incident to the nature of the specified powers. Upon the other side it was contended that incidental, as well as specified, powers belonged to the government; that where general objects were stated as within the province of the government, all the usual means necessary to accomplish those objects were incidental to them; and that a bank was a well-known, and usual, instrument for accomplishing the objects specified by the constitution." It was further maintained, that the power to incorporate banking institutions of any kind whatever was not among the enumerated powers, and that, "to go beyond the specified powers, prescribed by the constitution, was to take possession of a broad, undefined, and dangerous field of jurisdiction." The bank bill, however, was passed by the two houses of Congress, probably as much through the emergent necessity of regulating the currency, as from an absolute conviction of the constitutional right of Congress to pass a law for granting a charter of incorporation; but certainly not, until after its constitutional principle was argued with extraordinary ability in both houses. "It was also discussed on its constitutional grounds, with great and conflicting ability in the cabinet. The secretary of state and the attorney-general considered that Congress had *transcended its powers*; but a contrary opinion was maintained by the secretary of the treasury. After profound and able debates by his cabinet, the question was referred to President Washington, and he gave it as his deliberate conviction that the power was invested in the government by the constitution to incorporate a bank, and in conformity therewith the bank was established."*

It was not, however, until February, 1794 that the bank of the United States, in its corporate form, began its operations. The capital of the bank was above ten millions of dollars, of which eight millions were to be subscribed by indi-

* Kent's Commentaries, vol. i., p. 251.

viduals, and two millions by the United States. Two millions of the amount subscribed by individuals were to be paid in specie, and six millions in six per cent stock of the United States. The charter of the bank was limited to the 4th of March, 1811: during which period no other national bank was to be established. This institution was certainly beneficial to the country, and profitable to its stock-holders; for it paid them an annual dividend of $8\frac{1}{2}$ per cent.

As the charter of the bank would expire in February, 1811, Mr. Gallatin, secretary of the treasury, on the 3rd day of March, 1809, reported in favour of a renewal of the charter.

The general condition of the bank was stated by Mr. Gallatin, in his report, as follows:—

		dollars.	dollars.
Cr. I. Debts due to the bank—			
1. Six per cent stock, remaining part of the original subscription		2,230,000	
2. Loans to individuals, consisting chiefly of discounted notes, at sixty days		15,000,000	
3. Due by banks incorporated by the States		800,000	
		<hr/>	18,030,000
II. Specie in the vaults			5,000,000
III. Cost of lots of ground and buildings erected			480,000
			<hr/>
Total, Cr.			23,510,000
Dr I. Capital stock of the bank			
II. Moneys deposited by government and by individuals		10,000,000	
		8,500,000	
III. Bank notes in circulation		4,500,000	
		<hr/>	23,000,000
Total, Dr.			<hr/>
Leaving a balance for contingencies of			510,000

The secretary contended that this statement proved that, as a bank, its affairs "had been wisely and skilfully managed."

Mr. Gallatin proposed that, on the renewal of the charter, the capital should ultimately be increased to 30,000,000 dollars.

The report was laid before the senate, and Congress rose the same day. Various plans were brought forward the following year: one, which had few advocates, for establishing a national bank in the city of Washington. The charter of the bank of the United States was allowed to expire. Party feeling, it is alleged, as much as patriotism, prevented its renewal. Mr. Pitkin observes—

"The influence of state banks was also brought to bear on the great question then before Congress; and, when it is considered that the number of these banks had at that time increased to nearly ninety, located in most of the states, with a capital of more than forty millions, their influence could have had no inconsiderable weight. With this union of views and interest against the bank, it is not strange that the charter granting it should be suffered to expire."*

* Mr. Crawford, of the senate, as chairman of the committee on the bill, says, "The democratic presses in these great states (referring to the states opposed to the bank) have, for more than twelve months past, teemed with the most scurrilous abuse against every member of Congress, who has dared to utter a syllable, in favour of a renewal of the bank charter. The member who

War followed, and the state banks furnished to the government the greater part of its loans, in order to carry on the war, and, at the same time, aided in the collection and disbursement of the revenue. Increased issues of paper, and the depression of commerce, occasioned the banks south of New England to suspend payment in specie. Depreciation followed, and the government raised loans, for carrying on the war, upon the most disadvantageous terms.

During the session of Congress of September, 1814, Mr. Dallas, then secretary of the treasury, submitted a plan for a national bank. He contended that its direct tendency would be to restore and continue an uniform national currency: declaring, at the same time, that this object could not be effected by the state banks. The nation had been labouring under the evils of a disordered currency, and Congress, it was believed, felt disposed to organise an institution that might, if possible, afford relief, and establish the credit of the country upon a solid foundation.

Mr. Dallas, secretary to the treasury, brought forward in the session which met in September, 1814, a scheme for a national bank, with a capital of 50,000,000 dollars, divided into 100,000 shares of 500 dollars each; three-fifths of the capital, 30,000,000 dollars, to be subscribed by corporations or, by individuals, and two-fifths, 20,000,000 dollars, by the United States. Of the subscriptions by corporations or individuals, one-fifth, or 6,000,000 dollars, to be paid in specie, and four-fifths, or 24,000,000 dollars, either in specie or six per cent stock, issued since the declaration of war, and in treasury notes, in the proportion of one-fifth of the latter, and three-fifths of the former. The subscription of the United States to be paid in six per cent stock; the treasury notes subscribed might be paid in public six per cent stock; and no part of the public stock, which constituted a portion of the capital, was to be sold, during the then existing war, nor at any subsequent time, for less than par; nor, at any time, to an amount exceeding one moiety, without the consent of Congress. The bank was to be bound to lend to the United States treasury 30,000,000 dollars, at six per cent interest.—*Pitkin.*

A bill was afterwards submitted to the house, nearly in accordance with the above plan.

Differences of opinion, however, were soon manifested, as to some of the principles on which such a bank would be established. These differences involved the amount of capital, and whether it should chiefly consist of six per cent public stock, then issued, or of treasury notes to be issued; whether the United States treasury should hold stock in it, and have a direction in its management; whether the bank should be bound to lend the government 30,000,000

dares to give his opinion in favour of the renewal of the charter, is instantly charged with being bribed by the agents of the bank—with being corrupt—with having trampled upon the rights and liberties of the people—with having sold the sovereignty of the United States to foreign capitalist—with being guilty of perjury, by having violated the constitution."

dollars when required, and be prohibited from selling public stock, during the continuance of the war; and whether it should have power to suspend specie payments.

Mr. Calhoun proposed "that the capital should consist of 6,000,000 dollars in specie, and 44,000,000 dollars in treasury notes, to be *thereafter* issued, and which might be paid in six per cent stock, and sold at the pleasure of the bank; that the United States should not be a stockholder, or have any agency in the management of the institution; that it should not be bound to make loans to the government, nor have power to suspend specie payments." After much debate and division, the bill was amended so as to embrace the above propositions of Mr. Calhoun; and the capital was reduced to 30,000,000 dollars. The bill thus amended did not meet the approbation of the treasury department, nor that of a majority of the house, and was negatived.

"Soon after this, a bill for a national bank, in accordance with the plan proposed by the secretary of the treasury, was passed by the senate, and sent to the house. This bill contained a clause empowering the bank to suspend specie payments, in case, during the war, or one year after, there should be such a demand for gold and silver, as to 'induce a reasonable and probable belief' that it was intended to be exported, so as to endanger the specie capital of the bank, and of the country; or to be *wilfully* withdrawn from circulation, so as to embarrass, obstruct, and discredit the pecuniary transactions of the people and the government, as well as the bank itself; or should be demanded in consequence of a *ruifal* accumulation of bills of the bank, with the intention of destroying the credit of the institution. The president of the United States was to have power to direct the bank to resume, or continue to suspend specie payments, as he might deem expedient."—*Pittin*.

The details of this bill again became subjects of serious debate in the house, and every attempt to amend the bill, so as to make it a specie paying bank, was unsuccessful.

On the third reading, a motion was made by Mr. Webster "To recommit the bill to a select committee, with special instructions, to amend it by reducing the capital to 25,000,000 dollars, by striking out the provisions allowing the bank to suspend specie payments, making it obligatory on the bank to lend money to the government, and prohibiting it from selling its stock during the war." In support of this motion, Mr. Webster pointed out the defects of the bill, as it came from the Senate, and the ill effects it must necessarily have on the credit and currency of the country, with great force of argument, and with not a little sarcastic severity. "The loan of thirty millions," said Mr. Webster, "can only be made by an immediate issue of bills to that amount. If these bills should return, the bank will not be able to pay them. This is certain; and to remedy this inconvenience, power is given to the directors, by the act, to suspend, at their own discretion, the payment of their notes, until the president of the United States shall otherwise order. The president will give no such order, because the necessities of government will compel it to draw on the bank till the bank becomes as necessitous as itself. Indeed, whatever orders may be given or withheld, it will be utterly impossible for the bank to pay its notes. No such thing is expected from it. The first note it issues will be dishonoured on its return, and yet it will continue to pour out its paper, so long as the government can apply it, in any degree, to its purposes.

"What sort of an institution is this?" Mr. Webster asked; "it looks less like a bank than a department of government. It will be properly the paper money department. Its capital is government debts; the amount of its issues will depend on government necessities; government, in effect, absolves itself from its own debts to the bank,

and, by way of compensation, absolves the bank from its own contracts with others. This, indeed, is a wonderful scheme of finance. The government is to grow rich, because it is to borrow without obligation of repaying; and is to borrow of a bank, which issues paper, without liability to redeem it. If this bank, like other institutions which dull and plodding common sense has created, were to pay its debts, it must have some limits to its issues of paper; therefore, there would be a point beyond which it could not make loans to government. This would fall short of the wishes of the contrivers of this system. They provide for an unlimited issue of paper in entire exemption from payment. They found the bank, in the first place, on the discredit of government, and then hope to enrich government out of the insolvency of their bank. With them, poverty itself is the main source of supply, and bankruptcy a mine of inexhaustible treasure. They rely, not in the ability of the bank, but in its beggary; not in gold and silver collected in its vaults, to pay its debts and fulfil its promises, but in its locks and bars, provided by statute, to fasten its doors against the solicitations and clamours of importunate creditors. Such an institution, they flatter themselves, will not only be able to sustain itself, but buoy up the sinking credit of the government. A bank, which does not pay, is to guarantee the engagements of a government which does not pay! John Doe is to become security for Richard Roe. Thus, the empty vaults of the treasury are to be filled from the equally empty vaults of the bank; and the ingenious invention of a *partnership of insolvents*, is to restore and re-establish the *credit* of both.*

The house divided, and the votes were eighty-one in the affirmative and eighty in the negative. The speaker, being opposed to the bill, gave his vote in the negative: the votes being equal, the bill was lost.

The bill was reconsidered the next day, and referred to a select committee, who soon after reported the same, with amendments, reducing the capital to 30,000,000 dollars, to consist of 5,000,000 dollars in specie, 15,000,000 dollars in treasury notes, and 10,000,000 dollars in stock of the United States, issued since the declaration of war; with a reservation of a right in the United States to subscribe an additional 5,000,000 dollars, payable in four per cent stock. Other amendments were also proposed by the committee, particularly by striking out the clauses relating to a compulsory loan, and the power of suspending specie payments. These amendments were substantially agreed to in the house, and the bill was passed by a large majority, 120 to 37; and was finally concurred in by the senate.

This bill was returned by the president, with his objections, not founded upon the question of constitutional power—a question which the president expressly waived, as being *fully settled*; but because, in his opinion, it was not calculated “to answer the purposes of reviving public credit, of providing a national medium of circulation, and of aiding the treasury, by facilitating the indispensable anticipations of the revenue, and by affording to the public more durable loans.” The bill, not being *repassed* by two-thirds of the senate to which it was returned, did not become a law.* A national bank, how-

* In order to meet the expenses of carrying on the war, Mr. Jefferson recommended the issue, on the part of the government, of 200,000,000 dollars of paper money! Mr. Wharton, of Pennsylvania, in an ably written article on “Banking,” observes:—“The suggestion of Mr. Jefferson was not adopted, but the principles involved in his scheme, namely, to carry on the war without disturbing the popularity of the administration, by the imposition of direct taxes—were attempted to be put in operation by the proposed establishment of a national bank. ‘A bill,’ says Mr. Gouge, in his excellent work, ‘A History of Paper Money and Banking,’ ‘was got up in the senate to establish a bank with a capital of 50,000,000 dollars, of which 5,000,000 dollars were to be paid in coin, 15,000,000 dollars in six per cent stock, 20,000,000 dollars in treasury notes, and 10,000,000 dollars to be subscribed by government. In one paragraph, it was declared ‘the said corporation shall be bound to lend the government, reimbursable at their pleasure, 30,000,000 dollars;’ and in another paragraph, it was expressly provided, that ‘until the first Monday in April, 1816, it shall not be obligatory on said corporation to pay its notes in specie.’ Authority was also given to Congress to authorise, in certain contingencies, ‘the suspension of specie payments, for such time or times as they may deem proper.’

This bill, it was observed, “which would have done honour to the repudiating legislation of Mississippi, or to the non-paying state of Pennsylvania,” was passed, on the 13th of July, 1815, in the senate of the United States, by a vote of eighteen to sixteen.

ever, seemed the only resource left to restore public credit, and enable government to prosecute the war; the senate, therefore, immediately passed another bill, in accord-

"This scheme of paying the debts and the current expenditures of the government, not by means of taxation, but by incurring new liabilities—founded as it was on unsound principles of currency and banking, and still more unsound principles of morals—is thus forcibly characterised by Mr. Webster, at that day if not a leading member of Congress, certainly one of the most able of them:—

"From this miserably conceived, but plausible and popular scheme, founded on reasonings alike repugnant to the principles of currency, of banking, and finance; to the conclusions of common sense, and the dictates of common honesty, so happily exposed to the contempt, ridicule, and reprobation of the world; the country was only saved by the reception of news of peace with Great Britain, while the bill was on its passage through the lower branch of Congress. 'In the timely arrival of that intelligence,' says Mr. Gouge, 'we must attribute the delivery of the country from the curse of a national paper currency. If Mr. Madison, and the gentlemen of his cabinet, had been allowed to take their own way, we should have had a national bank with a paper capital of 50,000,000 dollars, issuing notes—redeemable in paper.'

"The unsound and immoral principles embraced in this plan of a bank contrived under the administration of Mr. Madison, and while Mr. Dallas was at the head of the treasury; a man wholly ignorant, as his writings and his conduct have shown, of the principles of currency and finance; or careless, if not thus ignorant of the mischievous consequences of his scheme; are similar to those on which the legislature of Pennsylvania acted, at the gratuitous suspension of specie payments in that state, in 1839. The banks of Pennsylvania were enabled, by an application to the legislature, to continue in a state of suspension, and, by so doing, to defraud their creditors; on the condition that the state, which was deeply in debt and in discredit, should have the privilege of defrauding the shareholders of the banks, by exchanging its almost worthless certificates of state debt, for the paper issues of those banks; for bank notes which, though unredeemable in coin, and depreciated, could be forced, as good money, on the creditors of the state, and on the people of other states.

"In such a dishonest and foolish copartnership, both parties, however, suffered. The banks have lost nearly all their capitals, while the debt of the state has risen since the suspension of 1839, from about 30,000,000 dollars to upwards of 40,000,000 dollars, and it is now accumulating at a rate which will double its present amount in less than ten years.

"So in respect to the operative effects of the financial principles laid down in the scheme of Mr. Madison and his cabinet. If it had prevailed, and the war expenditure been continued for a few years more, on the war scale of expenses; the national debt, at the termination of the war, instead of being 130,000,000 dollars, would have been five times, and perhaps ten times, that amount. It would, in any event, have required such a burdensome rate of taxation, direct, as well as indirect, as this nation have no practical knowledge of, and which might have made the doctrine of repudiation—or, at any rate, the doctrine of nonpayment of debt—as acceptable and popular in Congress and out of Congress, as both of them now are in some five or six or more members of the confederation.

"Of the debt incurred during the war with Great Britain, full one-fourth of it was the effect of our paper currency. From its great depreciation, the government was robbed of a considerable portion of its revenue, the taxes and duties having been paid, as they will always be in all such cases, in the cheapest circulating medium, namely, in those bank-notes which are the most depreciated in value. Secondly, their borrowings upon issues of stock certificates and treasury notes were received in the most depreciated notes in circulation, while the debt of 130,000,000 dollars was, after the conclusion of the war, paid in a sound and honest currency of the present standard value.

"But enormous as have been the direct and immediate expenses of the wars of Great Britain and of this country, considering their short duration—the indirect, collateral and remote pecuniary consequences, connected with wars and consequent upon them—have been much greater, and more burdensome; to say nothing of the political and moral evils, infinitely more destructive of the virtue and happiness of mankind, than can arise from any amount of pecuniary injuries which wars have ever occasioned.

"Of the economical effects of the wars referred to, between all our navigating and commercial competitors—in which this nation only participated for a short time—upon the production and consumption of one of our greatest staples, cotton—we shall, in the succeeding number, produce facts that will demonstrate the truth of our assertion—a truth which it is important to have sustained, admitted, believed, and felt—and what is that truth? Why, that the general, the great, the universal interests of this nation, and of other nations—limited even to the mere and mean consideration of pecuniary thrift—mean in comparison with other and higher considerations—are best promoted by a continuance of peace; of peace not merely between this country and other countries—but a peace among all the nations of the earth."—*Letters to Cotton Manufacturers.*

ance with the views of the secretary of the treasury; and which was sent to the house on the 13th of February, 1815, and would, according to Mr. Pitkin, have then passed, but for the arrival of the news of peace with England. "At the very moment when the question was to be taken on the passage of the bill, the mail arrived from New York, bringing a letter to one of the members, put in as the mail was closing, informing him that a rumour had just reached the city of a vessel's being at the Hook, bringing news of peace. The house, apprised of this, immediately adjourned without taking the question; and the next day the news being confirmed, the bill itself, on motion of Mr. Lowndes, was postponed indefinitely; and the subject of a bank was no further agitated during the remaining short period of the session."—*Pitkin*.

Mr. Wharton, of Pennsylvania, author of several articles on commercial legislation, observes with reference to the chartering (in 1816), of the new bank of the United States—

"Congress met on the 4th of December, 1815, and while, by the great body of the people, the relief to be experienced from legislation was rated at the highest pitch, the legislature itself entered into the field with an ardour and enthusiasm unprecedented since the formation of the government. The return of peace had produced a buoyancy in the hearts of the great mass of the population, which is only to be compared with that experienced by a crowd of boys, who, on a bright March morning, throw open the windows of their school-room, and discover that the frost has already begun to loosen its nets from the face of the earth. Men looked northwards, and southwards, and westwards, at the great and fertile tracts which had just been reclaimed from the hazards of border war; and, as the want of the ancient mechanist had been once supplied—as a base had been discovered on which should rest the lever by which a world could be moved, the only thing remaining was, that the lever itself should be constructed. The capitol was looked up to as the necessary shop from whence the machinery should issue. By Congress a bank must be chartered, whose influence should counteract the costiveness which had impeded the monetary circulation. To Congress was committed the task of removing, on the one hand, the national debt, and of cancelling, on the other, the existing taxes. Through Congress, not only the desolation which had followed a protracted war was to be remedied, but fresh and permanent springs of prosperity were to be opened. That wise and equal trust in personal industry and personal honesty, by which alone permanent prosperity can be insured, was forgotten, and the people rushed to the legislature for the production of a panacea which should restore the drooping energies of the land and multiply its resources.

"The tone and bearing of the new Congress was calculated to promote the popular expectation. The old lines of party demarcation vanished, and each interest, no longer checked by past professions or personal experience, was willing to enter with the fullest enthusiasm into the new plans of national aggrandisement. The old party leaders had retired from the stage, and in their place was found a generation who had known them not. There were but few members of either house who could date their legislative history to the days of the first president, and among them Mr. Rufus King, in the senate, and Mr. Randolph, in the house, were the only men whose parliamentary abilities equalled their parliamentary experience. The demolition of the federal party during Mr. Jefferson's administration, and the war enthusiasm under Mr. Madison, had gone a great way to destroy, in the minds of the statesmen who then rose into action, those restraints which party discipline or hereditary prejudice might have created. When we look over the votes of the thirteenth and fourteenth congresses, we are surprised to find that the old party landmarks are reversed, and that the nominal federalists are discovered battling against measures once deemed instinct with federalism, while the nominal democrats give their earnest support to plans at which the father of democracy shuddered. There was, in fact, a broad and defined boundary line between the statesmen of the revolutionary war, and those of the war of 1812. Ordinarily, the texture of the legislature preserves an aspect of uniformity from session to session, from the fact that though changes take place, they take place gradually, and that though new members must necessarily

arise, they appear, like fresh strands woven into a rope at intervals, so divided as to preserve unbroken the continuity of the series. But, at the time of the late war, the capitol received an instalment of young legislators, all of them about the same age, and most of them endowed with great ability."

On the 6th of December, 1816, a motion was made and agreed to, "that so much of the president's message as related to a uniform national currency be referred to a select committee; and it was ordered that Mr. Calhoun, of South Carolina, Mr. Macon, of North Carolina (who soon after was removed to the senate) Mr. Pleasants, of Virginia, Mr. Hopkinson, of Pennsylvania, Mr. Robertson, of Louisiana, Mr. Tucker, of Virginia, and Mr. Pickering, of Massachusetts, be the said committee. To their charge was committed the following passage from Mr. Madison's message:—

"The arrangements of the finances, with a view to the receipts and expenditures of a permanent peace establishment, will necessarily enter into the deliberations of Congress during the present session. It is true, that the improved condition of the public revenue will not only afford the means of maintaining the faith of the government with its creditors inviolate, and of prosecuting successfully the measures of the most liberal policy, but will also justify an immediate alleviation of the burdens imposed by the necessities of the war. It is, however, essential to every modification of the finances, that the benefits of a uniform national currency should be restored to the community. The absence of the precious metals will, it is believed, be a temporary evil; but, until they can again be rendered the general medium of exchange, it devolves on the wisdom of Congress to provide a substitute, which shall equally engage the confidence and accommodate the wants of the citizens throughout the union. If the operation of the state banks cannot produce this result, the probable operation of a national bank will merit consideration; and if neither of these expedients be deemed effectual, it may become necessary to ascertain the terms upon which the notes of the government (no longer required as an instrument of credit) shall be issued, upon motives of general policy, as a common medium of circulation."

On December 25, 1815, Mr. Calhoun, as chairman of the bank committee, received from the secretary a letter both long and elaborate, presenting a scheme for a national bank, which was reported without amendment to the house, and of which the following is an abstract:—

I. *The charter of the bank.*—1. To continue twenty-one years.

2. To be exclusive.

II. *The capital of the bank.*—1. To be 35,000,000 dollars at present.

2. To be augmented by Congress to 50,000,000 dollars, and the additional sum to be distributed among the several states.

3. To be divided into 350,000 shares of 100 dollars each, on the capital of 35,000,000 dollars; and to be subscribed—

By the United States, one-fifth, or 70,000 shares	7,000,000
By corporations and individuals, four-fifths, or 280,000 shares	28,000,000

Total	35,000,000
-------	------------

4. To be compounded of public debt, and of gold and silver, as to the subscriptions of corporations and individuals, in the proportions—

Of funded debt, three-fourths, equal to	21,000,000
Of gold and silver, one-fourth, equal to	7,000,000

Total	28,000,000
-------	------------

The subscriptions of 6 per cent stock to be at par.

The subscriptions of 3 per cent stock to be at 56 per cent.

The subscriptions of 7 per cent stock to be at 106.51 per cent.

5. The subscriptions in public debt may be discharged at pleasure by the government, at the rate at which it is subscribed.

6. The subscriptions of corporations or individuals to be payable by instalments.

(1.) Specie, at subscribing—	dollars.
On each share, 5-dollars	1,400,000
At six months, 5. dollars	1,400,000
At twelve months, 5 dollars	1,400,000
At eighteen months, 10 dollars	2,800,000

Total	7,000,000
-----------------	-----------

(2.) Public debt, at subscribing—

Each share, 25 dollars	7,000,000
At six months, 25 dollars	7,000,000
At twelve months, 25 dollars	7,000,000

Total	21,000,000
-----------------	------------

7. The subscriptions of the United States to be paid in instalments, not extending beyond a period of seven years; the first instalment to be paid at the time of subscribing, and the payments to be made at the pleasure of the government, either in gold and silver; or in 6 per cent stock, redeemable at the pleasure of the government; or in treasury notes, not fundable nor bearing interest, nor payable at a particular time; but receivable in all payments to the bank, with a right on the part of the bank to re-issue the treasury notes so paid, from time to time, until they are discharged by payments to the government.

8. The bank shall be at liberty to sell the stock portion of its capital, to an amount not exceeding —, in any one year; but, if the sales are intended to be effected in the United States, notice thereof shall be given to the secretary of the treasury, that the commissioners of the sinking fund may, if they please, become the purchasers at the market price, not exceeding par.

III. *The government of the bank.*—1. The bank shall be established at Philadelphia, with power to erect branches, or to employ state banks as branches, elsewhere.

2. There shall be twenty-five directors for the bank at Philadelphia, and thirteen directors for each of the branches, where branches are erected, with the usual description and number of officers.

3. The president of the United States, with the advice and consent of the senate, shall annually appoint five as the directors of the bank at Philadelphia.

4. The qualified stockholders shall annually elect twenty of the directors of the bank at Philadelphia, but a portion of the directors shall be changed at every annual election, upon the principle of rotation.

5. The directors of the bank at Philadelphia shall, annually, at their first meeting after their election, choose one of the five directors appointed by the president and senate of the United States to be president of the bank; and the president of the bank shall always be re-eligible if re-appointed.

6. The directors of the bank at Philadelphia shall annually appoint thirteen directors for each of the branches, where branches are erected, and shall transmit a list of the persons appointed to the secretary of the treasury.

7. The secretary of the treasury, with the approbation of the president of the United States, shall annually designate, from the list of the branch directors, the person to be the president of the respective branches.

8. None but resident citizens of the United States shall be directors of the bank or its branches.

9. The stockholders may vote for directors in person or by proxy; but no stockholder, who is not resident within the United States at the time of election, shall vote by

proxy; nor shall any one vote as proxy a greater number of votes than he would be entitled to vote in his own right, according to a scale of voting, to be graduated by the number of shares which the voters respectively hold.

10. The bank and its several branches, or the state banks employed as branches, shall furnish the officer at the head of the treasury department with statements of their officers, in such form and at such periods as shall be required.

IV. *The privileges and duties of the bank.*—1. The bank shall enjoy the usual privileges, and be subject to the usual restrictions of a body corporate and politic, instituted for such purposes, and the forgery of its notes shall be made penal.

2. The notes of the bank shall be receivable in all payments to the United States, unless Congress shall hereafter otherwise provide by law.

3. The bank and its branches, and state banks employed as branches, shall give the necessary aid and facility to the treasury for transferring the public funds from place to place, and for making payments to the public creditors, without charging commissions, or claiming allowances on account of differences of exchange, &c.

V. *The organisation and operation of the bank.*—1. Subscriptions to be opened with as little delay as possible, and at as few places as shall be deemed just and convenient. The commissioners may be named in the act, or appointed by the president.

2. The bank to be organised, and commence its operations in specie as soon as the sum of 1,400,000 dollars has been actually received from the subscribers in gold and silver.

3. The bank shall not at any time suspend its specie payments, unless the same shall be previously authorised by Congress, if in session, or by the President of the United States, if Congress be not in session. In the latter case the suspension shall continue six weeks after the meeting of Congress, and no longer, unless authorised by law.

VI. *The bonus for the charter of the bank.*—The subscribers shall pay a premium to the government for its charter. Estimating the profits of the bank from the probable advance in the value of its stock and the result of its business, when in full operation, at seven per cent, a bonus of 1,500,000, payable in equal instalments of two, three, and four years after the bank commences its operations, might, under all circumstances, be considered as about four per cent upon its capital, and would contribute a reasonable premium.

On Mr. Calhoun, as the chairman of the bank committee, did the duty devolve of presenting the charter to the house, and supporting it after it was presented. Mr. Calhoun, though not much beyond thirty years of age, had been present, and had taken an active part in the house during the two preceding sessions; and from his great ability, his boldness, his freedom from those points of offence which so often detract from the power of a parliamentary leader, he had been selected by the administration as its organ, not only on the bank question, but upon most of the remaining points to which the attention of Congress was directed.

There were objections to the bill urged, at the time, with great force. It was maintained that the establishment of the bank would in no degree facilitate exchanges. "Supposing that the paper of any one particular bank, state, or town, was fifteen per cent below par, and that it was necessary to purchase exchange on a distant point, it was deducible, from actual calculation, that to buy at once a draft on the place to be reached would cost no more than to exchange the depreciated paper into the notes of the national institution. In either case the fifteen per cent depreciation was to be overcome; and since the bank did not lessen the difficulty, the argument in its favour, drawn from exchange operations, was of no value."

It was agreed also, "that great danger would accrue from the want of responsibility of both president and directors. Great sums of money would constantly ebb and flow through their hands, and it was to be feared lest, by those temptations which in the strain of mercantile vicissitudes were presented, facilities so great might be abused. It was suggested that the directors should be salaried, and be made responsible; but so anxious was the house to pass a bill which would be acceptable to the new stockholders, that the proposition found little support. As the discussion progressed, however the doubts felt by a few at first began to be more generally entertained, and the

large minority which was found against the bill on its passage, exhibited the great reluctance of even the administration members to adopt in full the administration scheme.

"It was argued, in the third place, that all that the country wanted was to be left alone, and that it was most unwise to fasten upon her, for twenty-five years, a measure which was meant, and constructed to meet, a temporary emergency. The great exertions which the war had induced, had been succeeded by a state of lassitude and exhaustion; but was it just to suppose that such a state would continue, and to frame a system of stimulants, which must be used not only for the present, but for the future? If the country wants to be lifted up, apply the proper machinery for the purpose; but do not, after she is once upright, subject her to a continual upward strain. In the words of Mr. Hopkinson, 'In this young nation, with its vast resources and solid wealth, the remedies would come of themselves, in a great degree, if we have patience to wait for them.' The best policy, in such a case, is to let alone; to legislate, at all events, for the present and not for the future, and to trust much more to the active and permanent exertions of the people themselves, than to the insubstantial labours of their legislature."

On the appearance of the bill in the house, it was saluted by a series of amendments, the most of which were unsuccessful, and the bill was finally carried, and the charter signed by the president on the 10th of April, 1816.

The bank of the United States did not immediately commence business. It was considered necessary first to provide for the disordered state of the currency, and against future depreciations. A special agent was sent to Europe to contract for specie, 7,311,750 dollars value of which was, between July, 1817, and December, 1818, imported into the United States for the use of the national bank, at an expense of 525,277 dollars. Mr. Pitkin observes that—

"In addition to this expense, during the year 1817—18, a scheme of stock-jobbing was devised and carried on in the shares of the bank, highly injurious to the bank itself, as well as the public, in which some of the directors, and even some of those appointed by the government, were concerned.

"In this scheme, a large amount of the money of the bank was used, being loaned to those concerned in it, on pledges of the very stock purchased with the loan, at 125 dollars per share. In consequence of these profligate speculations, the price of shares, about the 1st of September, 1817, rose to 156½ dollars. The bubble, however, at last burst, and, in December, 1818, the price fell to 110 dollars per share.

"In consequence of this mismanagement, the bank lost between two and three millions of dollars; the loss at the office at Baltimore alone, amounted to 1,671,221 dollars; and the bank was unable for a long time to make dividends.

"On a change in its direction and presidency, the bank gradually recovered from its losses, and has since been managed in a manner, not only highly beneficial to the government, but greatly conducive to the interest of the community at large. In the course of sixteen years; this institution has collected and received in its vaults public money, to the amount of from three to four hundred millions of dollars; and this vast amount it has disbursed and distributed through the United States, in the payment, not only of the various ordinary expenses of the government, but the interest and principal of the public debt, and the numerous government pensions, &c.; and this has been done without the loss or expense of a single dollar to the government. It has also aided the government by temporary loans; and in this way, in one instance, saved the public credit. A large instalment, being the balance of the Louisiana debt, became due on the 21st of October, 1820, and was previously advertised to be paid on that day; but, in consequence of an unexpected defalcation in the receipts of the revenue, the funds of the government were insufficient to meet so large a payment. In this situation, the treasury department made application to the bank, stating that it 'had not the means of paying the balance,' at the time specified, and requesting it to 'advance the amount to the holders of the stock, or their agents, in such a manner as to save the public credit, and to satisfy the holders.

This statement being considered highly satisfactory, the funds of individuals as well as of the government, continued to be intrusted to the national bank; and the price of its stock was a proof of the confidence in its condition and management. In loans and discounts, by the actual distribution and application of its capital, the southern and western states, that is, the states south and west of Philadelphia, had received an amount exceeding 43,000,000 dollars, in May of 1832, which were then in circulation. In the states bordering upon the Mississippi and its valleys and streams, it had exceeded 30,000,000 dollars, of which, nineteen or twenty were in discounting promissory notes, and the remainder was composed of discounts of bills of exchange, foreign and domestic.* President Jackson, in his message, December, 1832, not only called in question the constitutionality and expediency of the bank, but also its solvency. In 1833, the treasury withdrew from the bank 8,000,000 dollars, within a fraction. The national bank and the state banks curtailed, at the same time, the amount of credit upon which the business of the country was carried on. Property declined in value. Innumerable failures occurred in consequence of the want of bank accommodations. Those which stood, maintained their credit only by enormous sacrifices. Public works and private enterprises were arrested. The means of labour were cut off from those who most required it, and a general pecuniary distress seemed to pervade the country.

"When it was finally settled," observes Mr. Lawrence, in an article on banking in the United States (1844), "that no re-charter of the national bank was to be obtained, a plan was projected to combine the advantages of the long established correspondence, name, and machinery of the former bank, by incorporating its stock with a new institution, under the name of 'The President, Directors, and Company of the Bank of the United States of Pennsylvania,' which was chartered on the 18th of February, 1836, by the legislature of that state. The transfer of the funds of the old institution was made into the new state bank.† More than fifteen per cent was restored to the government, beyond its subscription, at the period of the transfer; and three and a half per cent had been paid to the treasury every six months, for a long course of years. In consequence of the advantages to be derived from the new state institution, the stockholders were content to subscribe anew in the state bank; and it is alleged that all of them might, at this juncture, have received their investments back, not only at par, but with a large advance. This the government actually did; and no power was possessed by the government, that was not equally enjoyed by every individual. Indeed, it was alleged by Mr. Nicholas Biddle (who had held the administration of the affairs of the state bank, as he had done that of the national bank, as recently as April, 1841, that the state

* Pitkins's Statistics—Webster's Speeches; vol. ii., p. 100.

† Mr. Pitkins observes: "The removal of the public deposits, from the vaults of the bank of the United States, produced a general distrust and want of confidence, not only in the moneyed concerns of the banks, but of individuals; and for a time occasioned such a derangement of the great money transactions, in their infinite ramifications, as to cause great pecuniary distress, throughout this extensive country. To a superficial observer, the cause appeared inadequate to the effect; not so, to those who had observed similar effects, even from slighter causes, in commercial countries, where credit was the basis of their various moneyed operations.

"Had the Chancellor of the Exchequer, in Great Britain, by royal mandate, removed the public money from the vaults of the Bank of England, who can doubt, that it would have produced, for a time in that country, such a distrust, panic, and pecuniary distress, as it had never before experienced."—p. 457.

institution was prosperous down to the end of his administration in March, 1839. The downfall of the state institution, however, soon occurred, bringing disaster upon a large circle of stockholders who had intrusted their funds to its keeping. Without entering into a consideration of the particular causes of that event, it may be remarked that the period in which it occurred was a crisis bringing disaster upon the greater part of the stocks throughout the country; and it is believed that its fall arose out of causes which had not acted upon the national bank. From March, 1839, to March, 1841, the stock of the state bank declined from 116 to seventeen per cent; and this loss fell in considerable part upon those who had been the original stockholders of the bank of the United States, from which this was created. But that new institution did not rest upon the broad foundation of national aid; it was not backed by the national confidence; it had a more local and a narrow basis, and it is believed by many judicious and honest minds, that the facts to which we have alluded, were among the principal causes of its downfall."

We do not propose here to enter into a discussion of the various projects that have been urged on the one side and the other for or against a national bank. Since the expiration of the last national bank, in 1836, a bank charter, which passed both houses of Congress, was vetoed by President Jackson; and another bank bill, passed by both houses, was presented to and vetoed by President Tyler. The question, however, of a national bank and the tariff have been the source of more party discussion, of late years, than any subject. In regard to the general principles which should regulate the emission of bank paper, Mr. Webster, in June, 1844, in a speech delivered at Trenton, expressed the following opinions:—

"There are dangers and evils, as well as benefits and advantages, in that mixed circulation of coin and paper which now exists among us. That that mixed circulation will continue, seems certain. That far the greater part will consist of paper, until there shall come another day of disaster to the banks, seems certain, also. That this circulation, in its present state, while the banks which issue paper are solvent, and do not issue it in excess, is convenient, and as beneficial as any local circulation can be, may be also admitted. But neither of these things is more certain than that danger hangs round the system, calling for care and discretion, oversight and watchfulness from the government, or in the absence of the exercise of any powers of the government, from the banks themselves, and from the community. I have ever been and still am of opinion that this guardianship and superintendence of the currency, is one of the constitutional, appropriate, and necessary exercises of the authority of the national government. But that point I do not now propose to argue, or to touch. But I wish to state what I consider the danger to be, and whence it arises, to the end that the country may not be led to forget the existence of that danger, although it be not, at the present moment, standing in an appalling attitude before us.

"Gold and silver are the universal standard of value, and medium of payments, among all civilised nations. All the coin in the world belongs to all the commercial nations in the world, each having naturally a share of it, proportioned to its commercial business and use. If bills of exchange were unknown, then coin would exchange hands from country to country, in order to pay debts and settle balances, as the course of trade should have created such balance, on the one side or the other. Coin is the universal solvent of commercial balances, the general paymaster, whose office it is to square accounts, arising from the interchange of commodities. If produce exported becomes debtor to produce imported, coin must pay the difference; and where exports throw a credit over import, coin returns to adjust the accounts. All this is as simple, in the order of things, as is the proceeding of a farmer, who goes to the market town, with the produce of his farm, and with money in his pocket, if he wishes to buy more than he has to sell, or bringing home more money, if his sale exceed his purchases.

"But in the intercourse of nations, there are things which affect the simplicity of this proceeding, and render it a little more complicated, without changing its nature. The use of bills of exchange is universal. Bills of exchange prevent, in a very great degree, in a settled state of trade, the actual transmission of coin from country to country. They run the round of the whole mercantile world, bringing nations to a settlement, each one with all the rest, one paying its debts to another, by drawing on its funds in the hands of a third, and leaving coin to be called for, only where balances of debt are considerable, or appear to be accumulating at some one point. London may be regarded as the centre of exchanges for Europe, and the city of New York, for this country; Paris, Hamburg, and Amsterdam being auxiliaries to London; and Boston, Philadelphia, Baltimore, Mobile, and New Orleans, auxiliaries to New York.

"The state of exchange, then, at any time, between New York and London, shows substantially the state of trade, in the aggregate, between this country and Europe, and the balances actually existing, or soon to arise, on the one side or the other. Speculations founded on calculations respecting future events, such as the probable amount of the staple articles, for the year, or the results of manufacturing industry, the probable rise or fall of prices, and other such things, affect, to a certain degree, the actual rate at which bills of exchange are bought and sold, and thus qualify that which would otherwise be the mere result of facts, with more or less of the influence of opinion. Still, the general and the safe index of the state of trade is the state of the exchanges.

"To an accurate understanding of the subject, however, it is necessary to bear in mind that the nominal exchange between the United States and England does not correspond with the real commercial exchange; by reason of the difference which the laws of the two countries have established in regard to the value of gold, and of the incorrect estimate, usually made here, in the business of exchange, of the value of the pound sterling. In exchange the pound sterling is received at 4 dollars, 44 cents; its real value may be put at 4 dollars 80 cents, and so the laws of Congress regard it. This difference amounts to eight per cent. So that when a bill of exchange is bought in New York, payable in London, in sterling money, if the premium given for it do not exceed eight per cent, it is really purchased at about par; and in this state of exchanges there is no danger of the export of specie.

"Gold and silver, as I have already said, constitute the standard of value, and medium of payment among nations. The same is true, in effect, in domestic trade, and among individuals. But here comes in the modern use of bank paper as the representative of gold and silver, which supplies the place of coin, and almost supersedes it in domestic transactions. Most commercial countries authorise the circulation of paper, and this circulation is greater or less, according to circumstances, and to the habits of the people. In the United States and England it is large, in France it is less.

"I am not now speaking of government securities, irredeemable treasury notes, or any thing of that kind; I am speaking of bank notes, promising payment in specie on demand, and circulating as cash. In the United States such bank notes are issued by many hundred different banks. They pass from hand to hand, as money, and little gold and silver is seen in the daily business of life. This state of things is convenient, so far as local circulations are concerned, and while the use of paper is restrained within just limits. But then comes the question, what are the just limits, and who is to preserve them? What is the standard by which we are to decide the question of excess, or no excess? and who is to support the standard?

"Is there, or is there not, or may there be, or cannot there ever be, excess, so long as the banks are able to redeem their paper? What do we mean by excess, or over issues, or injudicious superabundance of paper?

"To answer these questions, we must remember that the true operation of bank paper is of a representative character. It represents coin. But this representative, like other representatives, sometimes forgets its constituents, and sets itself up to be somebody or something; when of itself, it is nobody, and nothing. The one dollar bill which you have in your pocket is no better than blank paper, except so far as you have confidence that it will, whenever you wish, bring a dollar into your hands.

"A bank note, professing to represent coin, and being a true representative, acts a

respectable part in the drama of commercial affairs; but when it sets up for itself, or offers itself in an independent character, it only 'presents the person of moonshine.' The security of paper, first against the insolvency of banks, and secondly against the general evil of over-issues and inflated circulation, consists in maintaining a just and direct relation between the amount of paper and the gold and silver which it represents. I do not, of course, say a relation of equality, but a just relation, and a direct relation. In other words, I mean to say that when the course of trade withdraws specie from the country, then the amount of circulating paper should be proportionally diminished.

"Bank notes will not pay foreign debts. Strangers will not trust this representative of coin. They cannot judge of his credentials, and, therefore, demand the presence of the constituent itself. Here, I think, lies one of the great temptations to excessive issues of paper. Then trade is such that balances are rising against us abroad, and the exportation of specie commences. There are those who always desire an enlargement of the paper circulation to supply the deficiency, and to keep up prices. But enlargement of paper issues under such circumstances, is the first step towards a *crisis*, commercial distress and revulsion. The country is full of enterprise. No people have more. Almost every man is active, while, at the same time, and for the same reason, capital is less abundant than in older countries.

"These circumstances keep up a demand for loans and discounts, especially in times of activity; and although it is doubtless true that a well-conducted system of paper circulation may, to some extent, act as expansion of capital, and in that way be useful in a new country, yet men are too apt to delude themselves with the idea that paper is currency.

"But I am now considering mainly, paper currency at home, in its consequences upon importations, and other branches of foreign trade, and a just limit to its, or these discounts.

"An opinion has prevailed, in England, and I suppose still prevails, that it is safe in banks to discount every good bill of exchange or promissory note, which bill or note is business paper, as it is called; that is, if it has been given in a real transaction of buying and selling. This has been, heretofore, the rule with the Bank of England.

"Now, if by this, no more were meant than it might be safe for the bank itself, and so far as its own interests are concerned, to discount all such paper, the proposition might be admitted. Business paper, generally speaking, may be regarded as safe paper. But that all good business paper may be discounted by banks, and the discount paid in bank notes, without danger of injury to the public from an excess in the paper circulation, is a proposition which I do not admit, and which I think of dangerous tendency. I am persuaded that enlightened bank directors, disposed to regard the public good, as well as the interests of their own stockholders, can never act on such a principle.

"It is a fundamental error; and in a country so full of enterprise, and so much disposed to activity as ours, its practical tendency is to stimulate business too highly, to inflate prices unnaturally, to cause overtrading, over production, and over action in all departments of business. It swells the amount of paper beyond its just relation to specie, and exposes the country to sudden revulsions. While specie is departing, to pay debts abroad, it is the effect of this shallow and short-sighted policy to increase the paper circulation at home. How can such a course of things terminate but in disaster and distress?

"We are now just recovering from a deep and long-continued depression. All branches of business give evidence of revival and of healthy action. The danger is that we shall not be content to make haste slowly; that a spirit of speculation may spring out of our state of prosperity when it shall become flushed. The danger is that paper will be issued to excess, prices become extravagant, and the symptoms of crisis be upon us before we are aware. All this may not happen; but the only security that it shall not happen lies in this, viz.:—that bank issues be kept within just bounds, *with direct reference to the amount of gold and silver.*

"Let me illustrate my meaning by a supposed case. Suppose the amount of coin in the banks of New York to be five millions. Suppose them to have issued, in paper, three millions for one, that is to say, fifteen millions. I do not intend to say that this is a just proportion, but it may be assumed, for illustration.

"Now, suppose the holders of one of these fifteen millions demand specie for it, for exportation. Then fourteen millions of paper remain resting on a basis of four millions. If a second million of specie be called for, then thirteen millions of paper rest on three millions of specie, and so on. Now, it is evident that if such a process as this begins, and threatens to go on rapidly without contraction, general distress, and perhaps explosions of the banks themselves, would be the inevitable and immediate consequences.

"This catastrophe, and the tendency of things toward it, is to be guarded against by just restraints upon the amount of discounts, by waiting the course of trade, and observing continually the index of exchange. It is not sufficient guard to look at the supposed responsibility of paper offered for discounts, or to inquire whether it arose in any case from real transactions of sale and purchases. If the exchanges indicate that exportation of specie may be apprehended, more caution is necessary; and when exportation ordinarily commences, it should be met by an immediate and corresponding diminution of the paper circulation. This will slacken that exportation, check it, and finally stop it. The process may be inconvenient for the moment. It may more or less depress prices, and dash men's hopes a little. But it is infinitely better to meet the occurrence by its proper remedy in the beginning, than to attempt to hold up against the natural course of things, to maintain trade in an artificial and forced state, tending every day to a final, ruinous, and overwhelming fall of prices, and to a general prostration of credit.

"That which every branch of industry in this country most needs, is reasonable and steady, not extravagant or fluctuating prices; sudden changes deprive men of employment, and distress families.

"Steady occupation, with reasonable gain, constant markets, with fair prices, with no apprehension of sudden change, and the security which a man feels that that is money which he has taken for money, freedom from alarm and panic, and no fear of disorder or violence; these things compose the elements of general and enduring prosperity among the industrious and producing classes of the community.

"In the present state of things, in the absence of all oversight by government, the continuance of the public prosperity very much depends on the banks themselves. Subject to no control but their own discretion, they ought to feel responsible for the exercise of that discretion.

"The great cities near to us, and other great cities, the sources of a great proportion of bank paper, are jointly called on to guard the country against such evils as it has already more than once experienced.

"There ought to be an understanding among the leading institutions, and a just disposition to discountenance everywhere either extravagant lending or extravagant borrowing. I do not presume to admonish the banks; but I hope they will receive these suggestions as made in a friendly spirit. If discretion and candour in this respect be not exercised, our present state of health will itself bring on disease; our very prosperity will plunge us in disorder. We are well instructed by experience—let us not be lost to experience. Let not all the good, all the comforts, all the blessings, which now seem in prospect for all classes, be blighted, ruined, and destroyed, by running into danger which we may avoid. The rocks before us are all visible—all high out of water. They lift themselves up, covered with the fragments of the awful wrecks and ruin of other times. Let us avoid them. Let the master, and the pilots, and the helmsman, and all the crew, be wide awake, and give the breakers a good berth."

Two prominent parties have arisen in the country, the one advocating the charter of a bank, on the ground that such an institution is constitutional and expedient, and the other opposing it upon opposite grounds. If we trace the political history of the national banks of the country back to the early controversies which have arisen upon the subject of their establishment, we find that the discussions have not always been made strictly party questions. The bank of 1791, as has been seen, was established under the auspices of President Washington, and was at that time deemed by him constitutional. The refusal of Mr. Madison to sign the bank bill of 1811, appears to have been founded in honest doubts as to its expediency, and the bill of 1816 was passed into a law with his approval. The vetoes of some of his successors seemed to have been based upon its alleged in-

expediency and unconstitutionality. It would seem that a solemn decision of the Supreme Court has fully set at rest the constitutionality of a national bank;* but its expediency, of course, must depend upon various considerations connected with its structure and operations.

During the existence of the charter of the late bank of the United States, banks multiplied in the respective states with reckless and fatal rapidity. On the adoption of the constitution of the United States, three state banks only existed, and their aggregate capital amounted to no more than 2,000,000 dollars, about 430,000/. On the 1st of January, 1811, their number had increased to eighty-eight, with an aggregate capital, real or fictitious, of 42,610,000 dollars. Between the 1st of January, 1811, to 1815, 120 new state banks appeared, with a presumed capital of 40,000,000 dollars. The secretary of the treasury, Mr. Crawford, estimated the paper circulation of the country, during the year 1816, at 99,000,000 dollars, and the specie circulation at 11,000,000 dollars, making the whole 110,000,000 dollars. Loans to the government were effected by some of the banks of the middle states during the war; and as those were made, for the most part, in bills, the issues must, through that means, have become greatly increased. The pressure before September, 1814, caused those banks to suspend the payment of specie for their bills.

The rapid depreciation of their bills was the natural consequence. The bills of the bank of Baltimore were at a discount of twenty per cent; those of the banks of the city of New York, of ten per cent; and in January of the following year, the discounts at Baltimore were twenty per cent, and at New York, fifteen per cent. In consequence, the revenue was paid in bills of unequal value, and loans could only with difficulty be procured by the general government. Peace, in February, 1815, restored confidence in the state banks; but they did not resume specie payments. The depreciation of their bills continued. The debts due to the United States, as well as those due for the payment of large importations after the peace, could only be paid in those depreciated bills. Gold and silver, it is true, constituted the only legal tender of payment after the charter of the first bank expired; yet necessity compelled the government and other creditors to receive depreciated bills in the absence of other payment. In consequence of this disordered state of the currency, it was found difficult, by the secretary of the treasury, to make payments in the various parts of the United States; and efforts were accordingly made to unite the state banks in resuming specie payments, but without success. The bills received in the different states in payment of the revenue, were of unequal value. When the United States bank was re-established in 1816, measures were adopted to collect the revenue in the new legal currency of the union; Congress instructed the secretary of the treasury to receive nothing in payment but the legal currency, or treasury notes, or notes of the national bank, or notes of banks that were paid in specie on de-

* *McCulloch v. State of Maryland*, 4 Wheaton, 316.

mand. In 1817, an arrangement was agreed upon between the bank of the United States and the state banks of New York, Philadelphia, Baltimore, and Virginia, which enabled those banks to resume cash payments.

From 1811 to 1830, no less than 165 state banks, possessing an aggregate capital of about 30,000,000 dollars, either failed or discontinued their business; those failures occurring in nearly every state and territory of the union. The treasury had about 1,400,000 dollars deposited within their vaults: the greater portion of which it lost; while the loss to individuals was that of many millions,—the bulk of which fell upon widows and orphans, whose property had been intrusted to those banks. These failures arose in some cases from the multiplication of bank in places where they were not required; from injudicious discounts and over issues; from ignorance of the principles of banking, and the nature and operation of banking institutions; and, in some cases, from a desire of gain, at the expense of individuals and of the public.

Mr. Lee, of Boston, in his letters to cotton manufacturers, where, exposing the reckless banking operations in the United States, makes the following observations:—

“It was about 1832 or 1833, that banks began to be multiplied, not for the purpose of supplying a currency for the country, or of safely and profitably loaning the funds intrusted to them by the stockholders, but to enable, in most cases, their managers, who either had no capital of their own, or an insufficiency of it, to get possession of the capitals of the stockholders. They succeeded in their efforts, and what have been the consequences as respects the shareholders in the 704 to the 901 banks that were in operation from 1835 to 1840? Why, of the aggregate amount of capitals which extended at one period to 358,442,692 dollars, not 200,000,000 dollars now remain, taking the shares of the banks still in existence at par. But would such an estimate be a correct one? Why, even in the city and state of New York, where banks, according to Mr. Gallatin's late pamphlet, have been managed as well as in any of the states, and far better than in most of them, something like a third of the bank capital has been sunk; nor are there many banks in the city or in the state of New York, whose shares will bring par; while in a large majority of them, they will not average 75 cents per 100. The banks in New England, as we apprehend, have not met with much better success, as may be seen by the current prices of their shares, and still more clearly by the actual results of their operations, whenever the stockholders have examined into them.

“The direct loss, however, of more than 200,000,000 dollars by banking, and perhaps 50,000,000 dollars in addition, from depreciation, or from the entire valueless condition of the immense amount of false and fraudulent issues of those banks—fraudulent, because in many cases based on nothing but the false promises borne on the face of them—is as nothing in comparison with the destructive effects of free and unlimited banking, and the free and reckless system of trusting, upon all the great branches of industry, and more especially upon the manufacturing interests of New England, exposed as they are from the manner in which we conduct our sales—to the worst consequences resulting from the action of a vicious system of banking, and its concomitant, an equally vicious system of trusting.

“A currency always tending to redundancy, and usually in that condition or in its opposite one—that of insufficiency—united with a long-credit system, both at the banks and between individuals, as has been the case in this country—must necessarily produce those sudden and extreme variations in the value of money, with all their direct and collateral evils—which have proved so injurious to the whole country, and so utterly ruinous to the most active and useful portion of it—whose stability and success depend

almost entirely on the maintenance of an unfluctuating, *permanent measure of value*—the most important function of money—the currency of a country.”

“For the past twelve months there have been but few failures in Boston, and business has been in a safe if not very prosperous condition; and, consequently, the banks ought to have done a fair if not a prosperous business. The returns, however, to the legislature, down to October, 1842, show an average dividend of only 4 52-100 per cent per annum. But even a portion of that dividend, if one may judge from the low prices of the stocks of some of the banks, may have been made from the capitals of some of the weak banks. And what are the future hopes of the stockholders founded upon—when the loans are now made at four or five per cent per annum, on capitals subject to from one and a half to two per cent charges, superadded to bad debts, which they can hardly expect to escape when the next revulsion arrives.”—*Letter to Cotton Manufacturers.*

Mr. Lee very forcibly exposes a fallacious argument in favour of the existing monetary system of the United States, and says—

“It may seem superfluous to add, that down to this period of time, notwithstanding what has happened in reference to our pecuniary difficulties, the public have been satisfied of its soundness and its sufficiency—or they would not have continued to endure the system.

“*This country has prospered in a higher degree than any other country.*

“The currency consists almost entirely of paper promises, created without limits by banks, and administered by banks, without control, or without accountability;—therefore the monetary system on which the country has acted, and is now acting, is *the cause of its unexampled prosperity.*

“This is the reasoning process by which the country—by which a nation of 18,000,000 of people claiming more than a common share of general cultivation and knowledge—have been persuaded—perhaps, we may rather say, *led*—not only to tolerate and endure, but to support and encourage a system which, whatever appearances may indicate to the contrary, has been productive of an enormous amount of pecuniary and moral evil.

“That the country has prospered—and that banks and paper promises have existed—are truths too evident to be denied; but the admission of the truth of these assertions does not necessarily imply a belief in the truth of the inference drawn from that admission.

“That the premises of these reasoners are true, it is admitted, but to establish their conclusions upon a sure foundation, it must be shown that what they term *cause*, is any thing more than a mere *coincidence*. This, so far as we have in remembrance the essays of the most ingenious advocates of the system, has never been attempted. They have relied on the ‘*argumentum ad ignorantiam*,’ and the ‘*argumentum ad populum*.’

“The inconclusiveness of the reasonings on the subjects of banking and currency to which reference has been made, may be illustrated by a case where its fallaciousness and absurdity will be made manifest to the most uninformed and the most unreflecting mind.

“The lands bordering on the river Nile, in Egypt, are remarkable for their fertility.

“The pyramids are near the banks of the Nile; consequently, the pyramids *are the cause of the extraordinary fertility of the lands on the borders of that river.*

“Here is an instance where the facts are so notorious, or so accessible—namely, that the extraordinary fertility of the land in question arises—not from the presence of the pyramids, but from the overflowing of the Nile—that no one could be deceived, or long remain ignorant of the true cause of that fertility; consequently, the falsity of the reasoning which attributes the quality of the soil to another cause, is instantly perceived and refuted.

“Nevertheless, in spite of the supposed power of the reasoning faculties over the opinions of men, is there any one who will doubt, after what has been seen in this country, that Mehemet Ali, if he were to summon his followers to a caucus, convention, or to a mass meeting;—is there, we repeat, any doubt that this friend of the people, with

his priests and politicians, if he had any point to carry, favourable to his own views, and prejudicial to the welfare of his subjects, that he could demonstrate to their minds the unreasonableness of attributing the productiveness of the soil to the effects of the river inundations? Is there any doubt—on the supposition that the leading politicians and statesmen of Egypt are as remarkable for their extensive knowledge and their great logical powers, as have been evinced by many of our great men, on the questions of political economy—that the people might be prevailed upon to drain off or fill up the Nile—and to cover the country with pyramids, in order that the whole land might enjoy the fertilising effects which they had shown to have been caused by the pyramids already existing in the vicinity of the Nile?"

To the absolute measures of President Jackson, for they were as much so as if the spirit of Napoleon had directed them, has been imputed the ruin of the bank of the United States. The *prestige* which it possessed in public opinion as the deposit bank of the United States revenue, vanished immediately after the president transferred those deposits to the respective state banks. But its downfall could not be prevented, even by the most skilful management of the most influential, as well as most able of those who wielded the prevailing banking principles of the United States. Mr. Lee, speaking of this remarkable man, says:—

"Perhaps the most influential person in the United States upon the subject of banking is Mr. Nicholas Biddle; and though, from circumstances not necessary to detail, some of the influence and authority formerly exercised by him over the public mind may be diminished, yet the banking principles on which he acted are still those which are acted upon through the country—nor, as we have before said, could that gentleman have retained his station at the head of the United States Bank, had he conducted its concerns on what might justly be considered safe and sound principles of banking.

"If the results of the operations of the United States Bank have been disastrous, so have been those of multitudes of smaller institutions which have not had so many obstacles to overcome and so many causes of embarrassment as a bank with an unwieldy capital and numerous branches—many of which were beyond the control of the parent bank. If the nation had been so unwise as to have established a third bank, with the enormous capital assigned to it in some of the schemes before the public, it is doubtful if the country would have escaped from the evil effects which must always flow from such an institution, without much more ruinous consequences than have been experienced from the mismanagement of the late United States Bank.

"In referring to Mr. N. Biddle's communications we go to the highest authority in the nation in support of the popular system of banking; and it is on his statements and reasons in defence of that system, that the prominent party men have leaned for their facts and arguments. This will readily be perceived to be the case on comparing their essays and speeches with his various writings upon the subject, except in some instances, where Mr. Biddle maintained doctrines in opposition to those which he has of late years advocated."

In a communication dated April, 1838, Mr. Biddle enumerated among other causes of the suspension, and it is the first which he put forward:—"The issuing of the specie circular, which forbade the receipt of any thing but gold and silver at the land offices."—In several of the speeches of Mr. Webster, the specie circular and its effects upon the currency, is the most prominent topic. In a debate upon a motion in the senate of the United States, to rescind the treasury order, on the 21st of December, 1836, Mr. Webster, in referring to the effects of that measure in preventing a flow of coin from the states where the proceeds of the lands were received, made the following remarks:—

"The agricultural state of Indiana, for example, is full of specie; the highly commercial and manufacturing state of Massachusetts is severely drained. In the mean time, the money in Massachusetts cannot be used. It is waiting for the new year. The moment the treasury grasp is let loose from it, it will turn again to the great marts of business; that is to say, the restoration of the natural state of things will begin to correct the evil of arbitrary and artificial financial arrangements. The money will go back to the places where it is wanted," &c. &c.

Mr. Lee denies that the specie circular had any such effects, and says that—

"The state of Indiana is one in which the land sales were made to the largest extent—and on that account it was probably selected by Mr. Webster as containing a considerable portion of that immense amount of coin of which the Atlantic states had been deprived by the specie circular. That document was issued on the 11th of July, 1836, and was to take effect on the 15th of August, succeeding—and consequently it had only been in operation about four months, during which time the coin must have been accumulating from the proceeds of the land sales. The question now is as to the amount of coin on deposit for the account of the government in the state in question. To ascertain that fact, there are no documents to which we can refer; but by an official statement we find that the whole amount of coin in the banks of Indiana, in November, 1836, was 1,204,737 dollars. There are no other returns till May, 1837, when the amount was reduced 1,196,187 dollars. Here, then, is the immense amount of treasure, on the supposition that the whole of it belonged to the government, from which such great relief was counted on by Mr. Webster, had it not been retained in Indiana by the specie circular. But how could even this insignificant sum be spared from the banks of Indiana, or be obtained from them, when their liabilities amounted to 4,709,000 dollars?"

Mr. Lee then describes the condition of the banks of Ohio, Illinois, Michigan, Alabama, Mississippi, and Florida, and then concludes:—

"From banks in such a condition, it would have been impracticable to have withdrawn much of their exhausted supply of coin without causing an immediate suspension. Indeed, the universal suspension of 1837 commenced in that quarter. The banks of New Orleans suspended previously to those of the city of New York—although in a much stronger condition than the New York banks.

"The banks of Louisiana, all of which are situated in New Orleans, were under liabilities, in May, 1837, to the amount of 16,739,689 dollars, and had reserves of coin amounting to 2,327,851 dollars. The returns from the banks in the state of New York, at the end of May, 1837, show deposits of coin to the amount of 3,033,209 dollars, to sustain their liabilities of 38,862,551 dollars. But the superior prudence exercised by the New Orleans banks, in comparison with those of the state of New York, is more strikingly evinced by a reference to the following statement of their condition four months anterior to the suspension of cash payments:—

BANK RETURNS.	NEW YORK, January 1, 1837.	NEW ORLEANS, January 1, 1837.
	dollars.	dollars.
Bank capital.....	37,101,463	36,760,453
Circulation.....	24,198,000	7,999,788
Deposits.....	30,883,170	11,487,431
Coin.....	6,557,020	3,108,410
Loans.....	79,313,188	59,108,741

"If the banks of New Orleans, which were in a much stronger condition, as far as a reliance can be placed on official returns, than those of New York, could not withstand the pressure upon them, with 2,327,851 dollars of specie in their vaults, how could it be expected that the banks in the inland states, to which we have referred, and that were in no better condition than the New Orleans banks, could withstand a run upon them for all, or for any considerable portion, of their deposits of treasure?"

"The desperate condition of the banks of the four principal commercial cities on the

Atlantic, which we have supposed may have been reinforced by the reception of the whole amount of coin in the states and territories, where the proceeds of lands were collected, will be seen by the following statement. The returns of the Massachusetts banks come down to October, 1836, and of the other banks to 1st of January, 1837 :—

PLACES.	Loans.	Circulation.	Deposits.	Coin.	Capitals.
	dollars.	dollars.	dollars.	dollars.	dollars.
Massachusetts.....	56,043,171	10,892,240	8,784,516	1,455,230	34,478,110
Maryland.....	14,986,487	3,310,835	4,640,477	1,139,347	10,438,055
New York.....	79,313,188	24,198,000	33,883,179	6,553,020	27,101,463
Pennsylvania.....	161,595,662	23,242,082	15,234,650	5,752,439	56,750,338
Total.....	252,938,508	63,643,166	59,742,822	14,904,036	140,768,566

“ Here is an official statement showing the condition of the class of banks, which formerly were considered as being conducted with more skill, prudence, and success, than any of the numerous institutions in the country, and, perhaps, with the exception of the banks in the city of Philadelphia, that was a correct opinion. And the banks of Philadelphia, save the United States Bank, were in no worse a situation than those of the other cities we have named, till after the suspension of 1837, when they became embarrassed by a connexion with the Bank of the United States, and with the state of Pennsylvania, which has proved ruinous to their shareholders. Until that period, we apprehend that the banks in the city of Philadelphia, going back to the origin of banks, were managed with rather more prudence than those of any other city in the union. We believe an investigation into the comparative banking results of every city in the country, will show the correctness of that assertion. As a corroboration of that fact, if it be a fact, we should venture to say, that in no city of the union had the general transactions of business been conducted with more industry, caution, prudence, and probity, and with better results, especially in its great inland commerce, than in Philadelphia. The bankruptcies have been few in comparison with those in most of the great marts of trade, and especially among that portion of its community who are engaged in the regular and staple branches of industry. The losses by failures, we have reason to believe, from long personal experience, and, still more, from inquiries among persons having ample means of judging, to the manufacturers and merchants of New England, on whose account an immense amount is annually sold in Philadelphia, are smaller, in proportion to that amount, than in any other place in the union, not even excepting the capital of Massachusetts.”—*Letters to Cotton Manufacturers.*

In regard to the operation of the United States Bank, in regulating the currency of the country, it has been generally admitted that its affairs were often far less discreetly managed than were those of many local banks. Mr. Appleton says :—

“ The great and difficult problem in a currency of bank paper, is the prevention of those fluctuations to which experience shows such a currency is liable, in a far greater degree than a currency composed wholly of the precious metals.” “ Severe revulsions,” the same writer observes, “ took place in 1826, 1829, and 1832, in which the Bank of the United States took its full share in the expansions which preceded them.”

Mr. Lee remarks—

“ The removal of the public deposits from the United States Bank to the local banks was the reason assigned for the extremely severe pressure in the money market, which existed between the autumn of 1833 and the summer of 1834. The removal of 10,000,000 dollars of the public deposits, rendered it necessary that the United States Bank should contract her loans and liabilities, but such an operation, performed as it was, or which it might have been, upon the previous notice given of such an intended transfer of the public funds, would not have caused any great inconvenience to the trading community, had not the United States Bank been placed in an insecure position by her previous over-issues and excessive loans. This assertion, namely, excessive issues of the United

States Bank, does not rest upon conjecture, but on the official returns of that institution, as will be seen by the following statement :—

RETURNS.	1st of January, 1831.	1st of January, 1832.	1st of January, 1833.	1st of January, 1834.
	dollars.	dollars.	dollars.	dollars.
Loans.....	44,032,057	66,293,707	61,693,913	54,911,461
Circulation.....	16,251,267	21,355,724	17,518,217	19,208,879
Deposits.....	17,207,641	22,761,434	26,347,749	10,838,555
Coin.....	10,808,640	7,638,023	8,571,847	10,031,237

"The sudden and enormous extension of the liabilities and loans of the United States Bank, to the extent of fifty per cent on its loans and thirty-three per cent on its liabilities, within the period of one year, and, as may be seen by returns of the local banks, a somewhat, though a less extravagant, enhancement of their loans and liabilities—placed the currency in such an inflated condition as to have afforded a sufficient cause for the revulsion of 1834. It is true, the removal of the deposits hastened the measure of contraction which was the proximate cause of the pressure of 1834. If, however, the deposits had not been removed, either the contraction must soon have been made, or, by further issues of paper, such a measure would have been found unavoidable at a subsequent period ; or, if otherwise, the universal bankruptcy of the banks which occurred in 1837, would have happened at a somewhat earlier period.

"But the statement we have furnished of the imprudent conduct of the United States Bank, while, according to the views commonly taken of the matter, that institution was regulating the currency and the exchanges of the country ; the facts, we say, which have been adduced, discreditable as they are to the managers of a bank on which the country relied for its restraining power and its conservative principles—as respected the local banks—do not reveal the full extent of the folly and the imprudence of which that institution was guilty.

"The *Regulator*, indeed, so far from performing the office of *regulating* the movements of these banks, was, in truth, a great and efficient *disturber* of their operations, more especially of the banks of New York and Baltimore, and above all the banks of Philadelphia.

"I am aware," says Mr. Van Buren, "it has been urged that this control (over the operations of the local banks), may be best attained and exerted by means of a national bank." The history of the late national bank, through all its mutations, shows that it was not so. On the contrary, it may, after a careful consideration of the subject, be, I think, safely stated, that at every period of banking excess it took the lead ; that in 1817, and 1818, in 1823, in 1831, and in 1834, its vast expansions, followed by distressing contractions, led to those of the state institutions. It swelled and maddened the tides of the banking system, but seldom allayed or safely directed them. At a few periods only was a salutary control exercised, but an eager desire, on the contrary, exhibited for profit in the first place ; and, if afterwards its measures were severe towards other institutions, it was because its own safety compelled it to adopt them. It did not differ from them in principle or in form ; its measures emanated from the same spirit of gain ; it felt the same temptation to over-issues ; it suffered from, and was totally unable to avert, those inevitable laws of trade, by which it was itself affected equally with them ; and at least, on one occasion, at an early day, it was saved only by extraordinary exertions from the same fate that attended the weakest institutions it professed to supervise. In 1837 it failed, equally with others, in redeeming its notes, though the two years allowed by its charter for that purpose had not expired, a large amount of which remains to the present time outstanding. It is true, that having so vast a capital, and strengthened by the use of all the revenues of the government, it possessed more power ; but while it was itself, by that circumstance, freed from the control which all banks require, its paramount object and inducement were left the same—to make the most for its stockholders—not to regulate the currency of the country. Nor has it, as far as we are advised, been found to be greatly otherwise elsewhere. The national character given to the Bank of England has not prevented excessive fluctuations in their currency, and it

proved unable to keep off a suspension of specie payments, which lasted for nearly a quarter of a century."—*Message*, 1839.

"Notwithstanding the existence of these facts, which, however, were not, in 1834, generally known to the public, the monetary difficulties and embarrassments of that period were attributed by politicians, and generally by the mercantile community, wholly to a transfer of about 10,000,000 dollars from the United States Bank to some of the local banks in the places where that institution had its branches.

"But now that the facts are before the public—facts taken from the official returns of the United States Bank, which show its perilous condition previously to, and at the period of the removal of the public deposits—with such evidences, we say, of the folly and imprudence of that institution, it must, we conceive, be admitted by every candid mind, that the main, the effective cause of the monetary and commercial pressure which existed between the autumn of 1833 and the summer of 1834, may be traced to the gross mismanagement of that establishment."—*Letters to Cotton Manufacturers*.

"In spite of the predictions of politicians and of bank managers, who, in most cases, concurred with them, or appeared to concur with them, the exchanges came round, namely, *came into their natural state*, as Mr. Appleton told his readers they would do as soon as cash payments were resumed."

"Here is a comparison between the average returns of the bank for the years 1820, 1821, 1822, and 1823, the period of Mr. Cheves' presidency; and the years 1832 and 1833, the period preceding the monetary and commercial pressure that commenced towards the close of 1833, and continued till the summer of 1834:—

DESCRIPTION.	Average Returns, 1820 to 1823.	Average Returns, 1832 to 1833.
	dollars.	dollars.
Loans.....	40,032,057	63,994,810
Circulation.....	4,625,343	19,451,971
Deposits.....	7,540,293	21,554,591
Coin.....	5,055,517	7,994,935

"The loans in 1830 were 52,274,095 dollars; the circulation 12,924,145 dollars, and the deposits 16,045,782 dollars.

"It was this departure from all sound principles of action, which occasioned the transference of 10,000,000 dollars of deposits from the central bank to the local banks, to be so oppressive in its effects upon the business concerns of the country. It was also a like extension of its loans and issues in 1836 which, in connexion with the like overaction of the local banks, led to the suspension of cash payments in 1837. In 1836, the loans of the United States Bank, with a capital of 35,000,000 dollars, amounted to 59,232,445 dollars, and the circulation to the enormous amount of 23,075,422 dollars, being more than five times as large as the average amount of its issues during Mr. Cheves' administration. The same year, 1836, the banks of the six New England States, with an aggregate capital of 59,471,991 dollars, had in circulation 21,811,762 dollars, and yet her currency was in a redundant state, although, from the great money capital of this section, and the nature of its employments, a larger amount of currency is required to circulate its products, in proportion to its population, than in any other section of the union."

Mr. Gallatin, in his publication of 1841, says:—

"It would be idle to inquire whether, if the charter of that institution (the United States Bank) had been renewed, and if it had been the sole place of deposit of the 40,000,000 dollars of public moneys, the suspension might have been prevented. That would have depended entirely on the manner in which the bank might have been administered.

"That institution had ceased to be a regulator of the currency as early as the years 1832, 1833, when its discounts and other investments were increased from 55,000,000 dollars to 65,000,000 dollars, that is to say, at the rate of eighty-five per cent beyond its

capital; whilst those of the sound banks of our great commercial cities did not exceed the rate of sixty per cent beyond their capital.

"The United States Bank had not only ceased, in 1832 and 1833, to be a regulator of the general currency of the country, as indicated by her excessive issues and excessive loans, but the affairs of that institution were, through most of its career, conducted with less prudence than those of the leading banks in the commercial cities. The existence of that bank was prejudicial in its effects, upon the currencies of all the Atlantic states, and especially upon the currency of Pennsylvania, most of which emanated from the banks of Philadelphia. It threw the business of the banks of that city into disorder, prior to the suspension of 1837, by encouraging an undue extension of their liabilities. It induced them, subsequently to that event, to encourage a continuance of the suspension of 1837, to suspend again in 1839, and to aid the United States Bank in its endeavours to constrain the banks of New York to join in that second act of suspension.

"To the banks of Philadelphia, as well as to the general business concerns of that city, the late United States Bank, both in the early stages of its history as well as in its latter days, has been a source of immense injury. 'Philadelphia,' says Mr. Gallatin, in his last work; 'had a sound capital, greater in proportion to its commerce than that of New York, or of almost any other city in the union; its banks proper were sound and cautiously administered; not one of them had ever failed. But they have for several years been pressed by two great evils—the United States Bank and the state legislature. They have at last got rid of the first burden, from which they ought to have detached themselves long ago.'

"Again, it was said and repeated in thousands of speeches, and other modes of communication with the public, that as the credit of the bank rested upon its connexion with the government, the character of its circulation would become lowered—that it would lose its '*national odour*,' as the phrase ran—its shares decline in value—and consequently it would be rendered powerless, as a regulator of the local currencies, and as the manager of the exchanges.

"That the credit of the bank was not injuriously affected, was manifest from the prices at which its stock was sold after the re-charter. The shares held in this quarter were eagerly purchased by the people of Pennsylvania, at a premium of twenty per cent and upwards. They continued to maintain their value till Mr. Biddle's retirement from the bank, March, 1839, at which time they were current in the Philadelphia and New York stock markets at 116. That high rate was predicted on a continuance of eight per cent dividends, from which it was naturally inferred the affairs of the bank were in a safe and prosperous condition. The shares continued to maintain a high value long after the expiration of its first charter, nor were the issues of the bank under the slightest degree of discredit in consequence of a dissolution of its connexion with the general government. On the other hand, it is well known that the president of the United States Bank and its most intelligent directors entertained, or affected to entertain, as favourable an opinion of the advantages and of the prospects of the institution, as they had previously entertained while acting under a government charter."

Such were the circumstances which deceived the foreign stockholders, as well as others, and which made them continue their shares or stock in the new bank, which they had held in the bank under its old charter. Its credit was kept up on fallacious and deceptive principles, and a thorough investigation of its affairs and of the value of its *bona-fide* assets and capital, would have exhibited its unsound condition. It was afterwards ascertained that its business was conducted with unpardonable want of security.

"The late United States Bank, as the disclosures of its conduct and of its fate have most clearly shown, owes its ruin, not to the violation of its charter by the government, nor to the removal of the public deposits, nor the issue of the specie circular, nor to the political hostility of party men. The primary and operating causes of the mistakes, misdemeanours, misfortunes, losses, and the final destruction of that establishment, may all be traced to a violation of those sound, prudent, and honest principles of banking, currency, and credit, through almost every stage of its existence, which ought to have governed the feelings, opinions, and conduct of its administrators."

"In a country where, owing to the existence of a paper currency of so low a denomination as one dollar, there never can be any considerable amount of specie in circulation; and where also their reserves of coin, when the banks are in their ordinary condition, do not exceed one-sixth or one-seventh the amount of their liabilities. It follows, we repeat, that the only security against sudden commercial pressures of a ruinous severity, succeeded by revulsions and bank suspensions, is for the issuers and managers of the currency to keep down its circulation to a level with the sound currencies of those countries with whom we have commercial interchanges.

"To revert to what Mr. Gallatin has alleged against the United States Bank, for its share in producing the suspension of October, 1839; we do not mean to deny that her operations were more instrumental than those of the local banks, but we have shown that the New England and New York banks were culpable, and so were the banks in all the states. There was an universal disregard to all considerations of prudence on the part of the managers of banks, as regarded the safety and interests of the shareholders, and of the public as recipients and holders of their issues, and of the business community generally as interested in having the circulating medium of the country maintained in that stable and sound condition so essential to their prosperity.

"On the 1st of April, 1839, the foreign debt of the bank,' says Mr. Gallatin, 'amounted to 12,800,000 dollars, and the various stocks owned by it to near 23,000,000 dollars, of which 6,300,000 dollars, consisting principally of *Mississippi and Michigan stocks*, and previously contracted for, were not yet entered on the ledger. Its credit had, indeed, been artificially sustained; and its stock was selling at a considerable advance. It was, nevertheless, on the verge of destruction. In August of the same year, it was compelled to issue post notes, which soon fell to a discount of more than one per cent a month. In September the bank drew largely on Europe without funds, and partly without advice. In order, if possible, to provide funds for that object, and also, as has been acknowledged, for the purpose of breaking the banks of New York, payment of the bills thus sold in that city was suddenly required in specie, and the amount shipped to Europe. The attempt was a failure in both respects:—the banks stood, and the bills were dishonoured. On the 9th of October, the United States Bank suspended its payments, and it is not improper to observe, that a fortnight later another attempt was made under its auspices, by the debtor-interest of New York, to compel the banks to expand their discounts, and thus prepare the way for another general suspension. The banks, as might well be expected, unanimously refused to yield.'

"In the criminations and recriminations, among the parties connected with that ill-managed and ill-fated institution, the facts—discreditable as they are to the persons concerned in the act alleged against the bank by Mr. Gallatin—are admitted to have been correctly stated. In a letter from Mr. Cowperthwaite, cashier of the bank, to Mr. N. Bidle, its former president, there is the following passage:—

"After the feverish excitement consequent on this too speedy effort to return to cash payments (in 1838) had in a good degree subsided, another crisis was anticipated, and it was feared that the banks generally would be obliged again to suspend. This was unhappily too soon to be realised, for the storm was then ready to burst, but instead of meeting its full force at once, it was deemed best to make it fall first upon the banks of New York. To effect this purpose large means were necessary, and to procure these resort was had to the sale of foreign exchange. The state of the accounts of the bank with its agents abroad, did not warrant any larger drafts upon them, especially that of Messrs. Hottinguer in Paris. This difficulty, however, it was thought, might be avoided, by shipping the coin to be drawn from the New York banks immediately to meet the bills. Accordingly large masses of exchange, particularly bills on Paris, which were then in great demand, were sent to New York to be sold without limit. Indeed the bills were signed in blank, and so sent to New York, and although a large book was thus forwarded, it was soon exhausted, and application was made to the agent of the Paris house in New York, for a further supply, who drew a considerable amount besides. The proceeds of these immense sales of exchange created very heavy balances against the New York banks, which after all signally failed in producing the contemplated effect.'

"In Mr. Biddle's comments on Mr. C.'s communication, he thus notices this ingenious plan of regulating the currency and the exchanges:—

"Here, then, is revealed the real and secret causes of the disasters of the bank. Now, without meaning to say a single word about the object of these drafts, and without intending the slightest censure of any one, it is impossible not to see in this single circumstance, the solution of many difficulties of the bank. The bank, as I understand, suddenly draws an immense amount of bills on Messrs. Hottinguer and Company, without having a dollar of funds in their hands—without having any authority to draw for a dollar—without a line of explanation as to the nature and extent of these unexpected drafts—and without even the usual commercial notice that such bills had been drawn. Messrs. Hottinguer and Company could not, as prudent men, do otherwise than protest these bills; and thus the bank, in the very fulness of its credit, was suddenly disgraced in the eyes of all Europe. The talents of Mr. Jaudon repaired, to a certain extent, this disaster,' &c.

"What was the 'disaster' referred to by Mr. Biddle, *without*, as he has told us, *intending to censure, in the slightest degree, any one concerned in the measures which led to it?* Why, according to his own statement, and the confessions of the cashier of the bank, the cause of that *disaster*, as it is termed, was the failure, in part, of a scheme to raise money by dishonest expedients, for the purpose of breaking the New York banks, who were struggling against difficulties and embarrassments, partly arising from the imprudence and misconduct of the United States Bank, that they might fulfil their engagements to the public, as holders of their bills; and what, to the country, was infinitely more important, in order to prevent the monetary concerns of New York and New England, comprising, as those sections probably do, nearly one-half the active capital of the country, from falling into the ruinous and *hopeless* condition of the paper currencies and pecuniary concerns of all the other states of the union.

"Another disastrous event, in the latter stages of the existence of the United States Bank, was the *first resumption* of specie payments. This occurred in New York and New England, in May, 1838, and in Pennsylvania, and most of the other states, in August, 1838. Mr. Cowperthwaite, in explaining to Mr. Biddle the reasons why the bank—which, on the 29th of March, 1839, when the latter gentleman retired from it, '*was strong and prosperous*'—should, in less than two years afterwards, have sunk its entire capital of 35,000,000 dollars—its reserve fund of 4,421,289 dollars—and some 5,000,000 dollars or more in the form of unredeemed circulation and deposits, and of liabilities, for over-advances in Europe on depreciated or worthless securities. Mr. Biddle's successor, Mr. Dunlap, says, 'The utter prostration of the Bank of the United States, passes, I confess, my comprehension! I may, however, point out some of the causes that, in my judgment, have mainly contributed to bring about its painful and humiliating condition. The first cause,' he continues, 'may be traced to the consequences of the *premature resumption* of cash payments, after the first suspension of the banks,' &c."

Notwithstanding the ruin which the failure of the bank of the United States extended over the country, and the suspension or bankruptcy of banks in each state, a desire was soon after manifested for establishing a national bank. On this subject, Mr. Lee remarks:—"That banks as they have been managed—have been among the retarding, and are not to be reckoned among the accelerating, causes of the accumulated wealth of the country. That reasonable proofs are found in treatises and essays of our own writers, that the currency as it has been managed by the banks the last thirty years, has cost the country more money than the whole peace expenditure of the government would probably have amounted to, under a metallic currency, or a mixed currency, so managed as to be subject to no greater fluctuations than are incident to a metallic currency."

The chartering of a national bank soon became a great party question.

Mr. Webster in a speech made to his fellow-townsmen in Boston, admitted that a bank founded upon the principles of the former one, was unattainable and inexpedient. "A bank (said Mr. Webster) founded on private subscriptions, is out of the question. That is an obsolete idea, and people who are working for power to make a bank of the United States, may as well postpone all attempts to benefit the country—to the coming of the Jews."

"It was, however," says Mr. Lee, "under pledges of establishing a bank, that the party to which Mr. Tyler belonged came into power; and he was, as has been maintained, as strongly committed in favour of such an institution, as any of their political leaders."

"The establishment of a national bank was, during the canvass for the presidency, held up by the contending party which prevailed, as of great importance to the welfare of the country, and the obtainment of a charter for one, was considered as one of the expected benefits that would ensue from a change of administration. Such an institution was not only called for by the party in power; but was pretty universally wished for by the mass of the people in all quarters, although many of the party leaders affected to be opposed to a bank, and some of them were sincerely so, in both the great divisions of parties."

"The scheme of a bank presented to congress by Mr. Clay, would, in fact, whatever might be the intentions of its projector, have been a political bank, with the means of extending those corrupting influences over public men, which are already too abounding for the slight resistance likely to be made to temptations held out to *armies of patriotic persons*, who, fancying they were born to be supported by the nation, would think it was unjust if they were not allowed to carry off a large portion of the 50,000,000 dollars, capital, in exchange for their accommodation notes. Such an ordinary banking incident would, however, have been but a slight evil in comparison with the effect of its operations in aiding, as did the late United States bank, the local banks to extend their loans and issues."

"An inflation of currency would have raised the prices of goods; this would have led to over-importations, and to diminished exportations. The result of that state of things would have been another commercial and monetary pressure—caused by a demand for the coin of the banks, to pay up a balance against us for an excess of importations. The banks would have paid out part of their coin, but as that could not have been done without breaking down prices—and consequently embarrassing all the debtor part of the community, and ruining a large portion of them; why, in such an emergency, the banks would have been called upon to suspend."

"From 1833 to 1837, the currency of the country, as we have before shown, was in a constant state of expansion. It was, also, always in excess, as compared with the currencies of other countries. So long as this progress of augmentation continued, all who bought and sold had an opportunity of increasing their nominal wealth, namely—the money value of their property, because the prices of commodities advanced, in a greater or less degree, though not in proportion, as we have before remarked, to the numerical increase of the currency."

"So long as this unnatural abundance of money (currency), and its usual concomitant, an abundant credit, continued, prices of every commodity were high in comparison with the prices of the same commodities prior to the enlargement of the currency. This increase of prices of commodities, as far it arose from an increase of currency, was not an augmentation of value."

We agree with Mr. Lee, for there cannot be a greater fiscal error than confounding price with value.

One of the great moral evils which Mr. Lee exposes with ability in regard to the executive power of the United States, is what is termed "*the democratic principle of the executive*," the proper designation should be the DESPOTIC PRINCIPLE OF ANARCHICAL DEMAGOGISM, namely, the removal, on the accession of a

president, of all men from offices, of every grade, who were appointed by his predecessor; such removal having no justification but mere difference of opinion on political questions. This extends to banking questions and to tariff duties, when such become party questions. In exposing this monstrous bane of honest and intelligent administration, we cannot do so more conclusively than by introducing the opinions of American citizens. Mr. Lee remarks:—

“Now, if any reliance can be placed on information derived from sources common to every one, such a principle, such a *democratic principle*, as is laid down by many of our political leaders, and which the present chief magistrate is acting upon—it is one of those theoretic principles of which the right to exercise is claimed, *in all governments but FREE GOVERNMENTS*—but is nowhere carried into such frequent and full operation as in this democratic Republic. In Turkey such a ‘*democratic principle*’ could hardly be acted upon, with such frequency as among us. In Austria, half of whose revenues are expended in the support of armies and of a military and civil police, for ever at the call and the command of the monarch, it is not, we apprehend, the practice of the government to carry the ‘*democratic principle*’ to the extent which is now done by the democratic head of this Republic, and which has also been done by some of his late predecessors. The soldiers themselves might revolt at what, in *unfree countries*, would be considered as *too arbitrary, and too destructive of the stability and happiness of a nation, under any form of government but a republican government.*

“In France and Great Britain, whose monarchical governments we, of this *enlightened and free country*, hold in such slight political estimation, or in such *democratic abhorrence*, the democratic principle of proscribing and punishing men for opinion’s sake, if carried into such extensive operation as it is deemed right to do in this country, and which it is now deemed expedient to do, *would be denounced and resented by enlightened and reflecting persons of all parties.* The exercise of such an *unjust and demoralizing principle* would, in those two nations, unsettle and overthrow the ablest and most popular administrations that ever held the reins of power. *It was the too free use of the power claimed by our democratic rulers, and exercised by them,* which was among the most effective causes of the overthrow of the French monarchy, and of some of the revolutions which have occurred in our parent country. And as the people of this country are *not, as yet, it is to be hoped, less jealous of those rights which are secured to us, or which were meant to be secured to us, by our constitution, than the subjects of France and England,* there must come a time when we shall show as great a *disapprobation of this principle of despotism as is now shown by these nations; or, failing of that advancement, to a more just appreciation of our rights and our duties than we now have, full into that state of political degradation and moral weakness which might render it impossible for us to maintain the institutions under which we now live, in any tolerable degree of strength and purity.* It would hardly require a succession of many administrations, governed by the principles on which the country has been ruled of late years, and is still ruled, to plunge this too extended a league of nations, poorly qualified, as some of them appear to be, for free institutions, into a state of demoralization and disorganization that would prove fatal to the continuance of the union,—that would prove fatal, not only to the existence of the union, but also to those principles of political morality and of civil government, on which this ill-governed confederacy must hereafter rely for its moral regeneration, and its political re-organization, when it shall be resolved into its several constituent parts, in its rapid advancement to that state of ignorance, corruption, alienation, disunion, and political destruction to which, if we may rely on the teachings of history and of experience, every nation is doomed when, for a long period of time, it has been not under the government of men desirous of promoting the prosperity and welfare of their constituents, but under the domination of a faction, whose personal views and private interests are incompatible with the safety, honour, and happiness of their country.

"In Great Britain and France, a change of ministry involves only a change of the heads of the departments and their chief secretaries. If the principle of removing the numerous subordinates were acted upon, those nations, wealthy and powerful as they are, could not have sustained their political greatness and independence, through the severe trials to which they so often have been exposed. *Experience in the performance of the duties of civil stations, is as essential as it is in the performance of military duties.* Now what chance would there be of succeeding with an army, however numerous it might be, if the principal officers were changed every year or two, and with them a considerable number of the subalterns and a portion of the rank and file, and raw recruits and untaught and inexperienced officers enlisted as substitutes?"

"Look at the moral effect of such a disorganizing and cruel principle—cruel as respects the objects of such unjust treatment. If a due and faithful performance of official duties is no security against political proscription and removal from office, what inducement can men of ability and character have to seek or to accept public employment? or, if engaged in that service, to put forth their utmost ability and exertions to serve their country? *And what has been the effect of this demoralizing principle? Why, the history of the past twenty years exhibits, in the fiscal branch of the public service, a degree of corruption and dishonesty, which, considering the circumstances of the country and the small amount of pecuniary responsibility resting upon the revenue officers—in comparison with what exists in some other countries—is without example in any well-governed nation. It amounts to a very large per centage on the gross receipts of the nation, and it is an item of the public burdens which is rapidly increasing. In case of a war, when it might be necessary to raise three or four times as much money as is done under a peace establishment, the plunder of the public revenue would, of itself, be a heavy burden on the country, and especially if there were a national bank to aid by its influence, and its corrupting power, the needy, reckless, and unprincipled men who, in such an emergency, are as active and dexterous in preying upon their country, as they are in stirring up feelings of hostility against foreign nations with a view of producing wars.* The Florida war cost the country some 30,000,000 or 40,000,000 dollars, only a small proportion of which went to the national troops who defended that territory from invasion; while the balance leaked out of the public purse, and was drained off in some unknown, or in some unlawful direction.

"Will any reflecting man advocate a money-coining machine, under whatever plausible name it may be disguised, whether a 'national bank,' a 'fiscal agent,' or an 'exchequer,' either to be under the direct control of the government, or only connected and influenced by it? Are there not, as the government is now administered, and as it has, for some years, been administered, too many sources of corruption available to a large class of public men, without adding to their number?"

"The object of a national bank, as far as the government has any connexion with it, is to be able to increase the public receipts without hazarding their popularity by taxation—to borrow the people's money to pay the debts of the people—the result of which, according to the financial measures of the present administration, has been to pay one debt by the creation of a still larger one.

"Or, if the 'exchequer plan' of President Tyler had been carried into operation, the effect would have been to throw upon the country a large amount of irredeemable paper money, beginning with 10,000,000, and by an extension of its powers to any sum which may be deemed desirable by this administration or any succeeding administration."—*Letter to Cotton Manufacturers.*

President Tyler in his messages, declares:

"It has now become obvious to all, then, that the government must look to its own means for supplying its wants, and it is consoling to know that those means are altogether adequate for the object. The exchequer, if adopted, will greatly aid in bringing about this result. Upon what I regard as a well-founded supposition, that its bills would be readily sought for by the public creditors, and that the issue would, in a short time,

reach the maximum of 15,000,000 dollars, it is obvious that 10,000,000 dollars would thereby be added to the available means of the treasury without cost or charge.*

"If it were the object of the 'exchequer plan' to keep the 10,000,000 afloat perpetually, as it would appear to be the case, then there would be an accession of 10,000,000 dollars to the public revenue derived from this issue of 10,000,000 dollars of 'assignats, or what may be better understood by the term of 'continental money.'"

Upon the tendency and object of this financial scheme of the executive, Mr. Fillmore, the chairman of ways and means, said in regard to the government "exchequer plan:"—

"As a bank, then, what are to be its probable effects upon the currency of the country? So far as it shall furnish a paper circulation of equal value with gold and silver, it would be beneficial. But, if we are to judge from past experience, this could not be done to any great extent, and would not be maintained for any length of time. All government banking, in all ages and countries, has proved a failure. We believe there is no exception to this rule. To prove this we need not resort to the assignats of France, or the imperial bank of Russia, with its paper rubles, or even the far-famed deposit bank of Amsterdam, which was under the charge of the governors of the city, annually elected by the citizens, and for whose fidelity the city itself was liable. All these, at different times and under different circumstances, had a common end. The assignats, though based upon the avails of large estates which had been confiscated, and made a legal tender by severe penalties, gradually sunk in the market, in consequence of excessive issues, until they became worthless. A similar fate attended the paper rubles of Russia; and the governors of the Bank of Amsterdam, in violation of their official duty and solemn oaths, secretly withdrew the specie that had been deposited in its vaults; and this fraud was not discovered for forty or fifty years. But the attempts in our own country, by different states, to establish banks owned by the states, have been equally unfortunate. Few, if any, have maintained their credit, and the committee believe that there is some

* The first Essay, by Mr. Middleton, was published under the same title as the second—"The Government and the Currency." The following is a paragraph of a criticism on it.

"We have briefly indicated the leading topics considered in this very able pamphlet. But the subject of the currency is now so hopelessly overwhelmed by the cant and vulgar ferocity of party politics, that calm and temperate writing, like this of Mr. Middleton, stands but slight chance of fixing the public attention. Still, the work will do good. It is written in a singularly clear, manly, and elegant style; the arrangement of topics is excellent; the statements are well weighed, and conscientiously made; and no trace of the rampant party spirit, which perverts public opinion to a dreadful and alarming extent, on all questions of national policy, is discernible in its pages. The object aimed at by Mr. Middleton, namely, 'to combine, as far as it is possible to do so, the advantages of the metallic with those of the bank-note system,' is one which ought to be studied by the public men of all parties; but the demagogues have seized upon the subject for their own purposes, and the minds of the people are filled with ignorance, prejudice, and passion, until they are scarcely capable of acting without manifesting an insane violence, by which their real interests are sacrificed."—*North American Review*.

"After what we have now said, we think it must appear that we were fully justified in assuming, as we did in the former part of this essay, that the only portion of the circulation, or medium of exchange, which required legislative interference and regulation, was that which consisted of the bills and notes of banks of issue. We have endeavoured to show that the essential point of difference between the notes of a bank and those of a merchant or trader, consists in this: that the notes of a bank are payable at an indefinite period; while those of a merchant or trader (which constitute mercantile paper) are payable at a period fixed and certain. We have endeavoured, too, to show that this difference between mercantile and bank paper is one of great importance, and leads to important differences in the effects produced by these two descriptions of paper, when left unrestrained by legislative regulation; that while private, or mercantile paper, is, by the necessity which exists for its payment at a given and fixed period, kept within moderate and reasonable limits, bank paper, on the contrary, is tempted constantly to exceed those limits; because, not being payable at any definite and fixed period, no such restraint exists—and the banks issuing such paper, prompted by the desire of gain, naturally seek to increase the amount of their issue, and to keep it from returning upon them for redemption for the longest period possible."—*Government and the Currency*.

inherent and insurmountable difficulty in *government banking*, that cannot be overcome or obviated.

"In the first place, the various officers and agents which would be selected to take charge of such an institution, are not likely to have the requisite financial skill, even if they should have the requisite moral honesty. *They will be selected from party and political considerations. Thus it ever has been, and thus it ever will be.* But, even if they had the skill, they would not feel that solicitude which self-interest alone can create, and which is indispensable to the successful management of a bank.

"But even if these difficulties could be overcome, there is still another which admits of no remedy, and against which you can provide no security; *and that is the dangerous increase in the issues of such paper by legislative authority. It matters not that you limit it by this act—the next Congress has power to change it; and, having the power, if there should be a deficiency in the revenue, it will be exercised.* All experience leads to this inevitable result. It was so in France. It was so in Russia. It was so in this country during the Revolution, when continental money was poured out until it became worthless; and it was so during the last war, when treasury notes were increased until they were twenty or twenty-five per cent below the par value of non-specie paying banks; and, even within a few months after this exchequer plan was first recommended to Congress, in a time of profound peace, treasury notes were issued until they fell five per cent below par, and the credit of the treasury was, at last, only saved by promising to pay six per cent interest on these notes semi-annually, which converted them at once from currency, receivable in public dues, into a species of stock for investment. Even we could not sell a six per cent stock, having twenty years to run, without a discount to meet these notes; and had they been issued under this exchequer, the result must have been the same. All these facts lead to but one conclusion, and that seems irresistible; which is, that the government ought not to engage in banking, but that that should be left to private corporations or companies, which may be effectually restrained in their issues by penal laws, for the violation of which they may be made amenable to the courts. Certainly nothing short of this can prevent excessive issues, or insure prompt redemption; and even this has not always effected that object."

Thus much Mr. Fillmore has alleged against the scheme of President Tyler, upon its economical defects.

We have not adduced these remarks for the purpose of proposing a system of banking, but to exhibit the evils of fallacious currencies, and to show what has been done, and what exists—what has been, and what is proposed as remedies for these evils, regarding the currency of the United States.

Mr. Lee observes:—

"That a central bank with a large capital, might be useful in restraining the over-issues and over-loans of the local banks, we have never doubted, provided it should be placed under the government of persons who had the skill, the honesty, and the courage, to manage it upon strict conservative principles—somewhat on the plan of the Bank of France. Such an institution would not answer the purposes which a large majority of those influential persons have in view, who are the most desirous of its creation. If, however, its founders and promoters were sincerely desirous of having it conducted upon strict and honest banking principles, they would not be encouraged and sustained by the nation, nor even by the persons who should be appointed by its proprietors, to govern it; or more commonly those *self-appointed persons*—who, upon the principles on which all our banks are organised, have an interest adverse to the interests of their constituents as stockholders, and to the public as recipients of their paper issues.

We do not find any grave, intelligent, and thinking writer, or speaker, deny that the banking system, or rather banking practice, of the United States has caused the most extensive and often ruinous speculations, whether in the sales

and purchases of lands (*See Public Lands* hereafter), in shares or stocks of public works and companies, of loss to cotton planters, and to cotton, and other manufacturers,—to the holders of bank stock,—and to the general credit of the United States.

Mr. Alexander Hamilton, whose upright mind ranks him next to Washington, among the men of whom America may, with justice and without vanity, be proud, has recorded the following opinion, which American statesmen, if they bear any love for their country, would act wisely, by observing as a regulating maxim in fiscal legislation:—

“The emitting of paper money is wisely prohibited to the state governments, and the spirit of the prohibition ought not to be disregarded by the United States government. Though paper emissions, under a general authority, might have some advantages not applicable, and be free from some disadvantages which are applicable, to the like emissions by the states, separately, yet they are of a nature so liable to abuse—and it may even be affirmed, *so certain of being abused*—that the wisdom of government will be shown in never trusting itself with the use of so seducing and dangerous an expedient. In times of tranquillity it might have no ill consequences; it might even, perhaps, be arranged in a way to be productive of good; *but in great and trying emergencies there is almost a moral certainty of its being mischievous.*”

In a speech made by Mr. Webster, while a member of Congress, in 1815, upon a bill to incorporate a bank of the United States, differing in many respects from the bill for the establishment of an exchequer, but involving some of the most important principles of that bill, we find the following passages. The main purpose of the bill was to establish a bank whose capital should consist partly of coin and partly of government stocks and treasury notes. The capital of the proposed exchequer was to consist of coin and treasury notes:—

“I am sure, sir, that the advantages which would at present result from any bank, are greatly overrated. To look to a bank as a source capable, not only of affording a circulating medium to the country, but also of supplying the ways and means of carrying on the war, especially at a time when the country is without commerce, is to expect much more than will ever be obtained. Such high wrought hopes can only end in disappointment. The means of supporting an expensive war are not of quite so easy acquisition. Banks are not revenue. They cannot supply its place. They may afford facilities to its collection and distribution. They may furnish, with convenience, temporary loans to government, in anticipation of its taxes, and render important assistance, in divers ways, to the general operations of finance. They are useful to the state in their proper place and sphere, but they are not sources of national income.

“The fountains of revenue must be sunk deeper. The credit and circulation of bank paper are the effects, rather than the causes, of a profitable commerce, and a well ordered system of finance. They are the props of national wealth and prosperity, not the foundations of them. Whoever shall attempt to restore the fallen credit of this country, by the creating of new banks, merely that they may create new paper; and that government may have a chance of borrowing where it has not borrowed before, will find himself miserably deceived. It is under the influence of no such vain hopes, that I yield my assent to the establishment of a bank, on sound and proper principles.”

The following statement and tables (which exhibit a condensed historical view of the American currency for more than a quarter of a century), were prepared by Mr. Gouge, editor of the “*Journal of Banking*,” author of “*A Short*

History of Paper Money and Banking," and formerly of the United States treasury department:—

"On the 30th of August, 1814, the Philadelphia banks suspended specie payments for the *first time*, and the other banks in the middle and southern states within a week or two of that date. The New Orleans banks had suspended payment in the April previous; but the banks of Kentucky and Ohio continued to pay specie till about the 1st of January, 1815; and the only bank then in Tennessee did not suspend payment till July or August, 1815. Through the whole of this, the *first* general suspension of specie payments, the banks of New England continued to pay specie, with the exception of a few banks in Maine that stopped payment early in 1814.

"During the first suspension of specie payments, the notes of non-specie-paying banks were received in payment of public dues.

"On the 1st of January, 1817, the bank of the United States commenced operations at Philadelphia. Of the effect it had in "regulating the currency," the reader can judge for himself. The table gives the prices of western and southern bank notes at Philadelphia, in that and each subsequent year.

"On the 21st of February, 1817, the United States government refused any longer to receive the notes of non-specie-paying banks in payment of public dues.

"In 1824, the system known as the Suffolk Bank system was adopted in New England. The reader, on scanning the table, will not fail to be struck with the *uniformity* of value which the notes of the many hundred banks of the eastern states have since maintained, and this whether the banks have sustained or suspended specie payments.

"On the 11th of May, 1837, the New York and Natchez banks suspended specie payments; and as fast as the news spread from these two cities, east, west, north, and south, the other banks suspended also. In this, the *second* general suspension of specie payments, the banks of New England were included.

"In one year afterwards, or in May, 1838, the New York banks resumed specie payments, and their conduct was immediately followed by the banks of New England. These banks have since (with the exception of the banks of Rhode Island) steadily maintained specie payments.

"In August, 1838, the banks of Philadelphia professed to resume specie payments; and by the 1st of January, 1839, there was at least a *nominal* resumption of specie payments throughout the union.

"In a little more than a year, or on the 9th of October, 1839, the banks of Philadelphia suspended specie payments for the *third* time, and their example was quickly imitated by all the banks to the south and west, and also by the banks of West Jersey and Rhode Island. The bank of Missouri did not, indeed, suspend payment on its own notes; but as it traded on the notes of other western banks, it became an issuer of inconvertible paper. The banks of Rhode Island soon resumed specie payments. The banks of South Carolina resumed specie payments in June or July, 1840. All the other banks to the south and west of New York (with the exception of the East Jersey banks, and a few others scattered in different places) continued to refuse payment of specie on demand.

"January 15th, 1841, the banks of Philadelphia resumed specie payments, and sustained them for about twenty days, or until the 4th of February. They then, for the *fourth* time, suspended specie payments; until the 18th and 19th of March, 1842.

A TABLE showing the highest and lowest Prices (comparatively) of Bank Notes at Philadelphia, in each Year, from October 31st, 1814, to December 31st, 1841.

[In this table, *p* stands for premium; *d* for discount; *a* is an abbreviation of the Latin *ad*, to.]

"In the states of Louisiana, Mississippi, and Alabama, three of the most fertile ones in the union, the aggregate amount of bank capital, according to the returns of 1839, was 84,112,504 dollars. There are no returns of the present condition of the banks in those states, published by the treasury department, as in preceding years, but, from such

statements as have been published, it would appear that the aggregate amount of bank capital in these three states is now something less than 23,000,000 dollars. This is its nominal value, but from the quality of the securities in which it is invested, the proprietors of the shares might not be able to realise more than half the sum stated were the concerns of these banks brought to a settlement. In the states of Illinois, Michigan, and Arkansas, and in the Florida territory, the banking results descend still nearer to the point of annihilation than in the instances just cited.

"A reference to the return of the aggregate bank capital of the country affords further evidence of the enormous extent of the losses from banking to which the shareholders have been subjected. At the close of 1839, the entire bank capital was 358,442,692 dollars. Since that period, and down to this time (November, 1843), considerable sums have been withdrawn by the closing up of concerns which had not lost all their capital. On the other hand, much larger additions have been made by the creation of a considerable number of new banks; to a greater extent in the state of New York than elsewhere, since, under what is termed the 'free banking system,' *every individual who has any property can become a money-coiner by pledging it to the state government, and, consequently, every individual is strongly tempted to become a creator of paper money for the chance of gaining a profit on the amount which can be kept in circulation.*

Free Banking System of New York.—"It is impossible that a system of banking like the one now in operation in New York, which holds out such strong inducements to over-issuing and over-lending, should not, sooner or later, be productive of injurious consequences to the community generally, and especially so to the trading portion of it. Under the free banking laws of that state, the comptroller is required to deliver bank-notes to any individuals for the purpose of being thrown into circulation to any extent which may be asked for upon a corresponding amount of state stocks or mortgages being deposited with him as security for redemption.

"In the enactment of this law, 'the only object,' says Mr. Gallatin, 'which seems to have attracted the attention of the legislature, is not the danger of suspension, but the ultimate redemption of the notes put in circulation.' That object has not, however, always, nor generally, been accomplished. In the numerous instances of failures of the free banks, the securities deposited for the redemption of their issues have been found insufficient for that purpose. This has been one source of loss to the bill-holders, while the long period usually required for the conversion of real estate and stocks into money is another source of injury, since most of the persons in whose hands the issues of failed banks usually remain are constrained, by their urgent wants, to sell them at a great loss to those who have the means of purchasing them on speculation.

"One of the reasons urged in favour of permitting every individual in a state to become an issuer of paper money was the superior safety of state stocks and mortgages, as a basis on which to found a paper circulation. In respect to state stocks, it may be observed, that the great mass which have been issued are considerably below par, and no inconsiderable portion have fallen fifty per cent below the par rate, and from thence to nearly the point of annihilation; while the solid ones are all in the hands of men who are not inclined to part with them on any terms to free bankers.

"A reliance on a steady and permanent value of real estate has proved to have been equally unsafe. Take, for instance, real property in the city of New York, which is the most wealthy one in the country, and has made the greatest advancement in business and population, and, consequently, it might reasonably be concluded, that real estate would there maintain its value if anywhere. A reference to the official returns of the assessed value of real estate in the city of New York, gives the following results:—

Y E A R S.	Dollars.
1833.....	114,129,561
1835.....	143,732,425
1836.....	233,742,303
1839.....	196,778,434
1842.....	176,489,042

"In 1836, the population was estimated at about 280,000,000; in 1840, it was, by

an enumeration, found to be 312,710,000; and, in 1842, it was estimated at 350,000,000. There had been erected, between the years 1836 and 1842, for the accommodation of this additional population, a suitable number of dwellings, warehouses, and public buildings, and, generally speaking, of a quality superior to any class of buildings which previously existed. There should, then, be added to the valuation of 1836, twenty-five per cent, that being the ratio of increase of population. According to that estimate, the return of real estate in New York city, in 1842, should have been 233,742,303 dollars, with twenty-five per cent superadded for an increase since 1836 making the amount in 1842, 292,177,879 dollars.

"The actual decline, then, in the value of real estate in New York, between 1836 and 1842 is 115,688,837 dollars, being the difference between what the returns actually were in 1842, and what they would have been, had the prices of 1836 been maintained. It may, perhaps, be imagined that the valuation in 1842 was unnaturally low in consequence of the depression in business and other causes of temporary duration. There might be some reason for such a conjecture, were not the contrary shown to be the case by a subsequent decline in prices of real estate, as will be seen by the returns of 1843, when they are laid before the public.*"
